make credits in the mittelstand more expensive in view of the previous analysis on possible capital
requirements and changes in credit conditions for german small and medium sized enterprises the answer to
this question can be adequately answered on average basel ii does not make credits in the mittelstand more
expensive basel ii has an influence on the amount of regulatory capital the banks have to hold the costs of this
scarce factor are included in the risk premium which is part of the borrower s credit rent therefore the credit
rent would ceteris paribus be higher if capital requirements rose however it has been shown that for about 90 of
german companies capital requirements will even be lower in basel ii this is because these companies will
belong to the retail segment in basel ii where there is a reduction in regulatory capital compared to the current
8 up to a high probability of default between 7 and 8 which would apply to a company in default or bankruptcy
additionally capital requirements for small and medium sized enterprises can be further reduced due to the
extended recognition of collaterals basel ii has introduced types of collaterals that small and medium sized
companies are more often able to deliver namely account receivables and real estate it can therefore be
concluded that a possible future increase in average credit rent levels for german small and medium sized
enterprises must have other reasons than the banks costs for regulatory capital zusammenfassung jede

Written by academics and practitioners it integrates business strategies with formal analysis relating to M&A deal making providing a coherent statement on M&A by utilizing scholarly work with best practices by industry. The authors provide extensive analytical review and applications of the following critical M&A issues: valuation leveraged buyouts payment methods and their implications tax issues corporate governance and the regulatory environment including antitrust in M&A.
