 beginning with 1937 the april issue of each vol is the fleet reference annual this volume constitutes the thoroughly refereed conference proceedings of the 25th international conference on industrial engineering and other applications of applied intelligend systems iea aie 2012 held in dalian china in june 2012 the total of 82 papers selected for the proceedings were carefully reviewed and selected from numerous submissions the papers are organized in topical sections on machine learning methods cyber physical system for intelligent transportation applications ai applications evolutionary algorithms combinatorial optimization modeling and support of cognitive and affective human processes natural language processing and its applications social network and its applications mission critical applications and case studies of intelligent systems ai methods sentiment analysis for asian languages aspects on cognitive computing and intelligent interaction spatio temporal datamining structured learning and their applications decision making and knowledge based systems pattern recognition agent based systems decision making techniques and innovative knowledge management machine learning applications this volume includes versions of papers selected from those presented at the thiesel 2000 conference on thermo fluid dynamic processes in diesel engines held at the universidad politecnica de valencia during the period of september th th 13 to 15 2000 the papers are grouped into seven thematic areas state of the art and prospective fuels for diesel engines injection system and spray formation combustion and pollutant formation modelling experimental techniques and air management these areas cover most of the technologies and research strategies that may allow light duty and heavy duty diesel engines to comply with current and forthcoming emission standards while maintaining or improving fuel consumption the main objectives of the conference were to bring together ideas and experience from industry and universities to facilitate interchange of information and to promote discussion of future research and development needs the technical papers emphasised the use diagnostic and simulation techniques and their relationship to engineering practice and the advancement of the diesel engine we hope that this approach which proved to be successful at the conference is reflected in this volume we thank all those who contributed to the success of the conference and particularly the members of the advisory committee who assessed abstracts and chaired many of the technical sessions we are also grateful to participants who presented their work or contributed to the many discussions finally the conference benefitted from financial support from the organisations listed below and we are glad to have this opportunity to record our gratitude
 this book presents select proceedings of the international conference on energy conversion and thermo fluid systems i conects 2021 it covers the latest trends in the areas of energy conversion and thermo fluid systems the topics covered include enhanced heat transfer multi phase flows power generation technologies fluid structure interaction alternative fuels micro and nano scale heat and mass transfer energy emissions control technologies etc the book will be a valuable reference for the researchers and professionals interested in the energy conversion technologies and allied fields

 fuzzy cognitive maps fcm constitute cognitive models in the form of fuzzy directed graphs consisting of two basic elements the nodes which basically correspond to concepts bearing different states of activation depending on the knowledge they represent and the edges denoting the causal effects that each source node exercises on the receiving concept expressed through weights weights take values in the interval 1 1 which denotes the positive negative or neutral causal relationship between two concepts an fcm can be typically obtained through linguistic terms inherent to fuzzy systems but with a structure similar to the neural networks which facilitates data processing and has capabilities for training and adaptation during the last 10 years an exponential growth of published papers in fcms was followed showing great impact potential different fcm structures and learning schemes have been developed while numerous studies report their use in many contexts with highly successful modeling

results the aim of this book is to fill the existing gap in the literature concerning fundamentals models extensions and learning algorithms for fcms in knowledge engineering it comprehensively covers the state of the art fcm modeling and learning methods with algorithms codes and software tools and provides a set of applications that demonstrate their various usages in applied sciences and engineering db apache php perl java v5

