1 renewal of life by transmission the most notable distinction between living and inanimate things is that the former maintain themselves by renewal a stone when struck resists if its resistance is greater than the force of the blow struck it remains outwardly unchanged otherwise it is shattered into smaller bits never does the stone attempt to react in such a way that it may maintain itself against the blow much less so as to render the blow a contributing factor to its own continued action while the living thing may easily be crushed by superior force it none the less tries to turn the energies which act upon it into means of its own further existence if it cannot do so it does not just split into smaller pieces at least in the higher forms of life but loses its identity as a living thing as long as it endures it struggles to use surrounding energies in its own behalf it uses light air moisture and the material of soil to say that it uses them is to say that it turns them into means of its own conservation as long as it is growing the energy it expends in thus turning the environment to account is more than compensated for by the return it gets it grows understanding the word control in this sense it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would

otherwise use it up life is a self renewing process through action upon the environment in all the higher forms this process cannot be kept up indefinitely after a while they succumb they die the creature is not equal to the task of indefinite self renewal but continuity of the life process is not dependent upon the prolongation of the existence of any one individual reproduction of other forms of life goes on in continuous sequence and though as the geological record shows not merely individuals but also species die out the life process continues in increasingly complex forms as some species die out forms better adapted to utilize the obstacles against which they struggled in vain come into being continuity of life means continual readaptation of the environment to the needs of living organisms we have been speaking of life in its lowest terms as a physical thing but we use the word life to denote the whole range of experience individual and racial when we see a book called the life of lincoln we do not expect to find within its covers a treatise on physiology we look for an account of social antecedents a description of early surroundings of the conditions and occupation of the family of the chief episodes in the development of character of signal struggles and achievements of the individual s hopes tastes joys and sufferings in precisely similar fashion we speak of the life of a savage tribe of the athenian people of the american nation life covers customs institutions beliefs victories and defeats recreations and occupations

lawrence stenhouse was one of the most distinguished original and influential educationalists of his generation his theories about curriculum curriculum development pedagogy teacher research and research as a basis for teaching remain compelling and fresh and continue to be a counterpoint to instrumental and technocratic thinking in education in this book renowned educationalists describe stenhouse s contribution to education explore the contemporary relevance of his thinking and bring his work and legacy to the attention of a wide range of students teachers teacher educators and others involved in education stenhouse saw the primary aim of education as the development of individuality through a creative and critical engagement with culture he was an early advocate of inclusive education and was committed to making available to all pupils an education that was challenging and empowering for stenhouse many of the problems of education stemmed not so much from its content as from the terms and conditions under which students were required to access it consequently he pioneered an approach to curriculum reform that stressed the quality of the educational process and the values that defined it as opposed to rational curriculum planning which stressed the pre specification of measureable learning outcomes stenhouse devised the curriculum

reform movement's most ambitious strategy the process model and was its principal theorist his idea of the teacher as researcher lay at the heart of this strategy as the means by which the values that define a worthwhile educational process could be progressively realized by teachers in concrete forms of action within their classrooms and schools what marked out Stenhouse's unique contribution to the field of curriculum was his distinctive conceptualisation of the relationship between the teacher authority the learner autonomy and the subject matter understanding founded on his epistemological scepticism and forged in his encounters with expertly discerning teachers who valued and nurtured the intellectual independence of students Stenhouse acquired an acute appreciation of the ways in which teaching enhances or inhibits develops or displaces the potential for autonomous thinking of students he changed the relationship between curriculum theory educational research and teachers placing teachers right at the heart of the curriculum development process and the teacher as researcher at the heart of teacher professionalism

John Dewey (October 20, 1859 – June 1, 1952) was an American philosopher, psychologist, and educational reformer whose ideas have been influential in education and social reform. He is regarded as one of the most prominent American scholars in the first half of the twentieth century. The overriding theme of Dewey's works was his profound belief in democracy, be it in politics, education, or communication and journalism. As Dewey himself stated in 1888 while still at the University of Michigan, "democracy and the one ultimate ethical ideal of humanity are to my mind synonymous." Known for his advocacy of democracy, Dewey considered two fundamental elements, schools and civil society, to be major topics needing attention and reconstruction to encourage experimental intelligence and plurality. Dewey asserted that complete democracy was to be obtained not just by extending voting rights but also by ensuring that there exists a fully formed public opinion accomplished by communication among citizens, experts, and politicians, with the latter being accountable for the policies they adopt. Dewey was one of the primary figures associated with the philosophy of pragmatism and is considered one of the fathers of functional psychology. His paper, "The Reflex Arc Concept in Psychology," published in 1896, is regarded as the first major work in the Chicago functionalist school. A review of general psychology survey published in 2002 ranked Dewey as the 93rd most cited psychologist of the 20th century. Dewey was also a major educational reformer for the 20th century, a well-known public intellectual, and he was a major voice of progressive education and liberalism. While a professor at the University of Chicago, he founded the University of Chicago Laboratory Schools, where he was able to apply and test his progressive ideas on pedagogical method. Although Dewey is known best for his publications about education, he also wrote about many other topics, including epistemology, metaphysics, aesthetics, art, logic, social theory, and ethics.
