excerpt from the modern law of storms by the term law of storms is meant as sailors understand it a code of rules or directions for manoeuvring a vessel so as to avoid the centre or most dangerous portion of a storm and as a secondary consideration to take advantage of its favorable winds to prosecute the voyage to a landsman it is difficult to appreciate the many and varying considerations that enter as factors in this question here on land our position is fixed we take storms as they come and make the best of it it is hardly once in a lifetime that an approaching storm threatens us with danger to life or limb and all that is required of the average individual is to know enough to go in the house when it rains moreover the

great weather bureaus that are now established in the leading civilized nations although a natural and legitimate growth have a certain tendency like other great monopolies to crush out individuality especially anything that may look like opposition at sea however the case is widely different the navigator is thrown upon his own resources entirely he must decide from his own unaided observations whether a storm is approaching and if so whether it is likely to be of dangerous severity he must then first of all try to avoid the most dangerous regions of the storm field allowing a fair margin for safety to do this he has to consider the character of his vessel the amount of sea room he has for manoeuvring that is the lay of the land considered with reference to the winds and currents to be expected the bearing and distance of the storm centre and the size severity velocity and track of the storm secondly he has to decide how he can best profit by the approaching storm to continue his voyage to do this he must understand the general character of the wind system the probable track of the storm relative to his vessel's track and the character of wind and weather following thus the law of storms is a very different thing to the practical navigator from what it is to the meteorologist and in this article I shall confine my attention wholly to the practical side of the question about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
