many controlled release veterinary drug delivery systems crvdds are presently in use and recently there has been a host of new crvdds within veterinary medicine the challenges of this area of drug delivery arise from the unique anatomy and physiology of the target animal the cost constraints associated with the value of the animal being treated and the extended periods of time that delivery must be sustained for often measured in months the purpose of this book is to introduce the reader to the unique opportunities and challenges of the field of crvdds and to explain and discuss the basic controlled release principles underlying the development of crvdds its aim is to provide an overview of many of the areas where crvdds have application and to highlight the opportunities and prospects for controlled release technology in the veterinary field controlled release veterinary drug delivery comprises chapters that provide workers in the field and those interested in this area with information on the design development and assessment of a variety of crvdds the book contains chapters that describe the relevant animal physiological and anatomical considerations alongside descriptions of current and emerging controlled release delivery systems for a variety of routes for drug delivery and present overviews on the physical and chemical assessment of veterinary controlled release delivery systems the veterinary area is abound with opportunities for the development of controlled release drug delivery technologies it is an area of medicine that is open to the acceptance of novel drug delivery devices and which readily encompasses the use of novel routes of administration it is an area of many unmet needs most of which offer opportunities and unique challenges for the innovative formulation scientist to provide solutions this book will provide an insight into the biological clinical and pharmaceutical challenges that face the formulation scientist in this interesting and diverse area of research

this book explains the concept framework implementation and evaluation of controlled document authoring in this age of translation technologies machine translation mt is routinely used in many situations by companies governments and individuals despite recent advances mt tools are still known to be imperfect sometimes producing critical errors to enhance the performance of mt researchers and language practitioners have developed controlled languages that impose restrictions on the form or length of the source language text however a fundamental persisting problem is that both current mt systems and controlled languages deal only with the sentence as the unit of processing to be effective controlled languages must be contextualised at the document level consequently enabling mt to generate outputs appropriate for their functional context within the target document with a specific focus on japanese municipal documents this book establishes a framework for controlled document authoring by integrating various research strands including document formalisation controlled language and terminology management it then presents the development and evaluation of an authoring support system mutual that is designed to help non professional writers create well organised documents that are both readable and translatable the book provides useful insights for researchers and practitioners interested in translation technology technical writing and natural language processing applications chapter 1 the preface and bibliography of this book are freely available as downloadable open access pdfs at taylorfrancis com under a creative commons attribution non commercial no derivatives cc by nc nd 4 0 license

when we were setting the theme of infection control dilemmas and practical solutions for this symposium we asked ourselves a basic question what are some of the most vexing problems and situations facing the hospital microbiologist epidemiologist team in today s world of opportunistic and new infectious diseases unheard of as common pathogenic occurrences 10 years ago one of the areas which we immediately focused upon was the tremendous amount of time energy and financial resources that are presently being expended to satisfy the requirements mandated by the recognition of the danger of spread of blood borne pathogens in the hospital environment with the advent of universal precautions primarily in response to hiv infection and the aids crisis but certainly augmented by the increased incidence of hepatitis in its various forms a significant effort has been required to meet the standards recommended and or required by osha and the cdc with this in mind we brought together experts in the field of infectious diseases to address the problems engendered by the threat of nosocomial spread of selected pathogens further we devoted several sessions to discussing the investigation and resolution of institutional outbreaks of disease particularly with reference to methicillin resistant staphylo

coccus aureus mrsa special problems of dental offices and clinical teaching as well as extended care facilities were also selected for attention particularly with relation to blood borne pathogens