the okb 586 yuzhnoye design office located in dnipro ukraine has developed a large number of military rockets space launchers and satellites including the cosmos and intercosmos series thousands of yuzhnoye rockets and satellites have been mass produced by factory no 586 yuzhmach this company celebrated its 70th anniversary in 2021 and was run from 1954 to 1971 by mikhail yangel one of the three great soviet creators of cosmic rocket technology alongside sergei korolev and vladimir chelomey yuzhnoye launchers and satellites covers 40 years of programs carried out during the soviet period which was marked by the nuclear arms race and the space race between the united states and the soviet union and 30 years of the ukrainian period characterized by cooperation with the west and opening up commercialization the book incorporates the latest information from declassified archives this book presents the proceedings of the 11th iftomm international conference on rotordynamics held in beijing china on 18 21 september 2023 this conference is a premier global event that brings together specialists from the university and industry sectors worldwide in order to promote the exchange of knowledge ideas and information on the latest developments and applied technologies in the dynamics of rotating machinery the coverage is wide ranging including for example new ideas and trends in various aspects of bearing technologies issues in the analysis of blade dynamic behavior condition monitoring of different rotating machines vibration control electromechanical and fluid structure interactions in rotating machinery rotor dynamics of micro nano and cryogenic machines and applications of rotor dynamics in transportation engineering since its inception 32 years ago this conference has become an irreplaceable point of reference for those working in the field and this book reflects the high quality and diversity of content that the conference continues to guarantee popular science gives our readers the information and tools to improve their technology and their world the core belief that popular science and our readers share the future is going to be better and science and technology are the driving forces that will help make it better

Thermo-and Fluid-dynamic Processes in Diesel Engines 2002-01-11

this volume includes versions of papers selected from those presented at the thiesel 2000 conference on thermofluiddynamic processes in diesel engines held at the universidad politecnica de valencia during the period of september th th 13 to 15 2000 the papers are grouped into seven thematic areas state of the art and prospective fuels for diesel engines injection system and spray formation combustion and pollutant formation modelling experimental techniques and air management these areas cover most of the technologies and research strategies that may allow light duty and heavy duty diesel engines to comply with current and forthcoming emission standards while maintaining or improving fuel consumption the main objectives of the conference were to bring together ideas and experience from industry and universities to facilitate interchange of information and to promote discussion of future research and development needs the technical papers emphasised the use diagnostic and simulation techniques and their relationship to engineering practice and the advancement of the diesel engine we hope that this approach which proved to be successful at the conference is reflected in this volume we thank all those who contributed to the success of the conference and particularly the members of the advisory committee who assessed abstracts and chaired many of the technical sessions weare also grateful to participants who presented their work or contributed to the many discussions finally the conference benefitted from financial support from the organisations listed below and we are glad to have this opportunity to record our gratitude

Emerging Trends in Energy Conversion and Thermo-Fluid Systems 2022-08-20

the okb 586 yuzhnoye design office located in dnipro ukraine has developed a large number of military rockets space launchers and satellites including the cosmos and intercosmos series thousands of yuzhnoye rockets and satellites have been mass produced by factory no 586 yuzhmach this company celebrated its 70th anniversary in 2021 and was run from 1954 to 1971 by mikhail yangel one of the three great soviet creators of cosmic rocket technology alongside sergei korolev and vladimir chelomey yuzhnoye launchers and satellites covers 40 years of programs carried out during the soviet period which was marked by the nuclear arms race and the space race between the united states and the soviet union and 30 years of the ukrainian period characterized by cooperation with the west and opening up commercialization the book incorporates the latest information from declassified archives

Energy Research Abstracts 1990

this book presents the proceedings of the 11th iftomm international conference on rotordynamics held in beijing china on 18 21 september 2023 this conference is a premier global event that brings together specialists from the university and industry sectors worldwide in order to promote the exchange of knowledge ideas and information on the latest developments and applied technologies in the dynamics of rotating machinery the coverage is wide ranging including for example new ideas and trends in various aspects of bearing technologies issues in the analysis of blade dynamic behavior condition monitoring of different rotating machines vibration control electromechanical and fluid structure interactions in rotating machinery rotor dynamics of micro nano and cryogenic machines and applications of rotor dynamics in transportation engineering since its inception 32 years ago this conference has become an irreplaceable point of reference for those working in the field and this book reflects the high quality and diversity of content that the conference continues to guarantee
