The New Urban Economics

2013-04-15

this book was first published in 1977 urban economics is a relatively young field of economics hardly existing except perhaps in real estate and land economics curricula before the 1960s within the last few years especially after 1971 there has been a growth of interest in urban economic theory strong enough even to attract the attention of general economic theorists these new theoretical writings have been named the new urban economics nue for short the aim of this monograph is to survey and assess nue to evaluate its contribution to urban economics to offer a few extensions and to say something about the future direction of the subfield

Economic Theory and the Cities

2014-06-28

the second edition of economic theory and the cities has been revised and expanded with both the graduate student and the practicing professional in mind providing a state of the art synthesis of important theoretical topics in urban economics the volume emphasizes the fundamental links between urban economics and new developments in mainstream economic theory from the preface in this book i present what i believe to be the most important theoretical topics in urban economics since urban economics is a rather diffuse field any presentation is necessarily selective reflecting personal tastes and opinions given that i note on what basis i chose the material that is presented and developed first the basic spatial model of a monocentric city is presented since it lays the foundation for thinking about many of the topics in urban economics the consideration of space and spatial proximity is one central feature of urban economics that distinguishes it from other branches of economics the positive and negative externalities generated by activities locating in close spatial proximity are central to analysis of urban phenomena however in writing this book i have tried to maintain strong links between urban economics and recent developments in mainstream economic theory this is reflected in the chapters that follow which present models of aspects of the most important topics in urban economics externalities housing transportation local public finance suburbanization and community development in these chapters concepts from developments in economics over the last decade or so are woven into the traditional approaches to modeling these topics examples are the role of contracts in housing markets and community development portfolio analysis in analyzing housing tenure choice and investment decisions the time inconsistency problem in formulating long term economic relationships between communities developers and local governments search in housing markets and dynamic analysis in housing markets and traffic scheduling the book ends with chapters on general equilibrium models of systems of cities demonstrating how individual cities fit into an economy and interact with each other this book is written both as a reference book for people in the profession and for use as a graduate text in this edition a strong effort has been made to present the material at a level and in a style suitable for graduate students the edition has greatly expanded the sections on housing and local public finance so these sections could be studied profitably by a broad range of graduate students recommended prerequisites are an undergraduate urban economics course and a year of graduate level microeconomic theory it is possible that the book can be used in very advanced undergraduate courses if the students are well versed in microeconomics and are quantitatively oriented focus on the basic spatial model of the monocentric city expanded sections on housing and local public finance discussion of the critical role of spatial proximity of different economic activities such as housing transportation and community development

Urban Economics

1978

an examination of the economic reasons determining choice of location develops through analysis of the bid rent function a unified theory of urban land use and city size

Urban Economic Theory

1990

four decades

Modelling in Urban and Regional Economics

2013-06-17

first published in 2001 routledge is an imprint of taylor francis an informa company

Systems of Cities and Facility Location

2013-09-13

urban models can be divided into explanatory or policy oriented classifications explanatory models are usually systematic attempts at explaining urban form operational models on the other hand rely on either social physics or behavior principles explanatory models focus on the tradeoffs between the cost of the site itself and the costs of travel the analytic problems caused by the unique quality of each location the effects of transport congestion on city form and the consequences of welfare emphasis on equity the social physics form of operational models tries to replicate statistical regularities observed in the activities of people within a city economic models based on behavioral principles are the easiest to understand because their structure is drawn from behavioral relations derived from behavioral analysis the characteristics of operational and explanatory models overlap two operational and two explanatory models are presented as exemplary techniques for modeling urban areas in developing countries useful explanatory models are likely to require large sets of disaggregated data in order to provide the building blocks for the operational models

Urban Economic and Planning Models

1979

this second volume of the handbook presents professional surveys of all the important topics in urban economics the first section contains 6 surveys on locational analysis the second 5 surveys of specific urban markets and the third part presents 5 surveys of government policy issues the book brings together exhaustive research by distinguished scholars from many countries it is the only complete survey volume of urban economics and should serve as a reference volume to scholars and graduate students for many years for more information on the handbooks in economics series please see our home page on elsevier nl locate hes

