this book offers readers fresh insights on applying extended reality to digital anatomy a novel emerging discipline indeed the way professors teach anatomy in classrooms is changing rapidly as novel technology based approaches become ever more accessible recent studies show that virtual vr augmented ar and mixed reality mr can improve both retention and learning outcomes readers will find relevant tutorials about three dimensional reconstruction techniques to perform virtual dissections several chapters serve as practical manuals for students and trainers in anatomy to refresh or develop their digital anatomy skills we developed this book as a support tool for collaborative efforts around digital anatomy especially in distance learning international and interdisciplinary contexts we aim to leverage source material in this book to support new

digital anatomy courses and syllabi in interdepartmental interdisciplinary collaborations digital anatomy applications of virtual mixed and augmented reality provides a valuable tool to foster cross disciplinary dialogues between anatomists surgeons radiologists clinicians computer scientists course designers and industry practitioners it is the result of a multidisciplinary exercise and will undoubtedly catalyze new specialties and collaborative master and doctoral level courses world wide in this perspective the unesco chair in digital anatomy was created at the paris descartes university in 2015 anatomieunesco.org it aims to federate the education of anatomy around university partners from all over the world wishing to use these new 3d modeling techniques of the human body
