

irrigated area the so called overall consumed ratio can be increased less water needs to be drained this alleviates part of the related environmental problems further if the overall consumed ratio for the above 7 5 million hectare is improved less water needs to be diverted from the rivers hence more water can flow towards the aral sea as mentioned above part of the non consumed irrigation water drains to the groundwater basin commonly the natural discharge capacity of this basin is insufficient to handle this imported water as a result the groundwater table rises towards the land surface causing waterlogging in semi arid zones this waterlogging triggers a soil salinity problem resulting to a significant reduction in crop yields the artificial increase of the discharge capacity and lowering of the groundwater table solves the soil salinity problem essential readings in infectious disease epidemiology is a collection of readings and practice exercises designed to complement the methods training presented in the main text essentials of infectious disease epidemiology where the parent text focuses on methods this book provides actual readings and examples on which to practice new skills important notice the digital edition of this book is missing some of the images or content found in the physical edition obesity has devastating effects on a patient s overall health with specific negative effects on organ systems long term the hepatologist must often manage diseases of the liver and pancreas as a result of obesity this issue will provide a current update on the diagnosis treatment and management of nafld and nash dr bernstein has assembled the top leaders in the field to provide timely clinical reviews articles are devoted to the following topics clinical and economic burden of nafld nash nafld nash in children and its implications natural history of nafld nash diagnosis and evaluation of nafld nash radiological imaging in nafld nash the use of liver biopsy in nafld when to biopsy and in whom pathophysiology of nafld nash risk factors for the development of nafld nash including genetics role of intestinal microbes in nafld nash nafld nash and the metabolic syndrome nafld nash and lipid and insulin resistance nafld nash and cardiac disease current treatment of nafld nash emerging treatment of nafld nash nafld nash and hcc and nafld nash and liver transplantation readers will have a clear understanding of how to manage outcomes for these patients principles of research design and drug literature evaluation is a unique resource that provides a balanced approach covering critical elements of clinical research biostatistical principles and scientific literature evaluation techniques for evidence based medicine this accessible text provides comprehensive course content that meets and exceeds the curriculum standards set by the accreditation council for pharmacy education acpe written by expert authors specializing in pharmacy practice and research this valuable text will provide pharmacy students and practitioners with a thorough understanding of the principles and practices of drug literature evaluation with a strong grounding in research and biostatistical principles principles of research design and drug literature evaluation is an ideal foundation for professional pharmacy students and a key resource for pharmacy residents research fellows practitioners and clinical researchers features chapter pedagogy learning objectives review questions references and online resources instructor resources powerpoint presentations test bank and an answer key student resources a navigate companion website including crossword puzzles interactive flash cards interactive glossary matching questions and links from the foreword this book was designed to provide and encourage practitioner s development and use of critical drug information evaluation skills through a deeper understanding of the foundational principles of study design and statistical methods because guidance on how a study s limited findings should not be used is rare practitioners must understand and evaluate for themselves the veracity and implications of the inherently limited primary literature findings they use as sources of drug information to make evidence based decisions together with their patients the editors organized the book into three supporting sections to meet their pedagogical goals and address practitioners needs in translating research into practice thanks to the editors authors and content of this book you can now be more prepared than ever before for translating research into practice 1 douglas ried phd fapha editor in chief emeritus journal of the american pharmacists association professor and associate dean for academic affairs college of pharmacy university of texas at tyler tyler texas well organized and vibrantly illustrated throughout handbook of liver disease is a comprehensive yet concise handbook providing authoritative guidance on key clinical issues in liver disease the quick reference outline format ensures that you ll find answers when you need them and cover to cover updates keep you abreast of the

