for many reasons this decade is a time of rethinking many things there is the impending turn of the millenium an event packed with meaning there is recent political history which has changed the global structure of power in ways few could foresee and there is an economic fluidity worldwide that makes every day unpredictable and the future uncertain there are movements of people and surges of violence that seem unparalleled and well may be we are awash in change and people everywhere are trying to understand that and read its implications it is a time that provokes soul searching backward into the lessons and achievements of the past and forward into ways for the future to be better the fields of health and social development are no exception more specifically events and conditions in the health sector point to the need to rethink some large issues nations everywhere are grappling with the economic and ethical dilemmas of achieving and maintaining healthy populations since these are both cause and consequence of true development increasingly the thinking is global because there are comparisons to be learned from connections that have implications obligations to fulfill and costs that are somehow shared as part of this

dynamic there has been an explosion of analytic documents published since the start of this decade that deal mainly though not exclusively with health in developing countries the purpose of global health in transition is to distill the essential elements from those efforts discuss the major ideas they share and the thoughts they prompt ask what those might mean for a next agenda in global health and comment on the shifting context in which our current concepts of the ideal will prove or not prove their adequacy for the future

in turning the world upside down nigel crisp argued that the most affluent and powerful countries in the world can learn a great deal about health from lower income countries with their different insights and experiences and their ability to innovate free from vested interests and received wisdom in turning the world upside down again he argues that they

need to go further and listen to and learn from disempowered communities in their own countries he describes how combining the learning from different countries and communities can lead us to a new ecologically based vision for health and new and practical ways of improving health for ourselves our communities and our planet this second edition 12 years after the first is extensively re written and fully updated drawing on examples from around the world and reflecting what has already been learned from the covid 19 pandemic and from the onset of climate change turning the world upside down again continues the search for understanding begun in the first edition and describes how western scientific medicine which has served us so well in the 20th century must adapt and evolve further and faster to cope with the demands of the 21st century

during his training neurosurgeon robert j dempsey m d was told that global health was something for infectious diseases and not possible in super specialties this is the story of questioning that belief of addressing a massive need by working in the areas of need going to numerous ministers of health worldwide and showing them that with the training of even a few neurosurgeons we can complete a trauma system in their country the result is now we can also provide care for cancer stroke and congenital defects of newborn children where it was previously impossible in 2015 the lancet commission s report predicted over the next few years 47 million unnecessary deaths worldwide due to the lack of essential surgeries this book relates the importance of rectifying that ongoing tragedy and more

importantly the humanizing influences that such a journey has had on a super specialist working with the people of greatest need it concludes that in spite of massive need the present situation is actually very hopeful as we have shifted the focus of global health from service alone to partnered teaching leading us now to self sustaining systems of care delivered for and by the people in the regions of need global neurosurgery covers the thought provoking and often frightening lessons learned over four decades of neurosurgical involvement in global health working from a period when little or none existed to the present state of specialized healthcare in the area of need this process starts in the u s and then addresses health disparity on four continents and now on u s tribal reservations it emphasizes the importance of first listening then partnering with government medical societies universities and private foundations and most importantly learning from mistakes the programs developed allow the recipients of the care to take over the training so that it becomes about them and their patients in their home lands it will appeal to a wide audience because its stories explain actual worldwide health conditions while giving an insight valuable to the professional or lay person into the experiences and operating rooms of a neurosurgeon working under very difficult conditions
