countries experimental design is important enough to merit a book on its own without statistics  
that instead links methodology to a discussion of how psychologists can advance and reject  
theories about human behaviour the objective of this book is to fulfil this role the first four  
chapters lay the foundations of design in experimental psychology the first chapter justifies the  
prominent role given to methodology within the discipline whilst chapters two and three  
describe between subject and within subject designs chapter four compares and contrasts the  
traditional experimental approach with that of the quasi experimental or correlational approach  
concluding that the consequences of not recognizing the value of the latter approach can be  
far reaching the following three chapters discuss practical issues involved in running  
experiments the first of these offers a comprehensive guide to the student researcher who
