embracing the reality of biophysical limits to growth this volume uses the technical tools from ecological economics to recast the sustainable development goals sdgs as ecological livelihood goals policy agendas and trajectories that seek to reconcile the social and spatial mobility and liberty of individuals with both material security and ecological integrity since the 1970s mainstream approaches to sustainable development have sought to reconcile ecological constraints with modernization through much vaunted and seldom demonstrated strategies of decoupling and dematerialization in this context the un sdgs have become the orchestrating drivers of sustainability governance however biophysical limits are not so easily sidestepped building on an ecological economic critique of mainstream economics and a historical sociological understanding of state formation this book explores the implications of ecological limits for modern progressive politics each chapter outlines leverage points for municipal engagement in local and regional contexts systems theory and community development perspectives are used to explore under appreciated avenues for the kind of social and cultural change that would be necessary for any accommodation between modernity and ecological limits drawing on ideas from h t odum herman daly zigmunt bauman and many others this book provides guiding research for a convergence between north and south that is

bottom up household centred and predicated on a re emerging domain of livelihood in each chapter the authors provide recommendations for reconfiguring the un s sdgs as ecological livelihood goals a framework for sustainable development in an era of limits this book will be of great interest to students and scholars of ecological economics socio ecological systems political economy international and community development global governance and sustainable development
