P-graphs for Process Systems Engineering

2022-02-03

this book discusses the p graph framework for developing and understanding effective design tools for process systems engineering and addresses the current state of its theory and applications the book details the new philosophy of the axioms based mathematical modelling of processing systems the basic algorithms areas of application future directions and the proofs of theorems and algorithms because of the rigorous foundation of the theory the framework provides a firm basis for future research in mathematical modelling optimization and design of complex engineering systems the various p graph applications discussed include process network synthesis reliability engineering and systems resilience the framework opens new avenues for research in complex systems including redundant operations for critical infrastructure systems sustainability and modelling tools for disaster engineering demonstration software is provided to facilitate the understanding of the theory the book will be of interest to institutions companies and individuals performing research and r d in process systems engineering

The P-Adic Simpson Correspondence and Hodge-Tate Local Systems

2024

this book delves into the p adic simpson correspondence its construction and development offering fresh and innovative perspectives on this important topic in algebraic geometry the text serves a dual purpose it describes an important tool in p adic hodge theory which has recently attracted significant interest and also provides a comprehensive resource for researchers unique among the books in the existing literature in this field it combines theoretical advances novel constructions and connections to hodge tate local systems this exposition builds upon the foundation laid by faltings the collaborative efforts of the two authors with t tsuji and contributions from other researchers faltings initiated in 2005 a p adic analogue of the complex simpson correspondence whose construction has been taken up in several different ways following the approach they initiated with t tsuji the authors develop new features of the p adic simpson correspondence inspired by their construction of the relative hodge tate spectral sequence first they address the connection to hodge tate local systems then they establish the functoriality of the p adic simpson correspondence by proper direct image along the way they expand the scope of their original construction the book targets a specialist audience interested in the intricate world of p adic hodge theory and its applications algebraic geometry and related areas graduate students can use it as a reference or for in depth study mathematicians exploring connections between complex and p adic geometry will also find it valuable

IBM System i and System p System Planning and Deployment: Simplifying Logical Partitioning

2007-08-08

logical partitioning lpar provides the significant capability to run multiple operating systems each a partition on the same physical processor memory and i o attachment configuration lpar is often discussed along with the concept of server consolidation lpar enables management across a single set of hardware and when configured and managed correctly can maximize efficient use of hardware resources all in a single place often using resources in one partition when not needed by another partition by its nature lpar is powerful but as the number and complexity of applications being run in each partition increases can become complex to configure and to achieve anticipated performance expectations this ibm redbooks publication describes and provides examples of using the 2007 enhancements to the system planning and deployment tools and processes for planning ordering and deploying a partitioned environment on ibm system i and ibm system p configurations the objective is to help you order and ibm deliver a hardware configuration and get that configuration up and running your planned partition configurations with good performance in as short a time as possible this book and the tools and processes involved represent the next step in expediting this entire process while still requiring sound knowledge of ibm system i and system p hardware processor and i o capabilities for success

WIS:dom®-P v9.0 Weather-Informed energy Systems: for design, operations and markets (Planning Version)

2020-08-01

the wis dom weather informed energy systems for design operations and markets optimization planning model is the state of the art energy model developed by vibrant clean energy llc vce it is the first commercial co optimization model of energy grids that was built from the ground up to incorporate vast volumes of data starting with high resolution weather and demand data wis dom p simultaneously co optimizes the capacity expansion requirements generation transmission and storage and the dispatch requirements production cost power flow reserves ramping and reliability for the entire electric energy grid of interest not only does wis dom co optimize these critically linked properties it was developed from the ground up to work with big data the model can determine the cost benefit ratios for new hvdc transmission lines compared with other technologies it can also determine the risk and rewards from retiring existing generators for the topology of the transmission infrastructure simultaneously to determining how more variable generation is deployed to replace them wis dom utilizes high resolution spatially and temporally weather data to determine resource properties over vast spatial temporal horizons thus wis dom can be used on scales as small as campuses cities counties or states provinces but uniquely can also be used for sovereign entities and continents moreover these scales can be nested allowing high fidelity local modeling accompanied with lower fidelity larger areas to create feedbacks within the model that simulate outside influences on local markets the model relies on publically available data where possible and contains default values for generators transmission storage production cost and resource siting however wis dom was designed from the beginning to allow plug and play capability whereby it can take advantage of customized datasets required for detailed modeling of specific questions markets or balancing areas for example higher resolution weather data over a utility or iso or proprietary heat rates for generators within a utility the modeling framework is unique and consistent across various scales facilitating more transparent analysis between results derived with wis dom new opportunities are identified due to the co optimization detecting patterns ignored by other modeling endeavors the wis dom optimization model allows datasets to be added for specific local interests for example wis dom can be deployed for any country or continent around the globe the model requires the local datasets or uses the default global one and then can study various questions of interest such as greenhouse gas emission hvdc transmission links variable generation and reliability water consumption air pollution electric vehicle penetrations electric heating jobs and tax revenues and more

