updated this best selling book retains its hallmark intuitive lively writing style captivating introduction to applications from diverse disciplines and plentiful exercises and worked out examples the 8th edition includes five new sections and numerous new examples and exercises many of which focus on strategies applicable in risk industries such as insurance or actuarial work the five new sections include section 3.6.4 presents an elementary approach using only conditional expectation for computing the expected time until a sequence of independent and identically distributed random variables produce a specified pattern section 3.6.5 derives an identity involving compound poisson random variables and then uses it to obtain an elegant recursive formula for the probabilities of compound poisson random variables whose incremental increases are nonnegative and integer valued section 5.4.3 is concerned with a conditional poisson process a type of process that is widely applicable in the risk industries section 7.10 presents a derivation of and a new characterization for the classical insurance ruin probability section 11.8 presents a simulation procedure known as coupling from the past its use enables one to exactly generate the value of a random variable whose distribution is that of the stationary distribution of a given markov chain even in cases where the stationary distribution cannot itself be explicitly determined other academic press books by sheldon ross simulation 3rd ed isbn 0 12 598053 1 probability models for computer science isbn 0 12 598051 5
