an entertaining mathematical exploration of the heat equation and its role in the triumphant development of the trans atlantic telegraph cable heat like gravity shapes nearly every aspect of our world and universe from how milk dissolves in coffee to how molten planets cool the heat equation a cornerstone of modern physics demystifies such processes painting a mathematical picture of the way heat diffuses through matter presenting the mathematics and history behind the heat equation hot molecules cold electrons tells the remarkable story of how this foundational idea brought about one of the greatest technological advancements of the modern era paul nahin vividly recounts the heat equation s tremendous influence on society showing how french mathematical physicist joseph fourier discovered derived and solved the equation in the early nineteenth century nahin then follows scottish physicist william thomson whose further analysis of fourier s explorations led to the pioneering trans atlantic telegraph cable this feat of engineering reduced the time it took to send a message across the ocean from weeks to minutes readers also learn that thomson used fourier s solutions to calculate the age of the earth and in a bit of colorful lore that writer charles dickens relied on the trans atlantic cable to save himself from a career damaging scandal the book s mathematical and scientific explorations can be easily understood by anyone with a basic knowledge of high school calculus and physics and matlab code is included to aid readers who would like to solve the heat equation themselves a testament to the intricate links between mathematics and physics hot molecules cold electrons offers a fascinating glimpse into the relationship between a formative equation and one of the most important developments in the history of human communication

us foreign policy during the cold war has been analysed from a number of perspectives generating large bodies of literature attempting to explain its origins its development and its conclusion however there are still many questions left only partially explained in large part this is because these accounts restrict themselves to a single level of analysis either the international system or the structure of the state and society the first level of analysis focusing on the role of individuals has largely been excluded this book argues that structural theories and any approach that limits itself to one level of analysis are inadequate to explain the development of us foreign policy instead it is necessary to incorporate the first level of analysis in order to bring human agency back and provide a more detailed explanation of us foreign policy bilsland proposes an analytical framework which incorporates presidential agency into a multi level analysis of us foreign policy during the cold war constructing a multi level case study comparison of the foreign policies of presidents truman and reagan he argues that the worldview of the president is central to agenda setting in us foreign policy making and that the management style of the president influences both decision making and the implementation of us foreign policy evidence to support this is drawn from detailed empirical analysis of truman s foreign policy of containment in korea and reagan s foreign policy of rollback in nicaragua this work will be of interest to students and scholars of us foreign policy us history and international relations

rethinking theory and history in the cold war focuses on what we mean by politics and international relations and how such assumptions have come to determine our understanding of the cold war using an historical materialist method the author criticizes conventional conceptions of international politics that tend to focus on the agency of

and relations among states and offers an alternative historical sociology of the cold war through an analysis of the relationship between formal political authority and socio economic production seen from this perspective the state the modern conceptions of politics can be seen as products of a capitalist modernity in which politics is based on the separation of the spheres of politics in the state and economics in civil society book jacket

the topic of this book is cold spray technology cold spray is a process of applying coatings by exposing a metallic or dielectric substrate to a high velocity 300 to 1200 m s jet of small 1 to 50 μm particles accelerated by a supersonic jet of compressed gas this process is based on the selection of the combination of particle temperature velocity and size that allows spraying at the lowest temperature possible in the cold spray process powder particles are accelerated by the supersonic gas jet at a temperature that is always lower than the melting point of the material resulting in coating formation from particles in the solid state as a consequence the deleterious effects of high temperature oxidation evaporation melting crystallization residual stresses gas release and other common problems for traditional thermal spray methods are minimized or eliminated this book is the first of its kind on the cold spray process cold spray technology covers a wide spectrum of various aspects of the cold spray technology including gas dynamics physics of interaction of high speed solid particles with a substrate as well as equipment technologies and applications cold spray technology includes the results of more than 20 years of original studies 1984 2005 conducted at the institute of theoretical and applied mechanics of the siberian division of the russian academy of science as well as the results of studies conducted at most of the research centres around the world the authors goal is threefold the first goal is to explain basic principles and advantages of the cold spray process the second goal is to give practical information on technologies and equipment the third goal is to present the current state of research and development in this field over the world the book provides coverage and data that will be of interest for users of cold spray technology as well as for other coating experts at the present time the cold spray method is recognized by world leading scientists and specialists a wide spectrum of research is being conducted at many research centres and companies in many countries new approach to spray coatings results are exceptionally pure coatings low spray temperature without degradation of powder and substrate materials high productivity high deposition efficiency high operational safety because of absence of high temperature gas jets radiation and explosive gases excellent thermal and electrical conductivity wide spectrum of applications because of important advantages of the process

remembering the cold war examines how more than two decades since the collapse of the soviet union cold war legacies continue to play crucial roles in defining national identities and shaping international relations around the globe given the cold war s blurred definition it has neither a widely accepted commencement date nor unanimous conclusion what is to be remembered this book illustrates that there is in fact a huge body of remembrance and

that it is more pertinent to ask what should be included and what can be overlooked over five sections this richly illustrated volume considers case studies of cold war remembering from different parts of the world and engages with growing theorisation in the field of memory studies specifically in relation to war david lowe and tony joel afford careful consideration to agencies that identify with being victims of the cold war in addition the concept of arenas of articulation which envelops the myriad spaces in which the remembering commemorating memorialising and even revising of cold war history takes place is given prominence

the book aims to present current knowledge concerning the propagation of electro magnetic waves in a homogeneous magnetoplasma for which temperature effects are unimportant it places roughly equal emphasis

on the radio and the hydromagnetic parts of the electromagnetic spectrum the dispersion properties of a magnetoplasma are treated as a function both of wave frequency assumed real and of ionization density however there is little discussion of propagation in a stratified medium for of collisions is included only which reference may be made to Budden 1 the effect in so far as this can be done with simplicity the book describes how pulses are radiated from both small and large antennas embedded in a homogeneous magneto plasma the power density radiated from a type of dipole antenna is studied as a function of direction of radiation in all bands of wave frequency input reactance is not treated but the dependence of radiation resistance on wave frequency is described for the entire electromagnetic spectrum also described is the relation between beaming and guidance for alfvén waves

the cold war was a conflict between the united states and the soviet union that partly manifested itself as a race to conquer space the soviet union launched the first satellite into orbit in 1957 while twelve years later the united states put the first humans on the moon some of the many technological feats required for space travel trickled down into everyday life such as satellite television bar codes and joysticks this resource highlights innovations that arose from the cold war demonstrating how this long conflict helped shape today s world in some positive ways