Linear Systems Theory

2018-02-13

a fully updated textbook on linear systems theory linear systems theory is the cornerstone of control theory and a well established discipline that focuses on linear differential equations from the perspective of control and estimation this updated second edition of linear systems theory covers the subject s key topics in a unique lecture style format making the book easy to use for instructors and students joão hespanha looks at system representation stability controllability and state feedback observability and state estimation and realization theory he provides the background for advanced modern control design techniques and feedback linearization and examines advanced foundational topics such as multivariable poles and zeros and lqg lqr the textbook presents only the most essential mathematical derivations and places comments discussion and terminology in sidebars so that readers can follow the core material easily and without distraction annotated proofs with sidebars explain the techniques of proof construction including contradiction contraposition cycles of implications to prove equivalence and the difference between necessity and sufficiency annotated theoretical developments also use sidebars to discuss relevant commands available in matlab allowing students to understand these tools this second edition contains a large number of new practice exercises with solutions based on typical problems these exercises guide students to succinct and precise answers helping to clarify issues and consolidate knowledge the book s balanced chapters can each be covered in approximately two hours of lecture time simplifying course planning and student review easy to use textbook in unique lecture style format sidebars explain topics in further detail annotated proofs and discussions of matlab commands balanced chapters can each be taught in two hours of course lecture new practice exercises with solutions included

Text-book to the Turret-and Tripod Systems of Captain Cowper P. Coles, as Designed for Future Turret Navies, by C. F. Henwood

1867

the novartis foundation series is a popular collection of the proceedings from novartis foundation symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results the novartis foundation originally known as the ciba foundation is well known to scientists and clinicians around the world

Substance P in the Nervous system

2009-09-14

advances in cytochrome p 450 enzyme system research and application 2011 edition is a scholarlybrief that delivers timely authoritative comprehensive and specialized information about cytochrome p 450 enzyme system in a concise format the editors have built advances in cytochrome p 450 enzyme system research and application 2011 edition on the vast information databases of scholarlynews you can expect the information about cytochrome p 450 enzyme system in this ebook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant the content of advances in cytochrome p 450 enzyme system research and application 2011 edition has been produced by the world s leading scientists engineers analysts research institutions and companies all of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at scholarlyeditions and available exclusively from us you now have a source you can cite with authority confidence and credibility more information is available at scholarlyeditions com

Advances in Cytochrome P-450 Enzyme System Research and Application: 2011 Edition

2012-01-09

this book is a venture in the worlds of modeling and of metamodeling at this point i will not reveal to readers what constitutes metamodeling suf fice it to say that the pitfalls and shortcomings of modeling can be cured only if we resort to a higher level of inquiry called metainquiry and metadesign we reach this level by the process of abstraction the book contains five chapters from my previous work applied general systems theory harper and row london and new york first edition 1974 second edition 1978 more than ten years after its publication this material still appears relevant to the main thrust of system design this book is dedicated to all those who are involved in changing the world for the better in a way we all are involved in system design from the city manager who struggles with the problems of mass transportation or the consolidation of a city and its suburbs to the social worker who tries to provide benefits to the urban poor it includes the engineer who designs the shuttle rockets it involves the politician engaged in drafting a bill to recycle containers or one to prevent pesticide contamination of our food the politician might even need system design to chart his or her own re election campaign

