

Free ebook Grade 11 geography of ethiopia .pdf

the first comprehensive study of the historical geography of ethiopia this book surveys the political economic and cultural geography of the region from ancient times to the dawn of the 18th century based on classical medieval and later sources the late huntingford s volume is an essential guide to the locations mentioned in ethiopian historical documents and literature this book provides a succinct but comprehensive presentation of key geomorphological locations and topics including information about geomorphological heritage and maps to visit the most important sites apart from often being remarkably scenic landscapes reveal stories that often can be traced back in time tens of million years and include unique events this is particularly true for ethiopia where spectacular examples of different landforms are present its geomorphology varies from highlands marked by high volcanoes and incised by deep river gorges to the rift valley lakes endorheic systems and the below sea level lowlands with characteristic landscapes which are unique in the world landscapes and landforms of ethiopia highlights all these topics including essential information about geology and tectonic framework past and present climate hydrology geographical regions and long term geomorphological history it is a highly informative book providing insight for readers with an interest in geography and geomorphology a historical and current look at ethiopia discussing the land the government the culture the people and the economy remote areas are often characterized by lower welfare outcomes due to economic disadvantages and higher transaction costs for trade but their worse situation may also be linked to worse public service delivery relying on large household surveys in rural ethiopia we explore this by assessing the association of two measures of remoteness 1 the distance of villages and primary service centers to district capitals and 2 the distance of households to service centers the last mile with public service delivery in agriculture and health sectors in the agriculture sector we document statistically significant and economically meaningful associations between exposure to agriculture extension and the two measures of remoteness for health extension only the last mile matters these differences between the two sectors could be due to the fact that more remote villages tend to have fewer agriculture extension workers who also put in fewer hours than their peers in more connected areas this does not apply in the health sector these findings provide valuable inputs for policymakers aiming to improve inclusiveness in poor rural areas geography has been shown to be an important determinant of economic development remote areas tend to be poorer due to higher transaction costs for trade or inhospitable environments in this study we show that remote areas in rural ethiopia are also disadvantaged in their access to public service delivery relying on large household surveys we assessed the association between exposure to agriculture and health extension and two measures of remoteness 1 the distance of service centers to district capitals and 2 the distance of households to service centers i e the last mile we found that villages located farther away from district capitals were less likely to receive agricultural extension services than other villages in contrast exposure to health extension services did not vary across more and less connected villages this difference between the two sectors could be due to the fact that more remote villages tend to have fewer agriculture extension workers who also put in fewer hours into their work than their peers we did not find similar evidence in the health sector finally for both sectors we found that the last mile matters more remote households within villages were less likely to receive both types of extension services this book is a general survey of ethiopia as a country and its people it focuses on many subjects about ethiopia s history geography politics ethnic groups and their cultures the book also covers eritrea its people history and culture but the main focus of the book is on ethiopia information packed volumes provide comprehensive overviews of each nation s people geography history government economy and culture abundant full color illustrations guide the reader on a voyage of discovery maps reflect current political boundaries brief text and photographs introduce the geography history government people and economy of ethiopia understanding ethiopia is a detailed description of ethiopia s geological story and enables non specialist readers to share the author s thrill at gaining a deeper insight into the processes which produced and continue to shape this amazing country ethiopia s spectacular landscapes ranging from mountains over 4500m high to salt plains 150m below sea level are a reflection of the geological processes that formed the country indeed its history and the historical sites for which it is renowned are largely determined by geology readers learn why and how ethiopia s geology is both unique and dynamic as here the earth s crust is in the process of breaking apart this book is a general survey of ethiopia as a country and its people it focuses on many subjects about ethiopia s history geography politics

