Index of Specifications and Standards 1993 activities like text editing watching movies or managing personal finances are all accomplished with web based solutions nowadays the providers need to ensure security and privacy of user data to that end passwords are still the most common authentication method on the web they are inexpensive and easy to implement users are largely accustomed to this kind of authentication but passwords represent a considerable nuisance because they are tedious to create remember and maintain in many cases usability issues turn into security problems because users try to work around the challenges and create easily predictable credentials often they reuse their passwords for many purposes which aggravates the risk of identity theft there have been numerous attempts to remove the root of the problem and replace passwords e g through biometrics however no other authentication strategy can fully replace them so passwords will probably stay a go to authentication method for the foreseeable future researchers and practitioners have thus aimed to improve users situation in various ways there are two main lines of research on helping users create both usable and secure passwords on the one hand password policies have a notable impact on password practices because they enforce certain characteristics however enforcement reduces users autonomy and often causes frustration if the requirements are poorly communicated or overly complex on the other hand user centered designs have been proposed assistance and persuasion are typically more user friendly but their influence is often limited in this thesis we explore potential reasons for the inefficacy of certain persuasion strategies from the gained knowledge we derive novel persuasive design elements to support users in password authentication the exploration of contextual factors in password practices is based on four projects that reveal both psychological aspects and real world constraints here we investigate how mental models of password strength and password managers can provide important pointers towards the design of persuasive interventions moreover the associations between personality traits and password practices are evaluated in three user studies a meticulous audit of real world password policies shows the constraints for selection and reuse practices based on the review of context factors we then extend the design space of persuasive password support with three projects we first depict the explicit and implicit user needs in password support second we craft and evaluate a choice architecture that illustrates how a phenomenon from marketing psychology can provide new insights into the design of nudging strategies third we tried to empower users to create memorable passwords with emojis the results show the challenges and potentials of emoji passwords on different platforms finally the thesis presents a framework for the persuasive design of password support it aims to structure the required activities during the entire process this enables researchers and practitioners to craft novel systems that go beyond traditional paradigms which is illustrated by a design exercise
