prosody has been characterised as a half tamed savage being shaped by both discrete categorical aspects as well as gradient continuous phenomena this book is concerned with the relation of the wild and the tamed sides of prosodic prominence it reviews problems that arise from a strict separation of categorical and continuous representations in models of phonetics and phonology and it explores the potential role of descriptions aimed at reconciling the two domains in doing so the book offers an introduction to dynamical systems a framework that has been studied extensively in the last decades to model speech production and perception the reported acoustic and articulatory data presented in this book show that categorical and continuous modulations used to enhance prosodic prominence are deeply intertwined and even exhibit a kind of symbiosis a multi dimensional dynamical model of prosodic prominence is sketched based on the empirical data combining tonal and articulatory aspects of prosodic focus marking the model demonstrates how categorical and continuous aspects can be integrated in a joint theoretical treatment that overcomes a strict separation of phonetics and phonology

research in linguistics as in most other scientific domains is usually approached in a modular way narrowing the domain of inquiry in order to allow for increased depth of study this is necessary and productive for a topic as wide ranging and complex as human language however precisely because language is a complex system tied to perception learning memory and social organization the assumption of modularity can also be an obstacle to understanding language at a deeper level this book examines the consequences of enforcing non modularity along two dimensions the temporal and the cognitive along the temporal dimension synchronic and diachronic domains are linked by the requirement that sound changes must lead to viable stable language states along the cognitive dimension sound change and variation are linked to speech perception and production by requiring non trivial transformations between acoustic and articulatory representations the methodological focus of this work is on computational modeling by formalising and implementing theoretical accounts modeling can expose theoretical gaps and covert assumptions to do so it is necessary to formally assess the functional equivalence of specific implementational choices as well as their mapping to theoretical structures this book applies this analytic approach to a series of implemented models of sound change as theoretical inconsistencies are discovered possible solutions are proposed incrementally constructing a set of sufficient properties for a working model because internal theoretical consistency is enforced this model corresponds to an explanatorily adequate theory and because explicit links between modules are required this is a theory not only of sound change but of many aspects of phonological competence the book highlights two aspects of modeling work that receive relatively little attention the formal mapping from model to theory and the scalability of demonstration models focusing on these aspects of modeling makes it clear that any theory of sound change in the specific is impossible without a more general theory of language of the relationship between perception and production the relationship between phonetics and phonology the learning of linguistic units and the nature of underlying representations theories of sound change that do not explicitly address these aspects of language are making tacit untested assumptions about their properties addressing so many aspects of language may seem to complicate the linguist s task however as this book shows it actually helps impose boundary conditions of ecological validity that reduce the theoretical search space

written texts of the iliad and the odyssey achieved an unprecedented degree of standardization after 150 bce but what about homeric texts prior to the emergence of standardized written texts orality textuality and the homeric epics sheds light on that earlier history by drawing on scholarship from outside the discipline of classical studies to query from three different angles what it means to speak of homeric poetry together with the word text part i utilizes work in linguistic anthropology on oral texts and oral intertextuality to illuminate both the verbal and oratorical landscapes our homeric poets fashion in their epics and what the poets were striving to do

when they performed looking to folkloristics part ii examines modern instances of the textualization of an oral traditional work in order to reconstruct the creation of written versions of the homeric poems through a process that began with a poet dictating to a scribe combining research into scribal activity in other cultures especially in the fields of religious studies and medieval studies with research into performance in the field of linguistic anthropology part iii investigates some of the earliest extant texts of the homeric epics the so called wild papyri by looking at oral texts dictated texts and wild texts this volume traces the intricate history of homeric texts from the archaic to the hellenistic period long before the emergence of standardized written texts in a comparative and interdisciplinary study that will benefit researchers in a number of disciplines across the humanities

argumentative writing in a second language is a collection on teaching argumentative writing offering multiple vantage points drawn from the contributors own teaching and research experiences the value of learning how to compose argumentative texts cannot be overstated and yet very little attention has been allocated to the equally important topic of how argumentation is or can be taught in the l2 context thus this volume shifts attention to teachers and argumentative writing instruction especially within increasingly common multimodal and digital literacy settings while doing so it provides a comprehensive wide ranging view of the l2 argumentative writing landscape within an instructional lens part i of the volume is topic oriented and focuses on explorations of important issues and perspectives while part ii features several chapters reporting classroom based studies of a variety of instructional approaches that expand our understanding of how argumentative writing can be taught the book will be of value to pre service and in service teachers in varying instructional contexts as well as teacher educators and l2 writing scholars researchers
