semiempirical approach was attempted to predict the slope climbing
capability of wheels the approach consisted of determining the pull
performance of flexible wheels on yielding slopes by two extrapolations
one starting from the theoretically known pull performance of flexible
wheels on unyielding slopes and the other from experimentally determined
performance of rigid wheels on yielding level ground the result is a
prediction equation for the available pull of elastic rim wheels as a
particularly simple case of pneumatic tires on deformable inclined soils
in terms of soil deformability cohesion and internal friction wheel
flexibility and load and slope angle author
