the search for smarter ways to prevent or control pollution has generated heated debate on almost every conceivable topic related to setting goals improving institutional arrangements and choosing the most effective means for achieving those goals this last issue choosing the means or policy instruments to meet environmental goals can be a surprisingly complex task for decision makers given the need to balance other competing concerns the environmental policy toolbox contains many and varied instruments but lacks a clear set of instructions for their use this ota report fills that need the guide is organized into three major sections 1 the environmental policy toolbox a discussion of 12 major policy tools their frequency of use and key strengths and weaknesses 2 the criteria for comparing tools our evaluation of how effective these instruments are in achieving the values and interests or criteria decision makers are likely to weigh 3 choosing tools a series of questions for matching a tool or tools to a specific problem choosing tools that satisfy several much less all of these criteria for a specific problem is the challenge unfortunately no perfect policy tool exists to meet everyone s expectations for every problem

after a brief introduction to low power vlsi design the design space of asip instruction set architectures isas is introduced with a special focus on important features for digital signal processing based on the degrees of freedom offered by this design space a consistent asip design flow is proposed this design flow starts with a given application and uses incremental optimization of the asip hardware of asip coprocessors and of the asip software by using a top down approach and by applying application specific modifications on all levels of design hierarchy a broad range of real world signal processing applications serves as vehicle to illustrate each design decision and provides a hands on approach to asip design finally two complete case studies demonstrate the feasibility and the efficiency of the proposed methodology and quantitatively evaluate the benefits of asips in an industrial context

it is probably an overstatement to say that the discipline of telecommunication systems is becoming an application of digital signal processing dsp however there is no doubt that by the mid i980s integrated circuit technology has advanced to such an extent that revolutionary advances in telecommunications are fostered by the introduction of new and powerful dsp algorithms actually dsp has been recently playing a major role in the development of telecommuni cations systems to name just one of the most widespread applications where this interaction has been most effective we may mention the use of intelligent dsp to improve the peiformance of transmission systems by allowing sophisticated algorithm to be implemented in radio transmitters and receivers for personal communications other areas have equally benefited by the latest advances of dsp speech coding and synthesis speech recognition and enhancement radar sonar digital audio and remote sensing just to cite afew with this in mind when choosing the topic for the 7th tyrrhenian workshop on digital communications whose contributions are collected in this book we aimed at focusing on the state of the art and the perspectives of the interaction between dsp and telecommunications two disciplines that are becoming increasingly intertwined although by no means exhaustive of all the applications of dsp to telecommu nications we believe that the material presented in this book pinpoints the most interesting among them and hence it will be considered as a useful tool for investigating this complex and highly challenging field
