from musket to metallic cartridge is an historical introduction to the use of black powder firearms from the primitive smooth bore musket to breech loading cartridge guns as well as a primer on their practical use for today's black powder shooters drawing on his experience of countless hours on the shooting range backed up by meticulous research. Oyvind Flatnes relates over 500 years of development and covers the huge range of different ignition systems, models and patents. He describes the use of antique firearms and replicas, discussing their historical and safe modern use. The book is profusely illustrated throughout with both photographs and diagrams showing a range of guns and their ammunition, with some live firing shots showing them in action. Aimed at shooters, collectors and general gun and weapons enthusiasts, this book will inspire the reader to learn more about how firearms work and to take them onto the range too. Superbly illustrated with 265 colour photographs and diagrams.

Rebellion!

2015

In the early 14th century a new weapon entered the arsenals of European armies: this first generation of black powder weapons put fear into the heart of the enemy and in 1453 Ottoman cannon succeeded in pummeling the once impregnable walls of Constantinople. But cannons which are both slow and cumbersome were difficult to use and often proved inaccurate. The first handgonnes were the answer, easily dismissed by later historians as nothing more than crude tubes that shot wildly inaccurate lead balls. More recent research has revealed the true accuracy of the medieval handgonne together with its penetrative power. This volume, complete with detailed illustrations and colour photographs of reconstructed handgonnes, reveals the true history of what could easily have been the most revolutionary weapon in history. This book will be a must for medieval enthusiasts and re-enactors.

Mining in the western United States entered its great era after 1860 through use of the double jack black powder hand steel, Bickford fuse, wire rope and the steam engine. Those were the years of bonanza strikes: Henry Wickenburg's Vulture Mine in Arizona Territory, the main hard rock gold strike in the desert southwest; Ed Schieffelin's discovery of vast silver deposits in Tombstone, Arizona; and the Tonopah Goldfield strike in Nevada, which netted over one hundred million dollars. Black Powder and Hand Steel describes the miners and the machinery they used. Otis E. Young Jr. gives an account of the miners, particularly the Cornish and Irish, their origins, character, social life, pleasures and most important, their labors. The miner's lot depended on the tools he used and the author traces the evolution of the miner's most important tools from hoisting bucket to mine elevator, cold mining to dynamite, ore car to skip, hemp to wire rope and slow match to Bickford fuse. Young reveals the difficulties of prospecting and mining two of the West's most valuable ores, gold and silver, and gives readers a firsthand look at the challenges of working even the most successful strikes. A companion volume to Young's Western Mining, Black Powder and Hand Steel is written in the same lively style, informative and entertaining for general readers and scholars. It is also well illustrated with drawings by Buck O'Donnell.
