in righting health policy d robert macdougall argues that bioethics needs but does not have adequate tools for justifying law and policy bioethics tools are mostly theories about what we owe each other but justifying laws and policies requires more at a minimum it requires tools for explaining the

2023-04-29

9/14

legitimacy of actions intended to control or influence others it consequently requires political rather than moral philosophy after showing how bioethicists have consistently failed to use tools suitable for achieving their political aims macdougall develops an interpretation of kant s political philosophy on this account the legitimacy of health laws does not derive from the morality of the behaviors they require but derives instead from their role in securing our equal freedom from each other macdougall uses this kantian account to show the importance of political philosophy for bioethics first he shows how evaluating kidney markets in terms of the legitimacy of prohibiting sales rather than the morality of selling kidneys reverses the widely accepted view that kantian philosophy supports legally prohibiting markets second macdougall argues that an account of political authority is necessary for settling longstanding bioethics debates about the legal and even moral standards that should govern informed consent

The Oxford Handbook of U.S. Health Law

2017

the corona pandemic kills people endangers families friends communities companies institutions societies economies and global networks it brings about triage unemployment social distancing and home schooling countries respond differently often set aside civil and basic human rights families and friends cannot get together visiting the sick nor attending funerals this pestilence is clearly a cultural economic and political disease 40 leaders in medical and sociological research in politics religion and consulting from 24 countries offer diverse sometimes controversial answers collected by martin woesler and hans martin sass

Righting Health Policy

2022-02-23

the first anthology devoted to the theory and practice of all forms of public philosophy a companion to public philosophy brings together in a single volume the diverse practices modalities and perspectives of this rapidly growing field forty two chapters written by established practitioners and newer voices alike consider questions ranging from the definition of public philosophy to the value of public philosophy to both society and philosophy itself throughout the book philosophers offer insights into the different publics they have engaged the topics they have explored the methods they have used and the lessons they have learned from these engagements the companion explores important philosophical issues concerning the practice of philosophy in the public sphere how public philosophy relates to advocacy philosophical collaborations with political activists locations where public philosophy can be done and more many essays highlight underserved topics such as effective altruism fat activism trans activism indigenous traditions and africana philosophy while other essays set the stage for rigorous debates about the boundaries of public philosophy and its value as a legitimate way to do philosophy discusses the range of approaches that professional philosophers can use to engage with non academic audiences explores the history and impact of public philosophy from the time of socrates to the modernera highlights the work of public philosophers concerning issues of equity social justice environmentalism and medical ethics covers the modalities used by contemporary public philosophers including film and television podcasting internet memes and community engaged teaching includes essays by those who bring philosophy to corporations government policy consulting american prisons and activist groups across the political spectrum a companion to public philosophy is essential reading for philosophers from all walks of life who are invested in and curious about the ways that philosophy can impact the public and how the public can impact philosophy it is also an excellent text for undergraduate and graduate courses on the theory and practice of public philosophy as well as broader courses on philosophy normative ethics and comparative and world philosophy

this book covers the results of a study concerning systems for healthcare oriented monitoring of elderly persons it is focused on the methods for processing data from impulse radar sensors and depth sensors aimed at localisation of monitored persons and estimation of selected quantities informative from the healthcare point of view it includes mathematical descriptions of the considered methods as well as the corresponding algorithms and the results of their testing in a real world context moreover it explains the motivations for developing healthcare oriented monitoring systems and specifies the real world needs which may be addressed by such systems the healthcare systems all over the world are confronted with challenges implied by the ageing of population and the lack of adequate recruitment of healthcare professionals those challenges can be met by developing new technologies aimed at improving the quality of life of elderly people and at increasing the efficiency of public health management monitoring systems may contribute to this strategy by providing information on the evolving health status of independently living elderly persons enabling healthcare personnel to quickly react to dangerous events although these facts are generally acknowledged such systems are not yet being commonly used in healthcare facilities and households this may be explained by the difficulties related to the development of technological solutions which can be both acceptable for monitored persons and capable of providing healthcare personnel with useful information the impulse radar sensors and depth sensors considered in this book have a potential for overcoming those difficulties since they are not cumbersome for the monitored persons if compared to wearable sensors and do not violate the monitored person s privacy if compared to video cameras since for safety reasons the level of power emitted by the radar sensors must be ultra low the task of detection and processing of signals is a research challenge which requires more sophisticated methods than those developed for other radar applications this book contains descriptions of new bayesian methods applicable for the localisation of persons by means of impulse radar sensors and an exhaustive review of previously published ones furthermore the methods for denoising regularised numerical differentiation and fusion of data from impulse radar sensors and depth sensors are systematically reviewed in this book on top of that the results of experiments aimed at comparing the performance of various data processing methods which may serve as guidelines for related future projects are presented
