this book speaks about physics discoveries that intertwine mathematical reasoning modeling and scientific inquiry it offers ways of bringing together the structural domain of mathematics and the content of physics in one coherent inquiry teaching and learning physics is challenging because students lack the skills to merge these learning paradigms the purpose of this book is not only to improve access to the understanding of natural phenomena but also to inspire new ways of delivering and understanding the complex concepts of physics to sustain physics education in college classrooms authentic training that would help develop high school students skills of transcending function modeling techniques to reason scientifically is needed and this book aspires to offer such training the book draws on current research in developing students mathematical reasoning it identifies areas for advancements and proposes a conceptual framework that is tested in several case studies designed using that framework modeling newton s laws using limited case analysis modeling projectile motion using parametric equations and enabling covariational reasoning in einstein formula for the photoelectric effect represent some of these case studies a wealth of conclusions that accompany these case studies drawn from the realities of classroom teaching is to help physics teachers and researchers adopt these ideas in practice

probability theory and its applications represent a discipline of fundamental importance to nearly all people working in the high technology world that surrounds us there is increasing awareness that we should ask not is it so but rather what is the probability that it is so as a result most colleges and universities require a course in mathematical probability to be given as part of the undergraduate training of all scientists engineers and mathematicians this book is a text for a first course in the mathematical theory of

probability for undergraduate students who have the prerequisite of at least two and better three semesters of calculus in particular the student must have a good working knowledge of power series expansions and integration moreover it would be helpful if the student has had some previous exposure to elementary probability theory either in an elementary statistics course or a finite mathematics course in high school or college if these prerequisites are met then a good part of the material in this book can be covered in a semester is week course that meets three hours a week

research powers innovation and technoscientific advance but it is due for a rethink one consistent with its deeply holistic nature requiring deeply human nurturing research is a deeply human endeavor that must be nurtured to achieve its full potential as with tending a garden care must be taken to organize plant feed and weed and the manner in which this nurturing is done must be consistent with the nature of what is being nurtured in the genesis of technoscientific revolutions venkatesh narayananamurti and jeffrey tsao propose a new and holistic system a rethinking of the nature and nurturing of research they share lessons from their vast research experience in the physical sciences and engineering as well as from perspectives drawn from the history and philosophy of science and technology research policy and management and the evolutionary biological complexity physical and economic sciences narayananamurti and tsao argue that research is a recursive reciprocal process at many levels between science and technology between questions and answer finding and between the consolidation and challenging of conventional wisdom these fundamental aspects of the nature of research should be reflected in how it is nurtured to that end narayananamurti and tsao propose aligning organization funding and governance with research embracing a culture of holistic technoscientific exploration and instructing people with care and accountability
