Exposure and body burden of environmental pollution and risk of cancer in a historically contaminated areas 2019-10-17

there are many villages where environmental contamination is substantial due to historical industrial activities according to the european environment agency there are about 2 5 million potentially contaminated sites in the european member states in sweden there are about 80 000 more or less contaminated areas about 1000 of them are classified into the highest risk category hazard class 1 and should be remediated population exposure due to these industrially contaminated sites may contribute to adverse health effects and is a global environmental problem the general aim of this thesis was to evaluate the occurrence of cancer in populations residing in contaminated areas in relation to indirect exposure via the long term consumption of locally produced food taking into account residential occupational and lifestyle factors associations between reported local food consumption frequencies biomarker concentrations and environmental and lifestyle factors were explored the swedish national cancer registers and questionnaire information was used to identify cancer risk groups in the study population the questionnaire was evaluated regarding how well it reflected measured levels of biomarkers in human biological samples and how the consumption of local food from contaminated areas contributed to the total body burden of contaminants despite historically high environmental levels of contaminants in the soil and sediments current contaminant exposure in the studied population living in the contaminated areas was similar to or only moderately higher than that of the general population no significant associations with increased cancer risk were detected in the highest tertile of metals concentrations in blood or pah in urine reported long term high consumption of certain local foods was associated with higher cadmium vegetarian food and lead fish meat concentrations in blood and urine long term high consumption of non local food from places outside the study areas was not associated with increased concentrations of metals compared with consumers of locally produced food it was concluded that the questionnaire information on consumption of locally produced food describes differences in food consumption between the study population reasonably well an increased risk of cancer was associated with smoking family history of cancer and obesity residing in

~~jaffe cataract surgery and complications download free ebooks about jaffe cataract surgery and complications or read online~~
~~a contaminated area during the first five years of life was associated~~
with an increased risk of cancer which may indicate exposure to contaminants in early life also long term high consumption of particular local foods fish chicken lamb game meat was associated with an increased risk of various forms of cancer while reported high consumption of these foods from non local sources was not associated with increased risk of cancer the associations between habitual consumption of local food and different types of cancer may reflect a higher exposure in the past and thus if consumption of local food contributes to the risk of acquiring cancer that contribution is probably lower today than previously furthermore it cannot be ruled out that other contaminants in the food contribute to the increased cancer risks observed in conclusion the questionnaire that was developed for the present thesis can identify risk groups within populations and can be used as a tool in a health risk assessment

Advances in Telemedicine 2011-03-16

innovative developments in information and communication technologies ict irrevocably change our lives and enable new possibilities for society telemedicine which can be defined as novel ict enabled medical services that help to overcome classical barriers in space and time definitely profits from this trend through telemedicine patients can access medical expertise that may not be available at the patient s site telemedicine services can range from simply sending a fax message to a colleague to the use of broadband networks with multimodal video and data streaming for second opinioning as well as medical telepresence telemedicine is more and more evolving into a multidisciplinary approach this book project advances in telemedicine has been conceived to reflect this broad view and therefore has been split into two volumes each covering specific themes volume 1 technologies enabling factors and scenarios volume 2 applications in various medical disciplines and geographical regions the current volume 1 is structured into the following thematic sections fundamental technologies applied technologies enabling factors scenarios

Making Sense of Near-death Experiences 2012

a near death experience nde is a phenomenon whereby powerful physical and emotional sensations and visions are experienced by someone who is either close to death or has been declared clinically dead this is a guide to the theory and evidence underlying the phenomenon of ndes

Introduction to Air Pollution Science 2013

this unique textbook examines the basic health and environmental issues associated with air pollution including the relevant toxicology and epidemiology it provides a foundation for the sampling and analysis of air pollutants as well as an understanding of international air quality regulations written for upper level undergraduate and introductory graduate courses in air pollution the book is also a valuable desk reference for practicing professionals who need to have a broad understanding of the topic key features provides the most up to date coverage of the basic health and environmental issues associated with air pollution offers a broader examination of air pollution topics beyond just the meteorological and engineering aspects of air pollution and includes the following instructor resources instructor s manual

Addictions and Native Americans 2000-01-30

substance abuse is a major health and social problem plaguing native
americans both historically and today after presenting the social and
psychological factors that have contributed to native american
addictions and the patterns of behavior and circumstances associated
with this complex and widespread problem french discusses the treatment
intervention and prevention issues facing therapists he also explores
the development and consequences of a new form of addiction compulsive
gambling focusing on its relationship to substance abuse a major
contribution of this volume is its review and critique of regulatory
acts documenting federal policy

Professional Practice for Foundation Doctors 2011-07-01

this book is designed to support trainee doctors during the foundation
stage of postgraduate training including preparation and application for
specialty training posts and covers the generic non clinical aspects of
postgraduate education training and professional development it shows
trainees how the generic skills fit into professional practice and
development and how the knowledge base provided by the book underpins
professional practice the book will assist the development of the
knowledge skills and competences required for good medical practice and
uses case studies activities and policy examples to illustrate key
learning points

The Handbook of Child and Adolescent Clinical Psychology 2013-01-11

pokok pokok bahasan dalam buku ini mencakup 1 prinsip dasar epidemiologi gizi 2 konsep penyebab penyakit 3 epidemiologi gizi deskriptif 4 ukuran frekuensi epidemiologi 5 epidemiologi gizi analitik 6 causal inference dalam penelitian gizi 7 surveilans gizi 8 riwayat alamiah penyakit dan 9 studi kasus kontrol

RStudio 2018-07-13

con frecuencia los alumnos de pregrado y postgrado de las carreras de la salud se involucran en actividades de investigación sin tener mayores conocimientos sobre cómo hacerlo la familiarización precoz del alumno con la filosofía y conceptos propios de las metodologías de investigación clínica y epidemiológica es un hecho deseable pues les permite maximizar los beneficios a obtener producto de su experiencia como integrantes de un equipo de investigación el presente libro pretende transformarse en una herramienta que permita a los alumnos de manera simple y didáctica adquirir sus primeros conocimientos en metodologías de investigación clínica y epidemiológica a lo largo de sus capítulos el lector podrá aprender los conceptos fundamentales subyacentes a toda investigación y acceder a numerosa bibliografía