recent rapid changes in the field written by leading international experts in hepatology this reference is ideal for hepatologists gastroenterologists internists family practitioners trainees and others who diagnose and manage patients with liver disorders uses a highly templated outline format key points in each chapter alert symbols and highlighted review points to provide a just the facts approach to daily clinical questions on liver disease features expanded hepatitis chapters including completely updated coverage of new safe and effective oral regimens for the treatment of hepatitis c provides completely updated coverage of alcoholic liver disease autoimmune hepatitis portal hypertension primary biliary cholangitis hepatic tumors cirrhosis nonalcoholic liver disease liver transplantation and more includes the latest information on adolescents with liver disease moving into adult care covers the revised criteria for prioritizing liver transplantation using the meldna score new options for the treatment of hepatocellular carcinoma and improved management of hepatorenal syndrome non alcoholic fatty liver disease nafld is a common cause of elevated liver enzymes and chronic liver disease in western countries nafld is characterized by elevated liver enzymes in the absence of alcohol consumption and secondary causes of liver disease it is an independent predictor of future risk of cardiovascular diseases type 2 diabetes and metabolic syndrome hypertension abdominal obesity dyslipidemia glucose intolerance this book is a quick reference guide for medical students and professionals about nafld readers will find a summary of epidemiology clinical features diagnosis imaging techniques histopathology and disease management the book also presents information about nafld linked with hepatocellular carcinoma and guidelines for treating nafld in pediatric patients each chapter presents information in a simple structured manner making this text an ideal handbook for supplementing hepatology modules in medical curricula statistics of the administrative county of london together with certain statistics of the adjacent districts more than two million medical students doctors and other health professionals from around the globe have owned a copy of davidson s principles and practice of medicine since it was first published today s readers rely on this beautifully illustrated text to provide up to date detail of contemporary medical practice presented in a style that is concise and yet easy to read davidson s provides the factual knowledge required to practise medicine explaining it in the context of underlying principles basic science and research evidence and shows how to apply this knowledge to the management of patients who present with problems rather than specific diseases the book has won numerous prizes including being highly commended in the british medical association book awards davidson s global perspective is enhanced by the input of an international team of authors and a distinguished international advisory board from 17 countries building on the foundations laid down by its original editor davidson s remains one of the world s leading and most respected textbooks of medicine the underlying principles of medicine are described concisely in the first part of the book and the detailed practice of medicine within each sub specialty is described in later system based chapters most chapters begin with a two page overview of the important elements of the clinical examination including a manikin to illustrate the key steps in the examination of the relevant system a practical problem based clinical approach is described in the presenting problems sections to complement the detailed descriptions of each disease the text is extensively illustrated with over 1000 diagrams clinical photographs and radiology and pathology images 1350 text boxes present information in a way suitable for revision including 150 clinical evidence boxes summarising the results of systematic reviews and randomised controlled trials and 65 in old age boxes highlighting important aspects of medical practice in the older population a combined index and glossary of medical acronyms contains over 10 000 subject entries the contents can also be searched comprehensively as part of the online access to the whole book on the studentconsult platform access over 500 self testing questions with answers linked to the book s content for further reading the text uses both si and non si units to make it suitable for readers throughout the globe a new chapter specifically on stroke disease recognises the emergence of stroke medicine as a distinct clinical and academic discipline a rationalisation of the 1350 boxes used throughout the book gives a simpler and clearer presentation of the various categories new in adolescence boxes recognise the fact that many chronic disorders begin in childhood and become the responsibility of physicians practising adult medicine these boxes acknowledge the overlap transitional phase and highlight the key points of importance when looking after young people the regular

introduction of new authors and editors maintains the freshness of each new edition on this occasion dr ian penman has joined the editorial team and 18 new authors bring new experience and ideas to the content and presentation of the textbook an expanded international advisory board of 38 members includes new members from several different countries a 32 year old caucasian lady was admitted to hospital following a collapse at the gym her friends described the patient falling to the floor while exercising on the rowing machine followed by twitching of her arms and legs and a period of being unrousable you are the medic on duty 100 cases in acute medicine presents 100 acute conditions commonly seen by medical students and junior doctors in the emergency department or on the ward or in the community setting a succinct summary of the patient s history examination and initial investigations including photographs where relevant is followed by questions on the diagnosis and management of each case the answer includes a detailed discussion of each topic with further illustration where appropriate providing an essential revision aid as well as a practical guide for students and junior doctors making clinical decisions and choosing the best course of action is one of the most challenging and difficult parts of training to become a doctor these cases will teach students and junior doctors to recognize important clinical symptoms and signs and to develop their diagnostic and management skills market forces are driving a radical restructuring of health care delivery in the united states at the same time more and more people are living comparatively long lives with a variety of severe chronic health conditions many such people are concerned about the trend toward the creation of managed care systems because their need for frequent often complex medical services conflicts with managed care s desires to contain costs the fear is that people with serious chronic disorders will be excluded from or underserved by the integrated health care delivery networks now emerging responding to a request from the national institute of arthritis and musculoskeletal and skin diseases this book reflects the results of a workshop that focused on the following questions does the model of managed care or an integrated delivery system influence the types of interventions provided to patients with chronic conditions and the clinical and health status outcomes resulting from those interventions if so are these effects quantitatively and clinically significant as compared to the effects that other variables e g income education ethnicity have on patient outcomes if the type of health care delivery system appears to be related to patient care and outcomes can specific organizational financial or other variables be identified that account for the relationships if not what type of research should be pursued to provide the information needed about the relationship between types of health care systems and the processes and outcomes of care provided to people with serious chronic conditions the study of valvular heart disease has progressed rapidly over the past two decades the understanding of etiology and natural history the precision of noninvasive assessment and the surgical and interventional management of valve disease have all improved dramatically coupled with an appreciation of physiologic principles thoughtful interviews and physical exam current technology allows clinicians to characterize all types of valve lesion in addition evolving techniques in interventional cardiology and cardiac surgery guided by quantitative outcome analysis have reduced the morbidity and mortality of these procedures reflecting all the above and evidence based medical practice the authors aim to provide a concise and straightforward guide to the recognition and management of valvular heart disease complemented by current guidelines and abundant high quality images it will be a valuable reference for all involved in the care of patients with valvular heart disease including cardiologists in practice and training young hospital doctors general physicians cardiac nurse specialists and medical students the vector borne zika virus joins avian influenza ebola and yellow fever as recent public health crises threatening pandemicity by a combination of stochastic modeling and economic geography this book proposes two key causes together explain the explosive spread of the worst of the vector borne outbreaks ecosystems in which such pathogens are largely controlled by environmental stochasticity are being drastically streamlined by both agribusiness led deforestation and deficits in public health and environmental sanitation consequently a subset of infections that once burned out relatively quickly in local forests are now propagating across susceptible human populations whose vulnerability to infection is often exacerbated in structurally adjusted cities the resulting outbreaks are characterized by greater global extent duration and momentum as infectious diseases in an age of nation states and global health programs cannot as much of the present modeling

