casl the common algebraic specification language was designed by the members of cofi the common framework initiative for algebraic specification and development and is a general purpose language for practical use in software development for specifying both requirements and design casl is already regarded as a de facto standard and various sublanguages and extensions are available for specific tasks this book illustrates and discusses how to write casl specifications the authors first describe the origins aims and scope of cofi and review the main concepts of algebraic specification languages the main part of the book explains casl specifications with chapters on loose generated and free specifications partial functions sub and supersorts structuring specifications genericity and reusability architectural specifications and version control the final chapters deal with tool support and libraries and present a realistic case study involving the standard benchmark for comparing specification frameworks the book is aimed at software researchers and professionals and follows a tutorial style with highlighted points illustrative examples and a full specification and library index a separate complementary lncs volume contains the casl reference manual

as the solutions manual this book is meant to accompany the main title introduction to linear regression analysis fifth edition clearly balancing theory with applications this book describes both the conventional and less common uses of linear regression in the practical context of today s mathematical and scientific research beginning with a general introduction to regression modeling including typical applications the book then outlines a host of technical tools that form the linear regression analytical arsenal including basic inference procedures and introductory aspects of model adequacy checking how transformations and weighted least squares can be used to resolve problems of model inadequacy how to deal with influential observations and polynomial regression models and their variations the book also includes material on regression models with autocorrelated errors bootstrapping regression estimates classification and regression trees and regression model validation

differential equations an introduction to modern methods and applications is a textbook designed for a first course in differential equations commonly taken by undergraduates majoring in engineering or science it emphasizes a systems approach to the subject and integrates the use of modern computing technology in the context of contemporary applications from engineering and science section exercises throughout the text are designed to give students hands on experience in modeling analysis and computer experimentation optional projects at the end of each chapter provide additional opportunities for students to explore the role played by differential equations in scientific and engineering problems of a more serious nature

excerpt from introduction to geometry a manual of exercises for beginners along with this purpose the practical side of the subject is also taken into account the child s knowledge being tested as he goes on by his power to apply it all that is taught him is connected with his ordinary everyday experience and the attempt is made to lead him in acquiring new knowledge to turn to use what he has already learned the writer acknowledges with thanks his indebtedness for assistance in revising the manuscript and for valuable suggestions on the work to dr george a bacon mr charles a lowry assistant superintendent of chicago public schools and mr j a foberg of the english high and manual training school about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing

page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

introduction to health and safety in construction covers the specific challenges faced by the construction industry as well as the basics of occupational safety and health in general the coverage of this book has been directly matched to the certificate course in construction safety and health from nebos however the comprehensive coverage of health and safety topics in a construction context make it relevant for other courses in construction design and management construction safety and health and the built environment both in the uk and overseas as well as for construction professionals who are looking for an introduction to health and safety which addresses the specific problems encountered in their industry in its second edition the book has been updated to incorporate changes in legislation regarding noise vibration coshh work at height fire safety construction design and management asbestos

the text is highly illustrated in full colour easy to read and includes self assessment questions taken directly from nebosh examinations a chapter on study skills offers support for professionals returning to study the text is also supported with checklists report forms and record sheets making it a valuable reference tool for construction managers supervisors designers building and civil engineers to consult on the day to day issues of health and safety
