the pharmaceutical industry relies on numerous well designed experiments involving high throughput techniques and in silico approaches to analyze potential drug targets these in silico methods are often predictive yielding faster and less expensive analyses than traditional in vivo or in vitro procedures in silico technologies in drug target identification and validation addresses the challenge of testing a growing number of new potential targets and reviews currently available in silico approaches for identifying and validating these targets the book emphasizes computational tools public and commercial databases mathematical methods and software for interpreting complex experimental data the book describes how these tools are used to visualize a target structure identify binding sites and predict behavior world renowned researchers cover many topics not typically found in most informatics books

including functional annotation sirna design pathways text mining ontologies systems biology database management data pipelining and pharmacogenomics covering issues that range from prescreening target selection to genetic modeling and valuable data integration in silico technologies in drug target identification and validation is a self contained and practical guide to the various computational tools that can accelerate the identification and validation stages of drug target discovery and determine the biological functionality of potential targets more effectively daniel e levy editor of the drug discovery series is the founder of del biopharma a consulting service for drug discovery programs he also maintains a blog that explores organic chemistry

since the mid nineteenth century there has been a notable acceleration in the development of the techniques used to confirm identity from fingerprints to photographs to dna we have been rapidly amassing novel means of identification even as personal individual identity remains a complex chimera the art of identification examines how such processes are entangled within a wider sphere of cultural identity formation against the backdrop of an unstable modernity and the rapid rise and expansion of identificatory techniques this volume makes the case that identity and identification are mutually imbricated and that our best understanding of both concepts and technologies comes

through the interdisciplinary analysis of science bureaucratic infrastructures and cultural artifacts with contributions from literary critics cultural historians scholars of film and new media a forensic anthropologist and a human bioarcheologist this book reflects upon the relationship between the bureaucratic scientific and technologically determined techniques of identification and the cultural contexts of art literature and screen media in doing so it opens the interpretive possibilities surrounding identification and pushes us to think about it as existing within a range of cultural influences that complicate the precise formulation meaning and reception of the concept in addition to the editors the contributors to this volume include dorothy butchard patricia e chu jonathan finn rebecca gowland liv hausken matt houlbrook rob lederer andrew mangham victoria stewart and tim thompson

impurity profiling is the common name of a group of analytical activities the aim of which is the detection identification structure elucidation and quantitative determination of organic and inorganic impurities as well as residual solvents in bulk drugs and pharmaceutical formulations since this is the best way to characterise the quality and stability of bulk drugs and pharmaceutical formulations this is the core activity in modern drug analysis due to the very rapid development of the analytical methodologies available for this purpose and the similarly rapid increase of the demands as regards the purity of drugs it is an important task to give a summary of the problems

and the various possibilities offered by modern analytical chemistry for their solution that is the aim of this book the book is methodology oriented in the first chapter some important aspects of the background of impurity related analytical studies toxicological pharmacopoeial aspects the characterisation of the sources of impurities and the role of impurity profiling in various fields of drug research production and therapeutic use are summarised chapter two deals with related organic impurities the strategies for impurity profiling the use of chromatographic and related separation methods spectroscopic and hyphenated techniques the subject of the third chapter is the identification and determination of residual solvents the determination of inorganic impurities is discussed in chapter four the special problems of degradation products as impurities are dealt with in chapter five a separate chapter has been compiled to deal with one of the most up to date problems in contemporary pharmaceutical analysis the estimation of enantiomeric purity of chiral drugs chapter seven is devoted to various approaches to solve the problem of polymorphic modifications as impurities since in the broader sense of the word the microbiological purity of drugs and drug products also belongs to this circle the most important information from this field is summarised in chapter eight after the mainly methodology oriented chapters the final one concentrates on four groups of drugs peptides biotechnological products antibiotics and steroids in order to demonstrate the use of the methods described earlier

method has been evidence supported throughout with summary reviews of each aspect of the roosting ecology of the individual 14 tree roosting species with illustrative photographs and data to which the reader has open access it is the first time a repeatable analysis framework has been defined against which the surveyor may compare their results at every stage from the desk study through ground truthing survey and analysis thereby ensuring nothing is overlooked and that every result can be objectively compared the survey and analysis framework itself is ground breaking in that it may readily be adapted for any taxa from moths through amphibians reptiles birds and all other mammals used diligently these methods will reward disproportionately and imbue the reader with renewed confidence as they quickly progress from beginner to competency thus this book is for everyone who has ever wanted to find a tree roost or to safeguard against inadvertently damaging one