Handbook of Regional and Urban Economics

1986

over more than two centuries the development of economic theory has created a wide array of different concepts theories and insights my recent books capital and knowledge zhang 1999 and a theory of international trade zhang 2000 show how separate economic theories such as the marxian economics the keynesian economics the general equilibrium theory the neoclassical growth theory and the neoclassical trade theory can be examined within a single theoretical framework this book is to further expand the framework proposed in the previous studies this book is a part of my economic theory with endogenous population capital knowledge preferences sexual division of labor and consumption institutions economic structures and exchange values over time and space zhang 1996a as an extension of the capital and knowledge which is focused on the dynamics of national economies this book is to construct a theory of urban economies we are concerned with dynamic relations between division of labor division of consumption and determination of prices structure over space we examine dynamic interdependence between capital accumulation knowledge creation and utilization economic growth price

structures and urban pattern formation under free competition the theory is constructed on the basis of a few concepts within a compact framework the comparative advantage of our theory is that in providing rich insights into complex spatial economies it uses only a few concepts and simplified functional forms and accepts a few assumptions about behavior of consumers producers and institutional structures

An Economic Theory of Cities

2012-12-06

this publication is a result of a 2 year innovative exploratory and reflective study of cities as unique urban spaces that support life work and play it responds to major issues that affect the quality of life of urban residents this publication offers practical ways on how urban managers urban practitioners businesspeople and citizens can engage to make cities more livable by building on their distinctive physical social cultural and economic characteristics with the adoption of the sustainable development goals by the united nations the book comes at the right time to offer integrated urban development solutions that can translate global development commitments into urban level actions to achieve livable cities

The New Urban Economics

1977

Handbook of Regional and Urban Economics

1986

this up to date third edition provides an accessible introduction to urban and geographical economics using real world examples and key models

The Economy of Green Cities

2012-11-06

a collection of the first section of the fundamentals of pure and applied economics series regional and urban economics parts one and two is an encyclopaedia containing eight titles this volume highlights original contributions in regional and urban economics concentrating mainly on urban economic theory the contributions focus on the treatment of space in economic theory drawing on the body of literature developed by von thunen christaller and losch these chapters explore empirical theoretical and applied aspects of urban and regional economics which can be divided into the following areas location theory jean jaskold gabszewicz jacques francois thisse masahisa fujita and urs schwiezer urban public finance david e wildasin urban dynamics and urban externalities takahiro miyao and yoshitsugu kanemoto systems of cities and facility location

An Introduction to Geographical and Urban Economics

2019-12-12

developments in methodologies agglomeration and a range of applied issues have characterized recent advances in regional and urban studies volume 5 concentrates on these developments while treating traditional subjects such as housing the costs and benefits of cities and policy issues beyond regional inequalities contributors make a habit of combining theory and empirics in each chapter guiding research amid a trend in applied economics towards structural and quasi experimental approaches clearly distinguished from the new economic geography covered by volume 4 these articles feature an international approach that positions recent advances within the discipline of economics and society at large emphasizes advances in applied econometrics and the blurring of within and between cities promotes the integration of theory and empirics in most chapters presents new research on housing especially in macro and international finance contexts

Regional and Urban Economics Parts 1 & 2

2013-06-20

the montgomery bus boycott student nonviolent coordinating committee sncc and brown v board of education reveal incentives to reform as a result of economic political and legal threat it is difficult to change a person s heart or to change based on moral conviction alone however policies and laws can be established that will change a person s behavior historically there was rarely a time where societal changes were the result of a desire to do what was morally right doing what is right was contingent upon economic advantages political motivation or the threat of litigation by the mid 1900s the naacp had learned a valuable lesson in the south that litigation or the threat of litigation was an effective tool in the quest for educational equality douglas 1995 more recently the metoo movement and the los angeles teacher s strike exposed corrupt behavior and insufficient working environments that have existed for decades what is different they have been exposed through political economic and legal means as it pertains to educating african americans there was an ongoing role of servitude in the political economy of the south anderson 1988 this was subsequently disrupted through political economic and legal measures during reconstruction racist ideologies and economic advantages were seen through jim crow laws roback 1984 that were again disrupted through political economic and legal methods education has also been cited as what perpetuates our democracy it is institutions that afford its

citizens the skills and knowledge necessary for political participation rury 2002 even when legal cases are unsuccessful such as puitt v commissioners of gaston county or plessy v ferguson they can forge the way to successful litigation dismantling racist ideologies that oppress african americans although the puitt decision did not remove the processes of discrimination against black schools it left intact the legal basis on segregated and unequal education douglas 1995 as citizens it is imperative that we participate in the political process and use our authority to mandate the changes we would like to see in urban education when theorizing this book the intent was to provide an interdisciplinary look at solutions to critical issues in urban education through political economic and legal avenues this book seeks to provide an interdisciplinary approach to solving the issues in education while connecting it to the effects on teacher preparation using historical and recent examples scholars can piece together solutions that will guide others to political economic and legal action necessary to dismantle systems that have bound black and brown children it is our intent to offer innovative yet grounded solutions that can purposefully move the conversation about solutions to critical issues in education to political economic and legal actions

