peter goldie opens the path to a deeper understanding of our emotional lives through a lucid philosophical exploration of this surprisingly neglected topic he illuminates the phenomena of emotion by drawing not only on philosophy but also on literature and science he considers the roles of culture and evolution in the development of our emotional capabilities he examines the links between emotion mood and character and places the emotions in the context of such related phenomena as consciousness thought feeling and imagination he explains how it is that we are able to make sense of our own and other

people's emotions and how we can explain the very human things which emotions lead us to do a key theme of the emotions is the idea of a personal perspective or point of view contrasted with the impersonal stance of the empirical sciences Goldie argues that it is only from the personal point of view that thoughts reasons feelings and actions come into view he suggests that there is a tendency for philosophers to over-intellectualize the emotions and investigates how far it is possible to explain emotions in terms of rationality over-intellectualizing can also involve neglecting the centrality of feelings and Goldie shows how to put them where they belong as part of the intentionality of emotional experience directed towards the world from a point of view Goldie argues that the various elements of emotional experience including thought feeling bodily change and expression are tied together in a narrative structure to make sense of one's emotional life one has to see it as part of a larger unfolding narrative the narrative is not simply an interpretative framework of a life it is what that life is Goldie concludes by applying these ideas in a close study of one particular emotion jealousy this fascinating book gives an accessible but penetrating exploration of a subject that is important but mysterious to all of us any reader interested in emotion and its role in our understanding of our lives will find much to think about here

understanding the educational experiences of imprisoned men explores how adult male prisoners interpret and give value to their experiences of education presenting an opportunity to consider how education can be beneficial to prisoners including

and beyond the enhancement of employability skills while the primary aim for education in prison has been to increase employability skills to prevent reoffending further attention needs to be given to the broader outcomes of educational experiences and the importance of the development of other personal attributes including self confidence empowerment and the ability to engage in positive relationships this book considers how education is also used by men in prison to cope with prison life to reconsider their identity and to develop and maintain relationships it also discusses the relationships that prisoners have with their teachers and other prison staff as well as the relationships that different types of prison staff have between each other in addition the role that education can play in the process of desistance from crime is discussed to provide an understanding of what changes occur in men who participate in educational courses this book will be of interest to not only students and scholars with an interest in imprisonment rehabilitation and criminal justice practice but also educationalists those who work in the prison setting and in social work it may also appeal to those involved in community development programmes and broader sociological research

in their book i want to tell you how i feel husband and wife psychologists deb brock and ron johnson provide a paradigm for understanding what may be the most important element of human psychology they suggest that people s feelings can be

understood valued and utilized in order to enliven them personally and enhance them interpersonally to such a degree that they can find true contentment meaning and satisfaction in life they have dared to unpack the murky waters of feelings with precision without falling prey to simplistic ideas of feelings nor complex neurological assessment of feelings the authors propose that if people grasp how they feel they will subsequently grasp how other people feel and in this interchange of feelings they will profoundly enhance communication and ultimately relationships johnson and brock propose a unique paradigm for understanding feelings by first suggesting that feelings while undefined are the most basic experience and expression of one s core self sometimes called soul or spirit the authors immediately admit to the undefined nature of such words as feelings core self soul or spirit but note that such elements of humanity can be understood and utilized just as the equally undefined words love time and distance are undefined while undefined feelings can be observed in their experience and expression which comes sequentially physically emotionally cognitively and actively thus an important concept that johnson and brock propose is that emotion is the second experience one has when experiencing or expressing feelings but not the entirety of one s feelings and for many people not the most important they suggest that some people are inclined to express or experience their feelings emotionally while others may be more inclined to physical manifestations cognition or activity in experience and expression of feelings the authors suggest a commensurate four part paradigm of personality temperament that often reflects one s preference for experiencing and expressing feelings they further delineate the four basic emotions suggesting that are love based emotions of joy and sadness and two defense based emotions of fear and anger with the groundwork of the book in this depth understanding of feelings emotions and personality temperament brock

and johnson present a myriad of scenarios between people demonstrating how to use their basic understanding of feelings in these later chapters the authors focus on practical down to earth examples of how people fail to communicate their feelings and examples of how they can succeed in feeling communication they suggest rules for engagement in one chapter they devote another chapter to the concept of emotional hurt which they suggest is often at the heart of miscommunication and suggest ways of understanding managing and communicating hurt before it turns to defensive based emotions of anger or fear drs johnson and brock have compiled a valuable book that is grounded in equal measures of science theory and their 100 years of experience in the field of psychology read this book and you will be compelled to think deeper feel deeper and communicate better

it is widely acknowledged that a central aim of science is to achieve understanding of the world around us and that possessing such understanding is highly important in our present day society but what does it mean to achieve this understanding what precisely is scientific understanding these are philosophical questions that have not yet received satisfactory answers while there has been an ongoing debate about the nature of scientific explanation since Carl Hempel advanced his covering law model in 1948 the related notion of understanding has been largely neglected because most philosophers regarded understanding as merely a subjective by-product of objective explanations by contrast this book puts scientific understanding center stage it is primarily a philosophical study but also contains detailed historical case studies of scientific practice in contrast to most existing studies in this area it takes into account scientists' views and analyzes their role in scientific debate and development the aim of understanding scientific understanding is to develop and defend a philosophical theory of scientific understanding that can describe and explain the historical variation of criteria for understanding actually employed by scientists the theory does justice to the insights of such famous physicists as Werner Heisenberg and Richard Feynman while bringing much needed conceptual rigor to their intuitions the scope of the proposed account of understanding is the natural sciences while the detailed case studies derive from physics examples from other sciences are presented to illustrate its wider validity

what does it mean to understand something what is the essence of understanding when compared across multiple domains varieties of understanding offers new and original work on the nature of understanding raising questions about what understanding looks like from different perspectives and exploring how ordinary people use the notion of understanding according to a long historical tradition understanding comes in different varieties in particular it is said that understanding people has a different epistemic profile than understanding the natural world that it calls on different cognitive resources and brings to bear distinctive normative considerations thus in order to understand people we might need to appreciate or in some way sympathetically reconstruct the reasons that led a person to act in a certain way by comparison when it comes to understanding natural events like earthquakes or eclipses no appreciation of reasons or acts of sympathetic reconstruction is arguably needed mainly because there are no reasons on the scene to even be appreciated and no perspectives to be

sympathetically pieced together this volume brings together some of the world's leading philosophers, psychologists and theologians in order to shed light on the various ways in which we understand the world pushing debates on this issue to new levels of sophistication and insight

a proposal that extends the enactive approach developed in cognitive science and philosophy of mind to issues in affective science in the feeling body giovanna colombetti takes ideas from the enactive approach developed over the last twenty years

in cognitive science and philosophy of mind and applies them for the first time to affective science the study of emotions moods and feelings she argues that enactivism entails a view of cognition as not just embodied but also intrinsically affective and she elaborates on the implications of this claim for the study of emotion in psychology and neuroscience in the course of her discussion colombetti focuses on long debated issues in affective science including the notion of basic emotions the nature of appraisal and its relationship to bodily arousal the place of bodily feelings in emotion experience the neurophysiological study of emotion experience and the bodily nature of our encounters with others drawing on enactivist tools such as dynamical systems theory the notion of the lived body neurophenomenology and phenomenological accounts of empathy colombetti advances a novel approach to these traditional issues that does justice to their complexity doing so she also expands the enactive approach into a further domain of inquiry one that has more generally been neglected by the embodied embedded approach in the philosophy of cognitive science
