## **A Panorama Volume 2 7th Edition with Student Resource Companion Plus Jubilee 2005-12-01**

the immune system is central to human health and the focus of much medical research growing understanding of the immune system and especially the creation of immune memory long lasting protection which can be harnessed in the design of vaccines have been major breakthroughs in medicine in this very short introduction paul klenerman describes the immune system and how it works in health and disease in particular he focuses on the human immune system considering how it evolved the basic rules that govern its behaviour and the major health threats where it is important the immune system comprises a series of organs cells and chemical messengers which work together as a team to provide defence against infection klenerman discusses these components the critical signals that trigger them and how they exert their protective effects including so called innate immune responses which react very fast to infection and adaptive immune responses which have huge

diversity and a capacity to recognise and defend against a massive array of micro organisms klenerman also considers what happens when our immune systems fail to be activated effectively leading to serious infections problems with inherited diseases and also hiv aids at the opposite extreme as klenerman shows an over exaggerated immune response leads to inflammatory diseases such as multiple sclerosis and rheumatoid arthritis as well as allergy and asthma finally he looks at the immune system v2 o how immune therapies and vaccines can be advanced to protect us against the major diseases of the 21st century about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable
