research on student learning has undergone many changes  
in the last decade in particular the research  
methodology has advanced in many different ways on the  
level of complexity of data collection and rigor of  
data analyses in the quantitative research perspective  
many off line and online measures and statistical  
analysis techniques have been further meticulously  
developed in the qualitative research perspective a  
broader range of data collection tools are applied also  
the use of mixed method data analysis is increasing  
although in some research strands on student learning  
the mono method approach of quantitative research is  
still the golden rule in other research strands we  
notify more methodological creativity in mixing  
research paradigms and designs which can be very  
fruitful advancements for further knowledge development  
in this book we focus on the domain of research on  
learning patterns in which these methodological shifts  
are in rapid evolution a variety of international  
research cases illustrating current practices of  
empirical research is presented showing how different  
methods of research on student learning can be applied  
and be useful for future research benefits an  
boundaries of the research methods are critically  
discussed and future perspectives are proposed
