Handbook on Agent-Oriented Design Processes *2014-03-28*

to deal with the flexible architectures and evolving functionalities of complex modern systems the agent metaphor and agent based computing are often the most appropriate software design approach as a result a broad range of special purpose design processes has been developed in the last several years to tackle the challenges of these specific application domains in this context in early 2012 the ieee fipa design process documentation template sc0097b was defined which facilitates the representation of design processes and method fragments through the use of standardized templates thus supporting the creation of easily sharable repositories and facilitating the composition of new design processes following this standardization approach this book gathers the documentations of some of the best known agent oriented design processes after an introductory section describing the goal of the book and the existing ieee fipa standard for design process documentation thirteen processes including the widely known open up the de facto standard in object oriented software engineering are documented by their original creators or other well known scientists working in the field as a result this is the first work to adopt a standard unified descriptive approach for documenting different processes making it much easier to study the individual processes to rigorously compare them and to apply them in industrial projects while there are a few books on the market describing

the individual agent oriented design processes none of them presents all the processes let alone in the same format with this handbook for the first time researchers as well as professional software developers looking for an overview as well as for detailed and standardized descriptions of design processes will find a comprehensive presentation of the most important agent oriented design processes which will be an invaluable resource when developing solutions in various application areas