System Design Modeling and Metamodeling

1991-07-31

explains fault tolerance in clear terms with concrete examples drawn from real world settings highly practical focus aimed at building mission critical networked applications that remain secure

A System of Moral Science by Laurens P Hickok

1853

the increased computational power and software tools available to engineers have increased the use and dependence on modeling and computer simulation throughout the design process these tools have given engineers the capability of designing highly complex systems and computer architectures that were previously unthinkable every complex design project from integrated circuits to aerospace vehicles to industrial manufacturing processes requires these new methods this book fulfills the essential need of system and control engineers at all levels in understanding modeling and simulation this book written as a true text reference has become a standard sr graduate level course in all ee departments worldwide and all professionals in this area are required to update their skills the book provides a rigorous mathematical foundation for modeling and computer simulation it provides a comprehensive framework for modeling and simulation integrating the various simulation approaches it covers model formulation simulation model execution and the model building process with its key activities model abstraction and model simplification as well as the organization of model libraries emphasis of the book is in particular in integrating discrete event and continuous modeling approaches as well as a new approach for discrete event simulation of continuous processes the book also discusses simulation execution on parallel and distributed machines and concepts for simulation model realization based on the high level architecture hla standard of the department of defense presents a working foundation necessary for compliance with high level architecture hla standards provides a comprehensive framework for continuous and discrete event modeling and simulation explores the mathematical foundation of simulation modeling discusses system morphisms for model abstraction and simplification presents a new approach to discrete event simulation of continuous processes includes parallel and distributed simulation of discrete event models presents a concept to achieve simulator interoperability in the form of the devs bus

Reliable Distributed Systems

2005-03-25

in a scholarly edition of samuel p newman s a practical system of rhetoric beth l hewett argues that newman and his successful nineteenth century textbook should be evaluated within the era s educational culture and goals thus establishing their value in rhetorical history

Theory of Modeling and Simulation

2000-01-10

this revised reprint of our 8th edition the gold standard in community health nursing public health nursing population centered health care in the community has been updated with a new quality and safety education in nursing qsen appendix that features examples of incorporating knowledge skills and attitudes to improve quality and safety in community public health nursing practice as with the previous version this text provides comprehensive and up to date content to keep you at the forefront of the ever changing community health climate and prepare you for an effective nursing career in addition to concepts and interventions for individuals families and communities this text also incorporates real life applications of the public nurse s role healthy people 2020 initiatives new chapters on forensics and genomics plus timely coverage of disaster management and important client populations such as pregnant teens the homeless immigrants and more evidence based practice boxes illustrate how the latest research findings apply to public community health nursing separate chapters on disease outbreak investigation and disaster management describe the nurse s role in

surveilling public health and managing these types of threats to public health separate unit on the public community health nurse s role describes the different functions of the public community health nurse within the community levels of prevention boxes show how community public health nurses deliver health care interventions at the primary secondary and tertiary levels of prevention what do you think did you know and how to boxes use practical examples and critical thinking exercises to illustrate chapter content the cutting edge highlights significant issues and new approaches to community oriented nursing practice practice application provides case studies with critical thinking questions separate chapters on community health initiatives thoroughly describe different approaches to promoting health among populations appendixes offer additional resources and key information such as screening and assessment tools and clinical practice guidelines new quality and safety education in nursing qsen appendix features examples of incorporating knowledge skills and attitudes to improve quality and safety in community public health nursing practice new linking content to practice boxes provide real life applications for chapter content new healthy people 2020 feature boxes highlight the goals and objectives for promoting health and wellness over the next decade new forensic nursing in the community chapter focuses on the unique role of forensic nurses in public health and safety interpersonal violence mass violence and disasters new genomics in public health nursing chapter includes a history of genetics and genomics and their impact on public community health nursing care

