what is architectural history considers the questions and problems posed by architectural historians since the rise of the discipline in the late nineteenth century how do historians of architecture organise past time and relate it to the present how does historical evidence translate into historical narrative should architectural history be useful for practicing architects if so how leach treats the disciplinarity of architectural history as an open question moving between three key approaches to historical knowledge of architecture within art history as an historical specialisation and most prominently within architecture he suggests that the confusions around this question have been productive ensuring a rich variety of approaches to the project of exploring architecture historically read alongside introductory surveys of western and global architectural history this book will open up questions of perspective frame and intent for students of architecture art history and history graduate students and established architectural historians will find much in this book to fuel discussions over the current state of the field in which they work

excavations at pompeii have been going on for more than two centuries since 1748 and discoveries there have regularly produced new and important information about ancient roman life the site holds a rich concentration of municipal buildings houses of every size and condition villas and tombs now in paperback the first book of this century written in english devoted to pompeian architecture and urban development tells the story of the city and its buildings with text and illustrations l richardson jr portrays pompeii in context as a keystone in the architectural history of antiquity pompeii s life was comparatively short from its meteoric rise as a seaport and shipbuilding center during the first punic war until its abrupt destruction with the eruption of vesuvius in a d 79 the city passed through four major building periods after a general introduction to pompeii s history and geography the book proceeds through each period discussing its public buildings private buildings and tombs each building is described and placed according to its importance in the development of its particular architectural form richardson offers new dates and arrives at new conclusions about the

development of such important features as the city plan fortifications and the atrium peristyle house fifty ground plans and twenty five photographs illustrate the text there has long been a need for a comprehensive account in english of the architecture and urban development of pompeii richardson s book makes a valiant effort to remedy the deficiency and will be particularly welcome to all students of roman architecture classical review

architectural history is more than just the study of buildings architecture of the past and present remains an essential emblem of a distinctive social system and set of cultural values and as a result it has been the subject of study of a variety of disciplines but what is architectural history and how should we read it reading architectural history examines the historiographic and socio cultural implications of the mapping of british architectural history with particular reference to eighteenth and nineteenth century britain discursive essays consider a range of writings from biographical and social histories to visual surveys and guidebooks to examine the narrative structures of histories of architecture and their impact on perception and understanding of the architecture of the past alongside this each chapter cites canonical histories juxtaposed with a range of social and cultural theorists to reveal that these writings are richer than we have perhaps recognised and that architectural production in this period can be interrogated in the same way as that from more recent past and can be read in a variety of ways the essays and texts combine to form an essential course reader for

methods and critical approaches to architectural history and more generally as examples of the kind of evidence used in the formation of architectural histories while also offering a thematic introduction to architecture in Britain and its social and cultural meaning

## **Pompeii 1988**

things fall apart but in his innovative wide ranging and well illustrated book Daniel Abramson investigates the American definition of what falling apart entails we build new buildings partly in response to demand but even more because we believe that existing buildings are slowly becoming obsolete and need to be replaced Abramson shows that our idea of obsolescence is a product of our tax code which was shaped by lobbying from building interests who benefit from the idea that buildings depreciate and need to be replaced the belief in depreciation is not held worldwide which helps explain why preservation movements struggle more in America than elsewhere Abramson's tour of our idea of obsolescence culminates in an assessment of recent tropes of sustainability which struggle to cultivate the idea that the greenest building is the one that already exists

how do we think about architecture historically and theoretically forty ways to think about architecture provides an introduction to some of the wide ranging ways in which architectural history and theory are being approached today the inspiration for this project is the work of adrian forty professor of architectural history at the bartlett school of architecture university college london ucl who has been internationally renowned as the uk s leading academic in the discipline for 40 years forty s many publications notably objects of desire 1986 words and buildings 2000 and concrete and culture 2012 have been crucial to opening up new approaches to architectural history and theory and have helped to establish entirely new areas of study his teaching at the bartlett has enthused a new generation about the exciting possibilities of architectural history and theory as a field this collection takes in a total of 40 essays covering key subjects ranging

