The Science of Voice Production and Voice Preservation 1884 the greatest tenor of his day enrico caruso possessed remarkable breath control and enunciation along with an intense quality of vocal pathos this guide explains clearly and scientifically how singers can emulate his phenomenal vocal production written by a noted laryngologist who devoted most of his career to caruso it includes detailed diagrams instructions and exercises

The Efficiency of Voice Production 1991-12-01 from the preface the object of this work is to furnish persons who make an artistic or professional use of the vocal organs with a concise account of those relations of the voice to physical and medical science which are only cursorily alluded to or passed over altogether in treatises on elocution and singing it is an abridgment of my treatise on vocal physiology and hygiene for the use of those who do not require to study the subject in all its technical and theoretical bearings the second edition has been carefully revised i have now been able to satisfy myself experimentally that the physiological action of the larynx is identical in both sexes and that the vocal registers have the same the details of my observations which i believe will finally settle this important and vexed question will shortly be published in one of the medical or scientific journals

The Art of voice-production 1882 this book presents the first field work based phonetic study focussing such extraordinary phonatory outcomes as occur in the context of south siberian throat singing in throat singing specific voice production types serve as source which are subject to various ways of formant shaping merging adjustment and reinforcement all of which function to enhance individual harmonics two main types are proposed for voice production in south siberian throat singing a voice production by means of the vocal folds featuring a constriction of the aryepiglottic sphincter and a voice production with involvement of the ventricular folds furthermore a simple schematic model for the articulation types in throat singing is suggested one of the basic questions throughout this study is whether the phenomenon of throat singing shows fairly clear regional variants in different parts of southern central siberia or whether the variation is chiefly a matter of individual styles

Caruso's Method of Voice Production 1981-01-01 excerpt from caruso s method of voice production the scientific culture of the voice this work dedicated to him in the last days of his life was conceived as the faithful interpretation of his perfect and rare singing for over a decade and a half i had the privilege of associating with the great artist not only in the capacity of medical adviser but in the intimacy of a wonderful friendship and his singing was to me a constant guide and inspiration in my investigations of the many problems of the human voice and vocal art by closely observing his method of singing i saw the correct application by the master himself of the natural laws governing the mechanism of voice production and i had the opportunity by testing his ideas and principles of ascertaining that they con formed with those i have developed in the scientific part of this book as a modest wreath of admiration and friendship i lay this work on the grave of the great artist about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Natural Method of Voice Production in Speech and Song 1915 excerpt from voice production and analysis the hang tint of

instruments is controlled in various ways according to the method of tone production for example in the piano the main factors are the length and weight of the string the hardness and shape of the hammer the sharpness of the blow and the distance of the point struck from the end of the string to these may be added the resonant qualities of the frame and sounding board but when the piano is finished its tone its dang tint is determined the performer can do very little to change the hang tint of a tone without at the same time varying its intensity about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