and the diverse cultures of its people who collectively constitute one of the most fascinating countries in the history of africa and of the entire world it starts from the beginning when foundations were laid for what was later to become the country of ethiopia which is one of the oldest civilisations in the world ethiopia also has the distinction of being the oldest christian nation in africa and one of the three oldest christian countries in the world after georgia and armenia ethiopia converted to christianity centuries before europe did and it is mentioned in the bible many times the book also covers eritrea its people history and culture but not in as much detail as it does ethiopia still the information about eritrea is enough to serve as a simple and general introduction to the country but the main focus of the book is on ethiopia ethiopia is a compendium on ethiopia and northeast africa for travellers students businessmen people interested in africa policymakers and organisations in this book 85 specialists from 15 countries write about the land of our fossil ancestor lucy about its rock hewn churches and national parks about the coexistence of christians and muslims and about strange cultures but also about contemporary developments and major challenges to the region across ten chapters they describe the land and people its history cultures religions society and politics as well as recent issues and unique destinations documented with tables maps further reading suggestions and photos introduces the geography history government economy culture daily life and people of the country known as the roof of africa geography nestled in the horn of africa ethiopia is the oldest independent nation on the continent this culturally diverse country has a rich and tumultuous history dating back thousands of years in this book readers will learn about the diverse landscape of ethiopia s past and present including its peoples geography religion economy and culture this book is a contribution by the presenters of the 2020 international conference on the Nile and Grand Ethiopian Renaissance Dam GERD the Nile basin is facing unprecedented level of water right challenges after the construction of GERD has begun ethiopia egypt and sudan have struggled to narrow their differences on filling and operation of the GERD the need for science and data based discussion for a lasting solution is crucial historical perspectives water rights agreements failed negotiations and other topics related to the Nile is covered in this book the book covers Nile water claims past and present international transboundary basin cooperation and water sharing Nile water supply and demand management Blue Nile Abay and Grand Ethiopian Renaissance Dam land and water degradation and watershed management emerging threats of the lakes region in the Nile basin and hydrologic variation and monitoring this book is beneficial for students researchers sociologists engineers policy makers lawyers water resources and environmental managers and for the people and governments of the Nile basin this unique guide produced by the department of defense provides comprehensive information about all aspects of life in ethiopia with a special emphasis on geography history the economy society security and military matters religion traditions urban and rural life ethnic groups crime the environment government holidays gender issues and much more profile introduction facts and figures geography introduction area geographic divisions topographical features climate rivers and lakes population and cities environmental concerns natural hazards history introduction early history the Solomonic dynasties the modern dynasties modern ethiopia economy industry and manufacturing agriculture banking and currency trade investment energy and mineral resources standard of living tourism transportation business outlook international organizations society introduction ethnic groups and languages religion social traditions traditions celebrations and holidays cuisine arts traditional dress folklore sports and recreation gender issues security introduction military u s ethiopian relations relations with neighboring countries terrorist groups and activity secessionist groups issues affecting internal stability outlook footnotes profile ethiopia is facing environmental and poverty challenges and urgently needs effective management of its environmental resources much of the ethiopian landscape has been significantly altered and reshaped by centuries of human activities and three quarters of the rural population is living on degraded land over the past two decades the country has seen rapid economic and population growth and unparalleled land use change this book explores the challenges of sustaining the resource base while fuelling the economy and providing for a growing population that is greatly dependent on natural resources for income and livelihoods adopting a political ecology perspective this book comprehensively examines human impacts on the environment in ethiopia defining the environment both in terms of the quantity and quality of renewable and non renewable natural resources with high levels of economic production and consumption also come unintended side effects waste discharges emissions of pollutants and industrial effluents these pollutants can degrade the quality of water air land and forests as well as harm the health of people animals and other living organisms if untreated or disposed of improperly this book demonstrates how the relationship between society and environment is inherently and delicately interwoven providing an account of ethiopia s current environment and natural resource base and