from memory and heritage to everyday life building materials and city spaces as well as critical theory philosophy literature and experimental design it refers to more immediate and topical issues in the built environment such as globalisation localism regeneration and ecologies concise and engaging entries reflect on architecture from a range of perspectives contributors include eminent historians and theorists from elsewhere such as jean louis cohen briony fer hilde heynen mary mcLeod griselda pollock penny sparke and anthony vidler as well as forty s colleagues from the bartlett school of architecture including iain borden murray fraser peter hall barbara penner jane rendell and andrew saint forty ways to think about architecture also features contributions from distinguished architects such as tony fretton jeremy till and sarah wigglesworth and well known critics and architectural writers such as tom dyckhoff william menking and thomas weaver many of the contributors are former students of adrian forty through these diverse essays readers are encouraged to think about how architectural history and theory relates to their own research and design practices thus using the work of adrian forty as a catalyst for fresh and innovative thinking about architecture as a subject

## **L.A. Lost & Found 2000**

over the past two decades scholarship in architectural history has transformed moving away from design studio pedagogy and postmodern historicism to draw instead from trends in critical theory focusing on gender race the environment and more recently global history connecting to revisionist trends in other fields with examples across space and time from medieval european coin trials and

eighteenth century haitian revolutionary buildings to weimar german construction firms and present day african refugee camps writing architectural history considers the impact of these shifting institutional landscapes and disciplinary positionings for architectural history contributors reveal how new methodological approaches have developed interdisciplinary research beyond the traditional boundaries of art history departments and architecture schools and explore the challenges and opportunities presented by conventional and unorthodox forms of evidence and narrative the tools used to write history

the buildings of the smithsonian institution not only contain impressive collections they are themselves icons of great cultural significance many of them part of the historic national mall the smithsonian s unique buildings illustrate the changing styles and sensibilities of america as an evolving nation representing the work of major architects each building evokes a specific time in history the mid 19th century turreted castle the sky reflecting mid century modern air and space museum and the golden undulating 21st century american indian museum

## **Principles of Architectural History 1968**

from fort to port covers the architectural history of the city of mobile alabama from the time of the french fort of 1711 to the end of world war i in 1918 the text with 332 illustrations traces the history of mobile s architecture

from the town's beginnings as a colonial military outpost to its establishment as a modern commercial port city included is a record of the evolution of commercial, civic, religious, and residential buildings as they were affected by the environment by building practices and by the historical and social changes brought about through two centuries.

□□□□□□ **2016-12-10**

The aim of this work has been to sketch the various periods and styles of architecture with the broadest possible strokes and to mention with such brief characterization as seemed permissible or necessary the most important works of each period or style. Extreme condensation in presenting the leading facts of architectural history has been necessary and much that would rightly claim place in a larger work has been omitted here. The danger was felt to be rather in the direction of too much detail than of too little. While the book is intended primarily to meet the special requirements of the college student, those of the general reader have not been lost sight of. The majority of the technical terms used are defined or explained in the context and the small remainder in a glossary at the end of the work. Extended criticism and minute description were out of the question and discussion of controverted points has been in consequence as far as possible avoided. The illustrations have been carefully prepared with a view to elucidating the text rather than for pictorial effect. With the exception of some fifteen cuts reproduced from Lubke's *Geschichte der Architektur* by kind permission of Messrs. Seemann of Leipzig, the illustrations are almost all entirely new. A large number are from original drawings made by myself or under my direction and the remainder are with a few

exceptions half tone reproductions prepared specially for this work from photographs in my possession acknowledgments are due to messrs h w buemming h d bultman and a e weidinger for valued assistance in preparing original drawings and to professor w r ware to professor w h thomson m d and to the editor of the series for much helpful criticism and suggestion it is hoped that the lists of monuments appended to the history of each period down to the present century may prove useful for reference both to the student and the general reader as a supplement to the body of the text a d f hamlin columbia college new york january 20 1896 the author desires to express his further acknowledgments to the friends who have at various times since the first appearance of this book called his attention to errors in the text or illustrations and to recent advances in the art or in its archaeology deserving of mention in subsequent editions as far as possible these suggestions have been incorporated in the various revisions and reprints which have appeared since the first publication a d f h columbia university october 28 1907 general bibliography this includes the leading architectural works treating of more than one period or style the reader should consult also the special references at the head of each chapter valuable material is also contained in the leading architectural periodicals and in monographs too numerous to mention dictionaries and encyclopedias agincourt history of art by its monuments london architectural publication society dictionary of architecture london

