Making Human 2013-03-16 the interventions of crisis management during the 2007 to 2011 financial crisis were not simply responses to a set of given developments in markets banking or neo liberal capitalism nor can those interventions be adequately explained as the actions of sovereign state officials and institutions instead Langley argues processes of crisis governance are shown to have established six principal technical problems to be acted upon liquidity toxicity solvency risk regulation and debt and that the governance of these technical problems is shown to have been strategically assembled in order to secure the continuation of a particular financialized way of life that depends upon global financial circulations contributing to interdisciplinary debates in cultural economy and the social studies of finance and grounded in extensive empirical research this book offers an innovative analysis of how the contemporary global financial crisis was governed through an exploration of the interventions made by central banks treasuries and regulatory authorities in the Anglo American heartland of the crisis between 2007 and 2011 experimental and strategic apparatuses of crisis governance are shown to have emerged these discrete apparatuses established the six technical problems to be acted upon but also shared certain proclivities and preferences crisis governance assembled discourses and devices of economy in relation with sovereign monetary fiscal and regulatory techniques and elicited an affective atmosphere of confidence it also sought to secure the financialized way of life which turns on the opportunities ostensibly afforded by uncertain financial circulations and gave rise to post crisis technical fixes designed to advance the resilience of banking and the macro prudential regulation of financial stability thus the consensus that prevails across economics political economy and beyond wherein sovereign state institutions are cast as coming to the rescue of the markets banking or neo liberal capitalism conceals a great deal more than it reveals about the governance of the global financial crisis

2022-06-16 discover nine common business decision making traps and learn practical tools for avoiding them in this masterful research based guide from a professor of strategic thinking. Daniel Kahneman, author of *Thinking Fast and Slow*, we all make decisions all the time. It's so natural that we hardly stop to think about it. Yet even the smartest and most experienced among us make frequent and predictable errors. So what makes a good decision? Should we trust our intuitions and if so when? How can we avoid being tripped up by cognitive biases when we are not even aware of them? In *You're About to Make a Terrible Mistake*, strategy professor and management consultant Olivier Sibony draws on dozens of fascinating and engaging case studies to show how cognitive biases routinely lead all of us, including even the most renowned business titans, into nine common decision making traps. But instead of rehashing the same old debiasing techniques that fail managers time and again, Sibony explains that the best way to avoid the pitfalls of cognitive bias is to craft an effective decision making architecture in your organization: a system of techniques and processes that leverage collective intelligence to help leaders make the best decisions possible. And provides 40 concrete methods for doing so. Distinctive in the clarity and practicality of its message, *You're About to Make a Terrible Mistake* distills the latest developments in behavioral economics and cognitive psychology into actionable tools for making smart, effective decisions in business and beyond. Succinct, accurate, and even-handed. I loved it. Angela Duckworth, bestselling author of *Grit: The Best (and Funniest) Most Useful Guide to Cognitive Bias in Business*. If you make decisions, you need to read this book. Safi Bahcall, bestselling author of *Loonshots*.

Michele White considers how women are constructed, produce themselves as subjects, form vital production cultures on sites like Etsy and deploy technological processes to reshape their identities and digital characteristics. She studies the means through which women market traditional female roles, are viewed and produce and restructure their gendered, raced, eroticized, and sexual identities, incorporating a range of examples across numerous forms of media, including trash, the dress, wedding photography, internet, how-to instructions about zombie walk, brides, nail polish, blogging, DIY, crafting, and reborn doll production. *Producing Women* elucidates women's production cultures online and the ways that individuals can critically study and engage with these practices.

Producing Women 2015-10-23 this work argues that current cryptocurrency regulation, particularly in the areas of enforcement and compliance, is inadequate. It proposes reflexive regulation as an alternative approach. This book provides strategies for a reflexive regulation approach to cryptocurrencies developed through the identification of the internal self-regulatory mechanisms of the cryptocurrency system, apportioning blame for current problems to the regulators' failure to take into account the inherent technical features of cryptocurrencies. The work promotes reflexive regulation in which the law acts at a subsystem-specific level to install, correct, and redefine democratic self-regulatory mechanisms. It provides strategies for this approach developed through the identification of the internal self-regulatory mechanisms of the cryptocurrency system. These are identified as imbedded in the technical functionality of computer code and consensus-based distributive governance mechanisms, respectively. In addition to providing a technical, historical, and legal overview of cryptocurrencies, the book concludes by providing

recommendations aimed at redirecting code and consensus towards achieving regulatory goals in this way it draws from the theory of reflexive law in order to provide both a substantive and jurisprudential perspective on the regulation of cryptocurrencies and to illustrate how financial technology fintech regulation can only be effective once regulators consider both the fin and the tech in their regulatory approaches the book will be of interest to researchers academics and policy makers working in the areas of financial regulation and jurisprudence financial crime banking regulation information systems and information technology