future considerations for environmentally sustainable development essay from the year 2002 in the subject geography earth science regional geography grade 2 0 university of trier course regional seminary ehtiopia 9 entries in the bibliography language english abstract regarding the history of african nations ethiopia is commonly considered as one of the most unique countries of africa one of the reasons for its originality and cultural richness is the fact that ehtiopia during his long history as a sovereign state has never been colonized by any of the european powers but nowadays in the western world ethiopia is unfortunately rather associated with naturals disasters and wars most of these wars which constitute the main cleavage lines of inner ethiopian conflicts were fought among ethnic groups to have a better understanding of those conflicts as well as towards a better understanding of the current demographic dynamics it could be very helpful to have a brief look at ethiopian history in order to describe the main turning points of ethiopia s rich history we should have an idea about its ethnic development following that question this presentation is divided in four chapters which also generally mark the four main sections of ethiopian history the kingdom of axum the modernisation from emperor theodore to emperor haile selassie the marxist period under haile mengistu and finally the current situation since 1991 although it still has a low urban population when compared with the rest of the world ethiopia nevertheless has been experiencing one of the most rapid urbanization processes of recent years this rapid urban growth however has not been accompanied by a commensurate increase in basic infrastructure and amenities that are essential for a healthy urban environment housing water supply sanitation services drainage transport networks and health services have not been able to keep pace with the prevailing urban growth rates resulting in a deterioration of urban living conditions and increasingly serious health problems living with urban environmental health risks examines the extent and nature of environmental problems in urban areas in ethiopia and their impact on health the book points to the economic and political causes that underlie many of the urban problems in the country this in depth analysis suggests ways to deal with these problems at community municipal and national levels the highlands of ethiopia is a memoir of sir william cornwallis harris in this book he describes his journey as the first british ambassador to the christian court of the kingdom of shoa in the highlands of aethiopia ruled at the time by sahela selassie that mission paved the way for trade with this part of africa and ultimately for the british colonization of large territories of africa including sudan this book is about the grand ethiopian renaissance dam newly being built on the blue Nile a transboundary river due to rising population and increasing water demand in the Nile basin major projects raise interest and concern by millions with potential for water conflict the dam design reservoir filling policy operation of the dam riparian countries response dam site importance and social impact and economy of the dam are presented in the book this book provides a comprehensive description of groundwater resources in ethiopia and its various dimensions groundwater as resource environmental functions and socioeconomics the prevailing knowledge of groundwater resources in ethiopia or elsewhere in sub saharan africa was based on geological and stratigraphic framework known nearly four decades ago mainly 1960 s and 70 s thanks to the substantial geoscientific research since the 70 s a new set of relevant geological stratigraphic data has been created that helps to re define our understanding of groundwater resources in africa as a whole and in ethiopia in particular a for the first time the basement aquifer of ethiopia has been described hydrogeologically based on genesis of regoliths deep weathering and striping history clear regional difference in groundwater potential is shown for the first time comparative accounty has been given regarding groundwater occurrence in the generally low grade basement rocks of ethiopia arabian nubian shield and high grade basement rocks of the rest of africa b for the first time groundwater occurrence in multilayered sedimentary rocks account for spatial variation in degree of karstification deformation history and stratigraphy c the vast volcanic aquifers of ethiopia which have previously classified based on their ages are now reclassified based on age morphology eg groundwater in plateau volcanics groundwater in shield volcanics and aquifer structure d the loose alluvio lacustrine sediments which were known as least extensive in previous works based on areal cover are in fact shown to host the most voluminous groundwater resources in ethiopia these aquifers have now been described based on their geomorphology extent and genesis the aim of this book is to use these newly created knowledge to redefine the understanding of groundwater resources in ethiopia bachelor thesis from the year 2019 in the subject geography earth science physical geography geomorphology environmental studies grade a ethiopian civil service university college of urban development and engineering course research language english abstract the general objective of this senior essay is to assess the impact that urbanization has brought to the environment in yeka sub city the research is descriptive in its very nature besides both quantitative and qualitative research approach is used simple random sampling technique particularly lottery method is used to select samples from the