literature presumes be described by interacting populations of host vector and pathogen alone a series of control theory models is also introduced here these models useful to researchers and health officials alike explicitly address interactions between government ministries and the pathogens they aim to control easy to understand and fun to read this engaging primer on the etiology and pathogenesis of human disease will help you develop a basic understanding of pathology that will set you on the path to a successful career in the health professions punctuated by humor unique case studies that link pathology to real world clinical applications and absorbing tales from the history of medicine this engaging book focuses on the patient as it guides you through the causes and consequences of common diseases published in 2014 protein deimination in human health and disease was the first book on this novel post translational modification in which selected positively charged arginine amino acids are converted to neutral citrulline amino acids by the peptidyl arginine deiminase pad family of enzymes this area of research continues to expand rapidly necessitating the need for this second edition chronicling the latest inflammatory epigenetic neurodegenerative and carcinogenic processes protein deimination in human health and disease second edition updates the latest advances in deimination research including new information on pad enzyme structure and activity and how pad knock out animals are being used to study known and newly discovered links to various human diseases the first edition outlined what was known about citrullinated proteins in normal tissues such as skin and hair as well as in maladies such as rheumatoid arthritis ra multiple sclerosis ms alzheimer s disease ad glaucoma peripheral nerve injury neonatal hypoxic brain damage and breast cancer this second edition addresses numerous additional disorders such as diabetes asthma traumatic brain injury inflammatory bowel disease lupus bone disease heart failure fronto temporal dementia and prostate and colon cancer it also provides updates on the deimination research covering the three seminal diseases first linked to this process ra ms and ad and details how auto antibodies against citrullinated proteins contribute to disease in addition new hypotheses on the possible pathologic mechanisms of citrullinated myelin basic protein and glial fibrillary acidic protein are also proposed this second edition also outlines the latest developments in therapeutic strategies including the use of new pad antagonists and innovative techniques such as micro vesicles and stem cells as possible mechanisms to treat these conditions ocular surface disease cornea conjunctiva and tear film incorporates current research and the latest management strategies as well as classification systems and treatment paradigms for all forms of ocular surface disease this is the first comprehensive resource that helps you to meet ocular surface disease challenges effectively using today s best medical and surgical approaches get the complete evidence based guidance you need to provide optimal care for your patients with ocular surface disease implement the latest drug treatments and surgical interventions to provide better outcomes with fewer complications hone and expand your surgical skills by watching videos of leading experts performing advanced procedures including ocular surface transplantation techniques amniotic membrane transplantation pterygium surgery lamellar keratoplasty dalk in ocular surface disease and keratoprosthesis surgery visualize how to proceed by reviewing detailed full color images and consulting new classification systems and treatment paradigms for mild to severe forms of ocular surface disease take it with you anywhere access the full text downloadable image library video clips and more online at expertconsult com 1892 1894 1894 1896 include also the transactions of the second and fourth annual sanitary conventions held at san josé april 16 1894 and los angeles april 20 1896 ?????????????? ?142????????????????

The Plant Disease Reporter

1977

cardiovascular disease is the leading cause of death in women in the us with more women dying from heart disease than men women may have different presentation from men and often need a different approach to diagnosis and treatment there are also unique topics of management of heart disease in women including issues during pregnancy lactation and menopause many different health care providers as well as cardiologists are involved in treating these patients a manual reviewing diagnosis and treatment of cardiac disease in women would help providers without specific cardiology training to deliver care with greater efficiency a practical and comprehensive guide geared towards these providers would be a highly practical and valuable resource that would be utilized in everyday practice in offices that include urban clinics general medicine offices obstetrics and gynecology offices as well as in the surgical subspecialties this book will be a highly practical resource that can be directly applied to the issues that arise in everyday practice there is no available book on the market that focuses on a broader approach to cardiac disease in women or focuses on non cardiology providers and their trainees who have the need to know more about treatment of cardiovascular disease in women

Management of Cardiovascular Disease in Women