Handbook of Regional and Urban Economics

2015-06-29

neoclassical economics the intellectual bedrock of modern capitalism faces growing criticisms as many of its key assumptions and policy prescriptions are systematically challenged yet there remains one field of economics where these limitations continue virtually unchallenged the study of cities and regions in built environment economics in this book franklin obeng odoom draws on institutional georgist and marxist economics to clearly but comprehensively show what the key issues are today in thinking about urban economics in doing so he demonstrates the widespread tensions and contradictions in the status quo showing how to reconstruct urban economics in order to create a more just society and environment

Urban economics; theory, development and planning

1970

analyses the economic theory of urban land use in both its positive and normative aspects

Economic, Political and Legal Solutions to Critical Issues in Urban Education and Implications for Teacher Preparation

2022-06-01

Reconstructing Urban Economics

2016-08-15

this second edition arms real estate professionals with a comprehensive approach to the economic factors that both define and affect modern urban areas the text considers the economics of cities as a whole instead of separating them emphasis is placed on economic theory and empirical studies that are based in economic theory the book also explores the policy lessons that can be drawn from the use of economics to understand urban areas real estate professionals will find new coverage of urban areas around the world to provide a global perspective

Location Theory

2013-06-17

originally published in 1990 this work analyses the use of contemporary computer models to simulate urban systems the work deals with the two significant traditions of model building firstly the building of integrated models following the seminal research of lowry first published in 1964 but with relatively simple submodels and secondly intensive research on particular submodels with a variety of techniques this volume constructs a model building exercise which integrates the two traditions an integrated model in a modular form with alternative components using the most advanced submodels the book concludes with a presentation of an example of an operational model of this type

Public and Urban Economics

1976

the new handbook of regional and urban economics cities and geography reviews synthesizes and extends the key developments in urban and regional economics and their strong connection to other recent developments in modern economics of particular interest is the development of the new economic geography and its incorporation along with innovations in industrial organization endogenous growth network theory and applied econometrics into urban and regional economics the chapters cover theoretical developments concerning the forces of agglomeration the nature of neighborhoods and human capital externalities the foundations of systems of cities the development of local political institutions regional agglomerations and regional growth such massive progress in understanding the theory behind urban and regional phenomenon is consistent with on going progress in the field since the late 1960 s what is unprecedented are the developments on the empirical side the development of a wide body of knowledge concerning the nature of urban externalities city size distributions urban sprawl urban and regional trade and regional convergence as well as a body of knowledge on specific regions of the world europe asia and north america both current and historical the handbook is a key reference piece for anyone wishing to understand the developments in the field

Urban Economics and Public Policy

1974

the purpose of this book is to provide a key text on urban economics in a global context the book is driven by the themes of urban economics urban growth housing property investment and development etc and the different approaches to these themes taken in different regions of the world are introduced and exemplified in boxes within each chapter

Cities and Mega-Cities

2018-06-27

this book focuses on enhancing urban regeneration performance and strategies that pave the way toward sustainable urban development models and solutions the book at hand thoroughly examines the latest studies on the regeneration of urban areas and attempts at alleviating the negative impacts associated with high population density and urban heat effects it gathers contributions that combine theoretical reflections and international case studies on urban regeneration and transformation with the single goal of tackling existing social and economic imbalances and developing new solutions the primary audience of this book will be from the field of architecture and urban planning offering new insights on how to address the myriad of problems that our cities are facing

Urban Dynamics and Urban Externalities

2013-10-08

this edited collection first published in 1987 provides a comparative analysis of different approaches to urban modelling and lays the foundations for the possibility of integration and a more unified field the first part contextualises the development of the field of urban systems modelling focusing on the variety of approaches and possible implications of this on the future of research and methodology next the editors consider economic and non economic approaches followed by an analysis of spatial interaction based approaches providing an overview to the field and research literature the overarching argument is that there should be an integrated methodological approach to urban system modelling