total population both primary and secondary data sources have been employed and questionnaire interview and observation are employed to collect the required data furthermore quantitative i e descriptive statistics specially frequency distribution and percentage and qualitative i e verbal analysis or narration data analysis methods have been launched to analyze the collected data data are mainly presented in tabular pictorial and textual form continuous population growth in yeka sub city resulted in the encroachment of forest land mostly through informal way and this resulted in the minimization of forest cover and the alteration of land use from natural forest into human made residential and other built up areas on a continuous manner besides the formal settlement made by the legal allotment of land the informal settlement is very high and even difficult to control this indicates the high magnitude of urbanization in the sub city the main causes for the continuous urban population growth or urbanization are influx of people into the city of addis ababa ever increasing natural birth rate and reduced mortality rate the impact that urbanization has on the environment encompass deforestation land slide and soil degradation excessive waste generation and water and land pollution and air pollution protecting agricultural and fores this diverse series offers an accessible approach to countries across the world from ethiopia to poland each title gives information about the language history and geography of the country and includes a detailed map and useful facts as well as how to find out more this book is the most complete accessible and up to date resource for ethiopian geography history politics economics society culture and education with coverage from ancient times to the present ethiopia is a comprehensive treatment of this ancient country s history coupled with an exploration of the nation today arranged by broad topics the book provides an overview of ethiopia s physical and human geography its history its system of government and the present economic situation but the book also presents a picture of contemporary society and culture and of the ethiopian people it also discusses art music and cinema class gender ethnicity and education as well as the language food and etiquette of the country readers will learn such fascinating details as the fact that coffee was first domesticated in ethiopia more than 10 000 years ago and that modern ethiopia comprises 77 different ethnic groups with their own distinct languages governance everywhere is concerned with spatial relationships modern states map local communities making them legible for the purposes of control ethiopia has gone through several stages of mapping in its imperial revolutionary and postrevolutionary phases in 1986 the southern marches of imperial ethiopia a cross disciplinary collection edited by don donham and wendy james opened up the study of center periphery relations in the ethiopian empire until the fall of the monarchy in 1974 this new volume examines similar themes taking the story forward through the major changes effected by the socialist regime from the revolution of 1974 to its overthrow in 1991 and then into the current period that has been marked by moves toward local democracy and political devolution topics include the changing fortunes of new and historic towns and cities the impact of the mengistu regime s policies of villagization and resettlement local aspects of the struggle against mengistu and its aftermath and the fate of border regions special attention is given to developments since 1991 to new local institutions and forms of autonomy the links between the international diasporas of ethiopia and the fortunes of their home areas the collection draws on the work of established scholars as well as a new generation of ethiopian and international researchers in the disciplines of anthropology political science history and geography explores the economy of africa to analyze the drawbacks and attributes that affect economic development the continent is approached on a regional basis with all but the first five background chapters being devoted to individual countries and groups of countries visit the african country of ethiopia and learn about its geography people and history this book with contributions from leading academics and including reviews and case studies from ethiopian church forests provides a valuable reference for advanced students and researchers interested in forest and other natural resource management ecology and ecosystem services as well as restoration options the book addresses various aspects including a general overview of ethiopian church forests the present role and future challenges of church forests it also discusses their structure and diversity in the context of sustainability and discusses restoration options for surrounding landscapes under consideration of the circumstances of the land and the needs of surrounding communities the intended readership includes natural resource professionals in general as well as forestry professionals in particular practitioners policymakers educators and researchers the book will provide the reader with a good foundation for understanding ethiopian forest resources and restoration options of degraded landscape describes the geography history economy and culture of ethiopia in a question and answer format provided by publisher

The Historical Geography of Ethiopia 1989

the first comprehensive study of the historical geography of ethiopia this book surveys the political economic and cultural geography of the region from ancient times to the dawn of the 18th century based on classical medieval and later sources the late huntingford s volume is an essential guide to the locations mentioned in ethiopian historical documents and literature
