The Patient Will See You Now

2016-10-25

the essential guide by one of america s leading doctors to how digital technology enables all of us to take charge of our health a trip to the doctor is almost a guarantee of misery you ll make an appointment months in advance you ll probably wait for several hours until you hear the doctor will see you now but only for fifteen minutes then you ll wait even longer for lab tests the results of which you ll likely never see unless they indicate further and more invasive tests most of which will probably prove unnecessary much like physicals themselves and your bill will be astronomical in the patient will see you now eric topol one of the nation s top physicians shows why medicine does not have to be that way instead you could use your smartphone to get rapid test results from one drop of blood monitor your vital signs both day and night and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor all at a small fraction of the cost imposed by our modern healthcare system the change is powered by what topol calls medicine s gutenber moment much as the printing press took learning out of the hands of a priestly class the mobile internet is doing the same for medicine giving us unprecedented control over our healthcare with smartphones in hand we are no longer beholden to an impersonal and paternalistic system in which

doctor knows best medicine has been digitized topol argues now it will be democratized computers will replace physicians for many diagnostic tasks citizen science will give rise to citizen medicine and enormous data sets will give us new means to attack conditions that have long been incurable massive open online medicine where diagnostics are done by facebook like comparisons of medical profiles will enable real time real world research on massive populations there s no doubt the path forward will be complicated the medical establishment will resist these changes and digitized medicine inevitably raises serious issues surrounding privacy nevertheless the result better cheaper and more human health care will be worth it provocative and engrossing the patient will see you now is essential reading for anyone who thinks they deserve better health care that is for all of us

most people understand that regulations have a direct bearing on their access to things such as clean air and water and safe working environments however in the united states few people make the connection between how legal services are regulated and how difficult it is for them to access legal services indeed on the question of affordable and accessible civil justice the world justice project ranks the us 94th out of 113 countries behind albania belarus myanmar and russia for decades academics and others have debated whether the legal profession is self regulated and if it is whether it should be but is it the right debate self regulation or not does not obviate the need for effective regulation independent accountable and transparent regulatory bodies effective oversight of those bodies the genuine engagement of citizens in the regulatory process evidence based research to fully assess the impact of regulation and an approach to regulation that is proportionate and targeted to actual risks are essential for effective regulation through the lens of the adoption of alternative structures this book explains how england wales and australia have by embracing these essential elements successfully modernized their regulatory environments for legal services and how canada has taken firm steps down its own path to the same in contrast by rejecting these elements the united states remains paralyzed in an unproductive regulatory environment for legal services this book provides a blueprint for how the us can take inspiration from its common law sisters to breathe new life into its regulatory environment for legal services ultimately modernization will require more and better regulation that is financed publicly through equitable progressive revenue sources
