interdisciplinary teaching about the earth and environment for a sustainable future presents the outcomes of the integrate project a community effort funded by the national science foundation to improve earth literacy and build a workforce prepared to tackle environmental and resource issues the integrate community is built around the shared goal of supporting interdisciplinary learning about earth across the undergraduate curriculum focusing on the grand challenges facing society and the important role that the geosciences play in addressing these grand challenges the chapters in this book explicitly illustrate the intimate relationship between geoscience and sustainability that is often opaque to students the authors of these chapters are faculty members administrators program directors and researchers from institutions across the country who have collectively envisioned implemented and evaluated effective change in their classrooms programs institutions and beyond this book provides guidance to anyone interested in implementing change on scales ranging from a single course to an entire program by infusing sustainability across the curriculum broadening access to earth and environmental sciences and assessing the

of illustrations and tables that will help gaining knowledge and understanding of a p the practice quizzes for the lecture modules are a good tool for self assessment before exams the newly created appendix contains a glossary of commonly used adjectives prefixes and suffixes as well as the answer keys for the practice quizzes the core of part 2 is the combination of 25 lab modules and related labeling exercise modules for the 2nd edition the authors revised some illustrations and added more than 20 new illustrations with a focus on the dissection activities in both a p i and ii lab sessions a new feature is the lab activity sheets at the end of the book by incorporating them into the lab workbook students can go over them before the lab sessions and thus be more prepared for the activities
