Design Computing and Cognition '06 2000

this is the second volume of the new conference series design computing and cognition dcc successor to the successful series artificial intelligence in design aid the conference theme of design computing and cognition recognizes not only the essential relationship between human cognitive processes as models of computation but also how models of computation inspire conceptual realizations of human cognition

REAL KITCHEN & RENOVATION ~

PRO 14: International RILEM/CIB/ISO Symposium on Integrated Life Cycle Design of Materials and Structures (ILCDES 2000) 2003-02

in this international collection of papers there is a wealth of knowledge on artificial intelligence ai and cognitive science cs techniques applied to the problem of providing help systems mainly for the unix operating system the research described here involves the representation of technical computer concepts but also the representation of how users conceptualise such concepts the collection looks at computational models and systems such as uc yucca and oscon programmed in languages such as lisp prolog ops 5 and c which have been developed to provide unix help these systems range from being menu based to ones with natural language interfaces some providing active help intervening when they believe the user to have misconceptions and some based on empirical studies of what users actually do while using unix further papers investigate planning and knowledge representation where the focus is on discovering what the user wants to do and figuring out a way to do it as well as representing the knowledge needed to do so there is a significant focus on natural language dialogue where consultation systems can become active incorporating user modelling natural language generation and plan recognition modelling metaphors and users mistaken beliefs much can be learned from seeing how ai and cs techniques can be investigated in depth while being applied to a real test bed domain such as help on unix

Intelligent Help Systems for UNIX 2012-04-24

this is the second part of a major theoretical work by patrik schumacher which outlines how the discipline of architecture should be understood as its own distinct system of communication autopoeisis comes from the greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems this new approach offers architecture an arsenal of general comparative concepts it allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse on the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations whereas the first volume provides the theoretical groundwork for schumacher s ideas focusing on architecture as an autopoeitic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces it formulates these tasks looking specifically at how architecture is seeking to organize and articulate the complexity of post fordist network society the volume explicitly addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty architecture s specific role within contemporary society is explained and its relationship to politics is clarified finally the new global style of parametricism is introduced and theoretically grounded

The Autopoiesis of Architecture, Volume II 2012-11

internationally refereed papers present the state of the art in computer aided architectural design research these papers reflect the theme of the 12th international conference of caadfutures integrating technologies for computer aided design collectively they provide the technological foundation for new ways of thinking about using computers to design in addition they address the education of designers themselves

can get and ones that can satisfy those needs ibm can help a primary component that can affect performance is access to disk based data and as data volumes grow so does the performance impact to improve performance it is time to look for technology enhancements that can mitigate that impact ibm solidDB is powerful relational in memory caching software that can accelerate traditional disk based relational database servers by caching performance critical data into one or more solidDB in memory database instances this capability can enable significant performance improvements it brings data closer to the application so you can use a faster and more efficient data access paradigm the result faster delivery of information for your queries to enable faster analysis and decision making that can give you a significant business advantage have questions many of the answers you need are contained in this ibm redbooks publication
