a stimulating new inquiry into the fundamental truth of strategy its purpose place utility and value this new study is animated

by a startling realization the concept of strategic victory must be summarily discarded this is not to say that victory has no place in strategy or strategic planning the outcome of battles and campaigns are variables within the strategist's plan but victory is a concept that has no meaning there to the tactical and operational planner wars are indeed won and lost and the difference is plain success is measurable failure is obvious in contrast the pure strategist understands that war is but one aspect of social and political competition an ongoing interaction that has no finality strategy therefore connects the conduct of war with the intent of politics it shapes and guides military means in anticipation of a panoply of possible coming events in the process strategy changes the context within which events will happen in this new book we see clearly that the goal of strategy is not to culminate events to establish finality in the discourse between states but to continue them to influence state discourse in such a way that it will go forward on favorable terms for continue it will this book will provoke debate and stimulate new thinking across the field and strategic studies

this book is a collection of research articles that deal with three aspects of simulation and gaming for social design 1 theory and methodology including game system theory and agent based modeling 2 sustainability including global warming and the energy food nexus and 3 social entrepreneurship including business ethnic and ethical understanding the latter two especially form two major areas of clinical knowledge in contemporary life simulation and gaming with its participatory approach

provides participants with a seamless integration of problem solving and education it has been known as a tool for interdisciplinary communication since the 1960s and now it is being developed to contribute to global society in the twenty first century this is the first book on simulation and gaming for social design that covers all aspects from the methodological foundations to practical examples in the fields of sustainability and social entrepreneurship regardless of the size of the problematics societal system design involves 1 the visioning and conception aspects due to the long term overall nature of the goal 2 interdisciplinary thinking and communication for the exploration of new states of accommodation with technological systems and 3 the human dimension aspect including education that must be dealt with thus academic developments of simulation and gaming for social design as system thinking and practice methodologies are anticipated simulation and gaming has great potential for development as a tool to facilitate the transfer between theoretical and clinical knowledge

many people want to help bring about changes in their neighborhoods workplaces and communities leaders and scholars of change efforts are likewise eager for insights into what makes some organizations and coalitions capable of building and exercising power why are some groups successful in making changes in policies and systems and in sustaining their momentum over time while others struggle or never really get off the ground with community power and empowerment brian

d christens brings the most comprehensive analysis of empowerment theory yet conducted to bear on these questions taking aim at many of the longstanding weaknesses and ambiguities of empowerment theory research and practice for example one major hindrance is that most notions of empowerment have not been coherently connected with community power in addition research has emphasized psychological aspects of empowerment over organizational processes and has neglected community empowerment processes to an even greater extent by linking empowerment and community power christens constructs a holistic framework for assessing and comparing community driven change efforts this book offers new guidance for inquiries into outcomes and impacts of empowerment processes on health and well being providing a resource for researchers organizational leaders practitioners and anyone interested in collective action for change

this book is the first to be entirely devoted to the challenging art of handling membrane proteins out of their natural environment a key process in biological and pharmaceutical research but one plagued with difficulties and pitfalls written by one of the foremost experts in the field membrane proteins in aqueous solutions is accessible to any member of a membrane biology laboratory after presenting the structure functions dynamics synthesis natural environment and lipid interactions of membrane proteins the author discusses the principles of extracting them with detergents the mechanisms of detergent induced destabilization countermeasures and recent progress in developing detergents with weaker denaturing properties non conventional alternatives to detergents including bicelles nanodiscs amphipathic peptides fluorinated surfactants and amphipols are described and their relative advantages and drawbacks are compared the synthesis and solution properties of

the various types of amphipols are presented as well as the formation and properties of membrane protein amphipol complexes and the transfer of amphipol trapped proteins to detergents nanodiscs lipidic mesophases or living cells the final chapters of the book deal with applications membrane protein in vitro folding and cell free expression solution studies nmr crystallography electron microscopy mass spectrometry amphipol mediated immobilization of membrane proteins and biomedical applications important features of the book include introductory sections describing foundations as well as the state of the art for each of the biophysical techniques discussed and topical tables which organize a widely dispersed literature boxes and annexes throughout the book explain technical aspects and twelve detailed experimental protocols ranging from in vitro folding of membrane proteins to single particle electron cryomicroscopy have been contributed by and commented on by experienced users membrane proteins in aqueous solutions offers a concise accessible introduction to membrane protein biochemistry and biophysics as well as comprehensive coverage of the properties and uses of conventional and non conventional surfactants it will be useful both in basic and applied research laboratories and as a teaching aid for students instructors researchers and professionals within the field

this book explores the nature of stative verbs their eventuality structure and the patterns of argument realization the study shows that there is no single class of stative verbs rather several distinct groups of verbs are found verbs that undergo a systematic stative eventive ambiguity verbs that allow for a stative reading only and verbs that seem to have an intermediate status verbs of position and verbs of internal causation the study concludes that there is a discrete boundary between stative and eventive verbs excluding any intermediate status stativity arises because the aspectual operators do and become are absent in the lexical semantic structure eventivity arises if one of these is present a minimalist view on argument realization and event structure completes the book theta features on the arguments are checked against the aspectual heads within the verb phrase