# ***Architecture 2012-08-01***

the history of modern architecture as constructed by historians and key texts writing according to panayotis tournikiotis has always exerted a powerful influence on architecture indeed the study of modern architecture cannot be separated from a fascination with the texts that have tried to explain the idea of a new architecture in a new society during the last forty years the question of the relationship of architecture to its history of buildings to books has been one of the most important themes in debates about the course of modern architecture tournikiotis argues that the history of modern architecture tends to be written from the present projecting back onto the past our current concerns so that the beginning of the story really functions as a representation of its end in this book the buildings are the quotations while the texts are the structure tournikiotis focuses on a group of books by major historians of the twentieth century nikolaus pevsner emil kaufmann sigfried giedion bruno zevi leonardo benevolo henry russell hitchcock reynner banham peter collins and manfredo tafuri in examining these writers thoughts he draws on concepts from critical theory relating architecture to broader historical models

this book examines the career and publications of the french architect julien david leroy 1724 1803 and his impact on architectural theory and pedagogy despite not leaving any built work leroy is a major international figure of eighteenth century architectural theory and culture considering the place that leroy occupied in various intellectual circles of the enlightenment and revolutionary period this book examines the sources for his ideas about architectural history and theory and defines his impact on subsequent architectural thought this book will be of key interest to graduate students and scholars of enlightenment era architectural history

## **A Text-book of the History of Architecture 1898**

using empathy as established by the vienna school of art history complemented by insights on how the mind processes visual stimuli as demonstrated by late 19th century psychologists and art theorists this book puts forward an innovative interpretative method of decoding the forms and spaces of modern buildings this method was first developed as scholars realized that the new abstract art appearing needed to be analysed differently than the previous figurative works since architecture experienced a similar development in the 1920s and 30s this book argues that the empathetic method can also be used in

architectural interpretation while most existing scholarship tends to focus on formal and functional analysis this book proposes that modern architecture is too diverse to be reduced to a few common formal or ornamental features instead by relying on the viewer's innate psycho-physiological perceptive abilities sensual and intuitive understandings of composition form and space are emphasized these aspects are especially significant because modern architecture lacks the traditional stylistic signs including building analyses it shows how by visually reducing cubical forms and spaces to linear configurations the exteriors and interiors of modern buildings can be interpreted via human perceptive abilities as dynamic movement systems commensurate with the new industrial transportation age this reveals an inner necessity these buildings express about themselves and their culture rather than just an explanation of how they are assembled and how they should be used the case studies highlight the contrasts between buildings designed by different architects rather than concentrating on the few features that relate them to the zeitgeist it analyses the buildings directly as the objects of study not indirectly as designs filtered through a philosophical or theoretical discourse the book demonstrates that with technology and science affecting culture

## **Essays in Early American Architectural History 2011**

bringing together fourteen original essays this collection opens up new perspectives on the architectural history of the nineteenth century by examining the buildings of the period through the lens of experience with a focus on the

experience of the ordinary building user rather than simply on the intentions of the designer the book shows that new and important insights can be brought to our understanding of victorian architecture the chapters present a range of ideas and new research some examining individual building case studies from grand hotels and clubhouses in new york to the parliament buildings of westminster and others exploring conceptual questions about the nature of architectural experience whether sensory or otherwise yet they share the premise that the idea of the experience of architecture took on a new and particular significance with the rise of industrial modernity and they examine what contemporary people both architects and non architects understood by this idea the insights in this volume extend beyond the study of victorian architecture together they suggest how experience might be used as a framework to produce a more convincingly historical account of the artefacts of architectural history