any archivists who have held a piece of film in their hands wondering how to go about identifying it recognize the true value of film preservationist Harold Brown's work in 1967. Brown delivered a pioneering lecture on the identification of early films at the annual congress of the International Federation of Film Archives (IFIA) in East Berlin. Years of working with Britain's National Film Archive collections and the close examination of thousands of nitrate prints of the silent period made Brown a leading authority on early film identification and an unsurpassed model of methodological consciousness in the archival field. In 1990, IFIA published Brown's *Physical Characteristics of Early Films as Aids to Identification*, an updated version and a continuation of his 1967 lecture. This publication has long been archivists' trusted companion, constituting a concentrated encyclopedia on all the information that can be discovered or verified through aspects of the film other than the actual projected image, such as perforation shapes, embossed and punched marks, stock manufacturers' and producers' edge marks, frame characteristics, title styles, and production serial numbers. It also included essays on key individual production companies of the silent era. Over the last 30 years, this manual, a basic typewritten 100-page volume including 20 pages of black and white illustrations with its easily recognizable red cover, has been an invaluable reference for film archivists and scholars. However, as Brown himself acknowledged in the 1990 edition, the manual was far from definitive. Camille Blot Wellens, the editor of this new expanded edition of Brown's 1990 book, belongs to the new generation of researchers who have used

physical characteristics extensively in their work and have gathered considerable new information on the subject this new edition is the result of a project she initiated in 2014 with fiaf s support brown s original text is now augmented with new original research on key fi lm manufacturers and producers by camille bolt wellens and other leading archivists and researchers in the field richly illustrated the book contains over 900 images including 125 in full color this new 336 page edition of harold brown s seminal manual will be welcomed by many and will no doubt become a must have working tool for many in the fi lm archiving and academic fields

drawn from laboratory studies using face photographs from mock crime incidents and from actual criminal cases for reliability varies markedly in each of these three situations both an individual and a social perspective is taken of the eye witnesses and research into perception and memory together with individual differences in such things as cognitive style personality suggestibility age sex and ability to form both eidetic and memory images are examined the social aspects of stereotypes the presence of other witnesses and the desire to be a good witness are all discussed at length finally an extended examination of the possibility of voice parades and changes in identification procedures together with man machine interaction techniques is undertaken

minor but others were substantial and important see the author's introduction until recently gulls were widely regarded as a difficult group and identification and ageing was often inaccurate or uncertain this was largely due to the complexities of immature plumages which of necessity were generally unrepresented in standard field guides birdwatchers need no longer be deterred or confounded by that deficiency the book offers them the opportunity to advance their skill in field identification by accepting the challenge rather than shrinking from the difficulties

explores the roots of modern understandings of bodily identity in the mid nineteenth century united states as it became increasingly difficult to distinguish between bodies understood as black white or indian able bodied or disabled and male or female intense efforts emerged to define these identities as biologically distinct and scientifically verifiable in a literally marked body combining literary analysis legal history and visual culture ellen samuels traces the evolution of the fantasy of identification the powerful belief that embodied social identities are fixed verifiable and visible through modern science from birthmarks and fingerprints to blood quantum and dna she examines how this fantasy has

circulated between cultural representations law science and policy to become one of the most powerfully institutionalized ideologies of modern society yet as samuels demonstrates in every case the fantasy distorts its claimed scientific basis substituting subjective language for claimed objective fact from its early emergence in discourses about disability fakery and fugitive slaves in the nineteenth century to its most recent manifestation in the question of sex testing at the 2012 olympic games fantasies of identification explores the roots of modern understandings of bodily identity

congress in the real id act is a poor way to secure the country or its citizens a national id represents a transfer of power from individuals to institutions and that transfer threatens liberty enables identity fraud and subjects people to unwanted surveillance instead of a uniform government controlled identification system harper calls for a competitive responsive identification and credentialing industry that meets the mix of consumer demands for privacy security anonymity and accountability identification should be a risk reducing strategy in a social system harper concludes not a rivet to pin humans to governmental or economic machinery
