to demystify creative work without reducing it to simplistic formulas doris wallace and howard gruber one of the world s foremost authorities on creativity have produced a unique book exploring the creative process in the arts and sciences the book s original evolving systems approach treats creativity as purposeful work and integrates cognitive emotional aesthetic and motivational aspects of the creative process twelve revealing case studies explore the work of such diverse people as william wordsworth albert einstein jean piaget anais nin and charles darwin the case study approach is discussed in relation to other methods such as biography autobiography and psychobiology emphasis is given to the uniqueness of each creative person the social nature of creative work is also treated without losing the sense of the individual a final chapter considers the relationship between creativity and morality in the nuclear age in addition to developmental psychologists and cognitive scientists this study offers fascinating insights for all readers interested in the history of ideas scientific discovery artistic innovation and the interplay of intuition inspiration and purposeful work

Anthropogenic Organic Compounds in Source Water of Nine Community Water Systems That Withdraw from Streams, 2002-05 2009-12

source water herein defined as stream water collected at a water system intake prior to water treatment was sampled at nine community water systems ranging in size from a system serving about 3 000 people to one that serves about 2 million people as many as 17 source water samples were collected at each site over about a 12 month period between 2002 and 2004 for analysis of 258 anthropogenic organic compounds most of these compounds are unregulated in drinking water and the compounds analyzed include pesticides and selected pesticide degradates gasoline hydrocarbons personal care and domestic use compounds and solvents about one half 134 of the compounds were detected at least once in source water samples

a search for the enthalpy of formation of a particular compound can be a difficult task so it is of great benefit that the values be collected together in one comprehensive compilation thermochemical data and structures of organic compounds presents approximately 3000 enthalpies of formation of organic compounds there are many instances of large discrepancies reported for a particular compound thus selection of the best value becomes a challenge for the person who is not a practicing thermochemist but who only wishes to use the data a critical evaluation of the values presented becomes desirable this compilation presents about 3000 enthalpies of formation of organic compounds all critically evaluated

in the last decades the public concern on the pesticide residues content in foods have been steadily rising the global development of food trade implies that aliments from everywhere in the world can reach the consumer s table therefore the identification of agricultural practices that employ different pesticides combinations and application rates to protect produce must be characterized as they left residues that could be noxious to human health however the possible number of pesticides and its metabolites of toxicological relevance to be found in a specific commodity is almost 1500 and the time needed to analyze them one by one makes this analytical strategy a unrealistic task to overcome this problem the concept of multi residue methods mrm for the analysis of pesticide traces have been developed the advent of new and highly sensitive instrumentation based in hyphenatedchromatographic systems to coupled mass analyzers xc ms ms or msn permitted simultaneously the identification and the determination of up to hundreds of pesticide residues in a single chromatographic run multiresidue methods for the analysis of pesticide residues in food presents the analytical proceduredes developed in the literature as well as those currently employed in the most advanced laboratories that perform routinely pesticide residue analysis in foods in addition to these points the regulations guidelines and recommendations from the most important regulatory agencies of the world on the topic will be commented and contrasted
