the next quantum leap beyond moneyball this book offers powerful new insights into all human decision making because if sports teams are getting it wrong this badly how do you know you re not sometimes the decisions that teams make are simply inexplicable consider sports teams have an immense amount of detailed quantifiable information to draw upon more than in virtually any other industry they have powerful incentives for making good decisions everyone sees the results of their choices and the consequences for failure are severe and yet they keep making the same mistakes over and over again systematic mistakes you d think they d learn how to avoid now two leading sports economists reveal those mistakes in basketball baseball football and hockey and explain why sports decision makers never seem to learn their lessons you ll learn which statistics are connected to wins and which aren t and which statistics can and can t predict the future along the way david berri and martin schmidt show why a quarterback s place in the draft tells you nothing about how he ll perform in the nfl why basketball decision makers don t focus on the factors that really correlate with nba success why famous coaches don t deliver better results and much more
