climate change is having an immediate and sometimes life threatening impact especially for older adults generally speaking people 65 or older older adults often face mobility cognitive and resource challenges which contribute to a disproportionate number of deaths in the face of major disasters but some challenges are less visible consider the grandparent who no longer can stand and wait at the bus stop because of the heat or the retiree who lives in a home with black mold due to chronic flooding that she can t afford to remediate or leave because of her limited fixed income our population is aging by 2034 the us will have more people over 65 than under 18 despite the evidence that climate change is severely impacting

older adults and the reality that communities will be confronted with more frequent and more severe disasters we are not prepared to address the needs of older adults and other vulnerable populations in the face of a changing climate in climate resilience for an aging nation community resilience and housing expert danielle arigoni argues that we cannot achieve true resilience until communities adopt interventions that work to meet the needs of their oldest residents she explains that when we plan for those most impacted by climate and for those with the greatest obstacles to opportunity and well being we improve conditions for all arigoni explores how to integrate age friendly resilience into community planning and disaster preparedness efforts through new planning approaches including an age friendly process and a planning framework dedicated to inclusive disaster recovery to create communities that serve the needs of older adults better not only during disasters but for all the days in between examples are woven throughout the book including case studies of age friendly resilience in action from new york state portland oregon and multnomah county and new orleans climate resilience for an aging nation will help professionals and concerned citizens understand how to best plan for both the aging of our population and the climate changes underway so that we can create safer more livable communities for all

a political science analysis of the feasibility and sustainability of carbon pricing drawing from north american european and asian case studies climate change economists generally agree is best addressed by putting a price on the carbon content of fossil fuels by taxing carbon by cap and trade systems or other methods but what about the politics of carbon pricing do political realities render carbon pricing impracticable in this book barry rabe offers the first major political science analysis of the feasibility and sustainability of carbon pricing drawing upon a series of real world attempts to price carbon over the last two decades in north america europe and asia rabe asks whether these policies have proven politically viable and if adopted whether they survive political shifts and managerial challenges over time the entire policy life cycle is examined from adoption through advanced implementation on a range of pricing policies including not only carbon taxes and cap and trade but also such alternative methods as taxing fossil fuel extraction these case studies rabe argues show that despite the considerable political difficulties carbon pricing can be both feasible and durable

across diverse disciplines the term resilience is appearing more and more often however while each discipline has developed theory and models to explain the resilience of the systems they study e g a natural environment a community post disaster the human mind a computer network or the economy there is a lack of over arching theory that describes 1 whether the principles that underpin the resilience of one system are similar or different from the principles that govern resilience of other systems 2 whether the resilience of one system affects the resilience of other co occurring systems and 3 whether a better understanding of resilience can inform the design of interventions programs and policies that address wicked problems that are too complex to solve by changing one system at a time in other words and as only one example among many are there similarities between how a person builds and sustains psychological resilience and how a forest community or the business where he or she works remains successful and sustainable during periods of extreme adversity does psychological resilience in a human being influence the resilience of the forests through a change in attitude towards conservation community through a healthy tolerance for differences and businesses by helping a workforce perform better with which a person interacts and finally does this understanding of resilience help build better social and physical ecologies that support individual mental health a sustainable environment and a successful economy at the same time

evidence based policymaking is often promoted within liberal democracies as the best means for government to balance political values with technical considerations under the evidence based mandate both experts and non experts often assume that policy problems are sufficiently tractable and that experts can provide impartial and usable advice to government so that problems like climate change adaptation can be effectively addressed at least where there is political will to do so this book compares the politics and science informing climate adaptation policy in australia and the uk to understand how realistic these expectations are in practice at a time when both academics and practitioners have repeatedly called for more and better science to anticipate climate change impacts and thereby to effectively adapt this book explains why a dearth of useful expert evidence about future climate is not the most pressing problem even when it is sufficiently credible and relevant for decision making climate science is often ignored or politicised to ensure the evidence based mandate is coherent with prevailing political economic and epistemic ideals there are other types of policy knowledge too that are arguably much more important this comparative analysis reveals what the politics of climate change mean for both the development of useful evidence and for the practice of evidence based policymaking
