Here Comes the Fun 2023-05-25

the new book from the much loved author of the gran tour a chip shop in poznan and the marmalade diaries food fights fishing and french cooking bestselling author ben aitken s year of actively pursuing fun ben aitken wasn t getting enough he knew it and so did everyone else he was grumpy increasingly boring mostly joyless so he joined a lawn bowls club a week later he doubled down on the doldrums by learning to dance like they do in bollywood then with an almost entirely reformed selfhood winking appealingly just around the corner he started swimming in cold water and was back to square one despite the setbacks and hyperventilation it was becoming clear to him that the very pursuit of fun was a great way of not feeling naff and so he made a vow to have as much of the f stuff as he possibly could taking a liberal approach to the subject he sought out things that he used to find fun a long time ago i e food fights and wrestling things that he d never done before but reckoned could be fun boozy french cooking classes tantric sex things whose fun factor was less obvious and more down to earth nostalgia volunteering edible gardening watching chickens and things that he wasn t at all sure about but were fun according to other people gym classes caving tiktok unsurprisingly the results were mixed but he was undoubtedly left feeling better which left him asking if fun is the finest medicine why do we stop doing it

mousematics learning math the fun way is a series of workbooks for children aged 4 to 7 this is the first workbook in this series what makes it so unique first of all these workbooks have a slightly different purpose than other mathbooks for preschoolers the main purpose of the mousematics series is not to teach preschoolers to count this is something every child will inevitably learn sooner or later but to spark the children's interest to invite them along on an exciting journey into the world of logics and mathematics this is why the tasks in these books are made to be interesting above all four years is the age when many children begin to arduously count everything around them and look for familiar letters and numbers and this book is intended to support this interest children will enjoy counting bunnies behind fences and helping a mouse avoid being eaten by a cat and bringing a truckload of goods from the warehouse secondly we tried to make sure the tasks are created in a way that children do not form stereotypes that so easily sprout and thrive from standard workbooks what are these stereotypes there is always a solution and there's always only one this workbook sometimes allows two correct solutions or no solution at all for example when there are only two floors in a building and the child is asked to find the third one the dots that have to be counted are always round and the grid cells are always square we sometimes have the dots replaced with pluses or

triangles or any other shape and instead of squares we might have diamonds or trapezoids you can only count from left to right in this workbook there are different possible ways if there are two columns and a line needs to be drawn to connect identical objects the paired object will be found in the second column in our book it might be in the same column or there might be no pair at all five is when five dots are in a row or when they are arranged with four in the corners of a square and one in the middle like on game dice we have five objects shown in dozens of different patterns come on i ve done this task before in this book the tasks of the same type get gradually more complicated as far as stereotypes go four year old children as much easier to work with than first graders because it is harder to break deeply rooted stereotypes than to prevent them from developing in the first place thirdly we have to remember that the foundation of mathematics is not the actual counting but the ability to think logically this is why our exercises are aimed primarily at developing logic skills the ability to identify attributes as well as the ability to find identical objects or to find the odd one out among objects based on shape or color etc sometimes children inadvertently mislead adults by quickly learning to say the tongue twister one two three four five or even up to ten it doesn't really mean that the child has learned to count often even the children who say this tongue twister are not very confident in counting objects and cannot always glance over and take in a group of objects and immediately understand how many there are another widespread adult misperception is the myth that any idea can be explained to a child and if the explanation is simple enough then the child will immediately grasp the concept there are concepts and skills that have not yet been owned by children for example in order to find out how much 5 + 1 will be many children put a finger next to their whole hand and start counting the five hand fingers over again and it is useless to try to talk them out of it it means that the skill of computing operations has not been completely formed yet it needs time and various training exercises aimed at adopting assimilating that skill at making it their own this is exactly what such workbooks as this one are needed for

There are certain catchwords that are more fascinating than the rest gamification is one such catchword this is not shocking as the roots are traced back to the world of games it is quite amusing that the term is vague for both beginners and intellectuals while beginners misinterpret gamification as playing games intellectuals brush it off as yet another deviation of a loyalty or

rewards program but what is it actually those in the community of gaming theory and practice have categorized gamification as a term it is usually considered that it means employing gaming principles to non gaming situations it is a design process that reframes goals to be more attractive and attainable using the principles of game design the gamified solutions targets our usual instincts to seek competition and accomplishment using conventional gamification methods such as point gathering virtual currencies accomplishment budgets or levels with growing difficulty are used within game community this book does not suggest recipes for gamification since the best practices are still evolving instead it provides a list of compelling gamification success stories implemented in organizations from various industries enterprise gamification is still in its beginning stage there is much more to pursue and learn the overall objectives of this book are 1 to present the current state of games and use of gamification in various sectors and 2 to explore future opportunities and limitations of using gamification
