the introduction of the microprocessor in computer and system engineering has motivated the development of many new concepts and has simplified the design of many modern industrial systems during the first decade of their life microprocessors have shown a tremendous evolution in all possible directions technology power functionality i o handling etc of course putting the microprocessors and their environmental devices into properly operating systems is a complex and difficult task requiring high skills for melding and integrating hardware and systemic components software this book was motivated by the editors feeling that a cohesive reference is needed providing a good coverage of modern industrial applications of microprocessor based real time control together with latest advanced methodological issues unavoidably a single volume cannot be exhaustive but the present book contains a sufficient number of important real time applications the book is divided in two sections section i deals with general hardware software and systemic topics and involves six chapters chapter 1 by gupta and toong presents an overview of the development of microprocessors during their first twelve years of existence chapter 2 by dasgupta deals with a number of system software concepts for real time microprocessor based systems task scheduling memory management input output aspects programming language requirements

microcomputer design and applications provides information pertinent to the fundamental aspects of microcomputer design and applications this book presents a design approach for multiple processor computers organized into two parts encompassing 16 chapters this book begins with an overview of a number system and supporting computational algorithms which is especially useful for microcomputer control and digital signal processing this text then presents an integrated technical and management based method for developing microprocessor software

other chapters consider file structures for a small scale database system designed for microprocessor implementation and present the formulation of file structures for a typical microprocessor flopping disk system this book discusses as well the proposed solution to specify a high level machine oriented structured programming language suitable for general microprocessors and to implement a portable compiler for this language the final chapter deals with a distributed processing system for non invasive cardiac surveillance this book is a valuable resource for engineers and computer scientists
