Standard for Composite Steel Deck

1988

the book presents recently developed efficient metaheuristic optimization algorithms and their applications for solving various optimization problems in civil engineering the concepts can also be used for optimizing problems in mechanical and electrical engineering

focusing on fundamental principles hydro environmental analysis freshwater environments presents in depth information about freshwater environments and how they are influenced by regulation it provides a holistic approach exploring the factors that impact water quality and quantity and the regulations policy and management methods that are necessary to maintain this vital resource it offers a historical viewpoint as well as an overview and foundation of the physical chemical and biological characteristics affecting the management of freshwater environments the book concentrates on broad and general concepts providing an interdisciplinary foundation the author covers the methods of measurement and classification chemical physical and biological characteristics indicators of ecological health and management and restoration he also considers common indicators of environmental health characteristics and operations of regulatory control structures applicable laws and regulations and restoration methods the text delves into rivers and streams in the first half and lakes and reservoirs in the second half each section centers on the characteristics of those systems and methods of classification and then moves on to discuss the physical chemical and biological characteristics of each in the section on lakes and reservoirs it examines the characteristics and operations of

regulatory structures and presents the methods commonly used to assess the environmental health or integrity of these water bodies it also introduces considerations for restoration and presents two unique aquatic environments wetlands and reservoir tailwaters written from an engineering perspective the book is an ideal introduction to the aquatic and limnological sciences for students of environmental science as well as students of environmental engineering it also serves as a reference for engineers and scientists involved in the management regulation or restoration of freshwater environments

1896

this book deals with modern computer aided design cad software tools and platforms implemented in ship design the integration of techno economic databases the use of optimisation and simulation software tools which are integrated in these platforms and the virtual modelling of ships and their operation by using a virtual vessel framework vvf it contains a series of application case studies related to the developed holistic approach to ship design and operation nine case studies are described referring to the design and operation of various ship types namely ropax cruise ship double ended ferry bulk carrier containership offshore support vessel

ocean surveillance ship and research vessel and one offshore structure all case studies are driven by leading representatives of the european maritime industry this book complements a holistic approach to ship design volume 1 which covers methods and tools for the life cycle optimisation and assessment of ship design and operation

Applications of Metaheuristic Optimization Algorithms in Civil Engineering

2016-11-30

paved roads public money describes the evolution of transportation systems in modern connecticut it is the second book in a two volume study that begins with the bicycle craze of the 1880s and ends with the efforts of the malloy and lamont administrations to revitalize connecticut transportation in the twenty first century the story includes aviation highways bridges ferries steamboats canals railroads electric trolleys and water ports in connecticut and along the multi state travel corridor from new york to boston drawing on a wide array of primary material richard deluca examines how land law and technology have shaped the state and its transportation systems giving special attention to the state s two largest transportation monopolies the new haven railroad and the connecticut department of transportation the book focuses on key events in the development of transportation and legislation it is arranged chronologically and by highlighting themes from each period shows the implications of the state s transportation history on current

the book starts by setting out the duties of a building pathologist in the context of the modern roofing industry defining failure and explaining its underlying causes the main chapters then deal with the main specific types of failure fire shrinkage and roofing systems displacement calendar shrinkage foam insulation shrinkage and stretched membranes plasticizer migration bitumen incompatibility built up roofing felt porosity blistering thermal insulation instability foam insulation problems torch applications polymer dispersion asphalt glass fibre shingle splitting lack of appropriate venting problems with cool roofing and problems with organic fibre portland cement shingles the book concludes with an outline of the principal rules for long service life roofing