A Scholarly Edition of Samuel P. Newman's A Practical System of Rhetoric

2020-11-23

the main purpose of developing stability theory is to examine dynamic responses of a system to disturbances as the time approaches infinity it has been and still is the object of intense investigations due to its intrinsic interest and its relevance to all practical systems in engineering finance natural science and social science this monograph provides some state of the art expositions of major advances in fundamental stability theories and methods for dynamic systems of ode and dde types and in limit cycle normal form and hopf bifurcation control of nonlinear dynamic systems presents comprehensive theory and methodology of stability analysis can be used as textbook for graduate students in applied mathematics mechanics control theory theoretical physics mathematical biology information theory scientific computation serves as a comprehensive handbook of stability theory for practicing aerospace control mechanical structural naval and civil engineers

An Atlas for the P-code System of MMPI Interpretation

1976

this easy to follow textbook provides an exercise driven guide to the use of the discrete event systems specification devs simulation modeling formalism and the system entity structure ses simulation model ontology supported with the latest advances in software architecture and design principles methods and tools for building and testing virtual systems of systems sos the book examines a wide variety of sos problems ranging from cloud computing systems to biological systems in agricultural food crops this enhanced and expanded second edition also features a new chapter on devs support for markov modeling and simulation topics and features provides an extensive set of exercises throughout the text to reinforce the concepts and encourage use of the tools supported by introduction and summary sections discusses how the sos concept and supporting virtual build and test environments can overcome the limitations of current approaches offers a step by step introduction to the devs concepts and modeling environment features required to build sophisticated sos models describes the capabilities and use of the tools cosmos devs suite virtual laboratory environment and ms4 metm reviews a range of diverse applications from the development of new satellite design and launch technologies to surveillance and control in animal epidemiology examines software hardware co design for sos and activity concepts that bridge information level requirements and energy consumption in the implementation demonstrates how the devs formalism supports markov modeling within an advanced modeling and simulation environment new this accessible and hands on textbook reference provides invaluable practical guidance for graduate students interested in simulation software development and cyber systems engineering design as well as for practitioners in these and related areas

U. S. Commissioner System: October 13, 1965. 41 p

1965

principles and applications of distributed event based systems showcases event based systems in real world applications containing expert international contributions this advanced publication provides professionals researchers and students in systems design with a rich compendium of latest applications in the field

Coastal Barrier Resources System Map Correction--Captiva Island Unit, P19-P

2000

this monograph provides an overview of the recent developments in modern control systems including new theoretical findings and successful examples of practical implementation of the control theory in different areas of industrial and special applications recent developments in automatic control systems consists of extended versions of selected papers presented at the xxvi international conference on automatic control automation 2020 october 13 15 2020 kyiv ukraine which is the main ukrainian control conference organized by the ukrainian association on automatic control national member organization of ifac and the national technical university of ukraine igor sikorsky kyiv polytechnic institute this is the third monograph in the river publishers series in automation control and robotics based on the selected papers of the ukrainian control conferences automation in particular the first monograph control systems theory and applications 2018 was published based on automation 2017 and the second monograph advanced control systems theory and applications was based on automation 2018 the monograph is divided into three main parts a advances in theoretical research of control systems b advances in control systems application c recent developments in collaborative automation the chapters have been structured to provide an easy to follow introduction to the topics that are addressed including the most relevant references so that anyone interested in this field can get started in the area this book may be useful for researchers and students who are interesting in recent developments in modern control systems robust adaptive systems optimal control fuzzy control motion control identification modelling differential games evolutionary optimization reliability control security control intelligent robotics and cyber physical systems

Public Health Nursing - Revised Reprint

2013-10-15

linear time varying approximations to nonlinear dynamical systems introduces a new technique for analysing and controlling nonlinear systems this method is general and requires only very mild conditions on the system nonlinearities setting it apart from other techniques such as those well known based on differential geometry the authors cover many aspects of nonlinear systems including stability theory control design and extensions to distributed parameter systems many of the classical and modern control design methods which can be applied to linear time varying systems can be extended to nonlinear systems by this technique the implementation of the control is therefore simple and can be done with well established classical methods many aspects of nonlinear systems such as spectral theory which is important for the generalisation of frequency domain methods can be approached by this method

Stability of Dynamical Systems

2007-08-01

top researchers in optimization and control from around the world gathered in detroit for the 18th annual ifip tc7 conference on systems modelling and optimization held in july 1997 the papers presented in this volume were carefully selected from among the 250 plenary invited and contributed works presented at the conference the editors chose these papers to represent the myriad and diverse range of topics within the field and to disseminate important new results it includes recent results on a broad variety of modelling and control applications particularly automotive modelling and control along with recent theoretical advances

Guide to Modeling and Simulation of Systems of Systems

2018-05-18

analytical planning the organization of systems deals with systems and planning and suggests a methodological tool for integrating the two this book presents the basic ideas behind complexity systems hierarchies and prioritization and describes planning as a unique form of decision making with illustrations of some prominent philosophical and methodological approaches it highlights some shortcomings of traditional approaches to planning and shows how these can be addressed by the systems approach

Management Systems

1985-01-01

descriptors continued fractions e qu ion p r urb tion t eory green s function differe tial equations a problem of continuing interest is that of obtaining approximate solutions of the functional equation l u a p lambda b p u 0 where l is a linear transformation in terms of the solution of the unperturbed equation l u a p u 0 u ing the green s function or equival techni u s n reg rdi g the term involving lambda as a forcing term we can convert the first equation to the form u f lambda t u where t is a linear transformation we pr ent a new approach to problems of this nature using the classical technique of continued fractions author

Monthly Catalog of United States Government Publications

1980

this new book on systems management discusses important concerns for the development of systems from the perspective of information technology information systems and software systems engineering it focuses on the systems management process for information technology and software development organizations

Principles and Applications of Distributed Event-Based Systems

2010-06-30

this book is written with the ideology of providing a simple yet concise explanation on the art of developing mathematical models this lively and engaging text explicates the basics of mathematical modelling with special focus on its applications and analysis organised in thirteen chapters the book emphasises the theory and classification of systems modelling using ordinary differential equations calculus of variations stability analysis system identification and parameter estimation techniques also it includes examples from the areas of mechanics chemical reactions biology population dynamics epidemiology and other allied fields of science engineering and technology this book is primarily designed for the postgraduate students of mathematics as well as for the undergraduate and postgraduate engineering students of various disciplines for their paper on modelling and simulation mathematical modelling and simulation mathematical modelling key features inclusion of entropy based modelling modelling using fractional order odes and artificial intelligence along with stability and catastrophe theory is the major highlight of this book figures and tables well support the text numerous worked out examples make the students aware of problem solving methodology chapter end exercises help the students from practice point of view references and suggested reading at the end of the book broaden its scope

Recent Developments in Automatic Control Systems

2023-01-30

focus in this book is placed on systems engineering and systems management for building systems of all types the role of these systems to produce high reliability and quality services and products is stressed the role of advanced information technologies in enhancing productivity and quality is also discussed

Linear, Time-varying Approximations to Nonlinear Dynamical Systems

2010-02-04

the only comprehensive guide to kalman filtering and its applications to real world gps ins problems written by recognized authorities in the field this book provides engineers computer scientists and others with a working familiarity with the theory and contemporary applications of global positioning systems gps inertial navigational systems and kalman filters throughout the focus is on solving real world problems with an emphasis on the effective use of state of the art integration techniques for those systems especially the application of kalman filtering to that end the authors explore the various subtleties common failures and inherent limitations of the theory as it applies to real world situations and provide numerous detailed application examples and practice problems including gps aided ins modeling of gyros and accelerometers and waas and laas drawing upon their many years of experience with gps ins and the kalman filter the authors present numerous design and implementation techniques not found in other professional references including original techniques for representing the problem in a mathematical model analyzing the performance of the gps sensor as a function of model parameters implementing the mechanization equations in numerically stable algorithms assessing computation requirements testing the validity of results monitoring gps ins and kalman filter performance in operation in order to enhance comprehension of the subjects covered the authors have included software in matlab demonstrating the workings of the gps ins and filter algorithms in addition to showing the kalman filter in action the software also demonstrates various practical aspects of finite word length arithmetic and the need for alternative algorithms to preserve result accuracy

Systems Modelling and Optimization Proceedings of the 18th IFIP TC7 Conference
