building with glass from the history through the technical foundations all the way to the most innovative applications astonishing perspectives on thermal insulation and solar protection and the addition of thoughtfully selected new practical examples round off this comprehensive reference work the roof construction manual is a comprehensive reference work on the construction of pitched roofs containing over 1800 plans and 220 photographs thirteen fundamental roof types and the relevant materials including thatch wood slate tile concrete fibrous cement bitumen glass metal membranes and synthetic materials are documented in detail essential topics such as ventilation vapour and wind seals insulation and drainage renovation and energy conservation are examined as with all the construction manuals some 38 built examples illustrate the theoretical details paying particular attention to important features such as the ridge hip eaves roof valley verge and penetration a compact presentation of the load bearing physics and structures as well as current norms and standards make this volume an indispensable standard work for all architects and engineers soccer stadiums airports theaters museums it falls to very few architects to tackle spectacular building tasks like these the everyday work of most architects is more often focused on manageable projects like the renovation remodeling or rebuilding of single and multi family houses schools and offices whatever the nature of the building task interior construction is always a significant design and qualitative challenge that calls for highly detailed technical expertise after all it affects the realm that will be brought to life and utilized by the user when the task is finished and whose aesthetic and functional serviceability will be put to the test each and every day the interior construction manual supports planners in their daily work as a practical planning aid and reference work with the relevant standards guidelines reference details and constructional solutions all illustrated by built example projects it brings together the crucial facts on all aspects of interior construction and presents the key fundamentals of building physics fire protection interior construction systems and openings in addition it offers concrete tips on integrated planning approaches energy and sustainability issues materials used in interior construction hazardous substances and dealing with building services and light planning

the manual addresses fundamental questions of sustainability including life span environmental impact and material cycles while also presenting material innovations all of the principal conventional and innovative construction materials are documented with attention to their production treatment surfaces connections and characteristics

deals with the various forms of opening such as doors windows ventilation elements and fixed glass panes and their materialization which also varies according to function special attention is give to the subject of edges

when looking for appropriate building solutions in tropical and subtropical regions the chief aim is saving energy and reducing pollutant emissions as much as possible natural ventilation passive and active use of solar energy use of rainwater and also the energy potential of the soil are the key issues here traditional urban and building structures described in an exemplary fashion by local architects for a wide variety of locations provide a stimulus for thinking about positive elements developed by master builders of the past as well alongside all the technical possibilities that exist today the external facades of a building are more than a protective mantle or an intelligent skin regulating temperature and light they also determine its very appearance by unusual choices of materials and the use of complex technology facades have become increasingly significant in recent years external surfaces are being

perceived as an integral part of the building and are therefore being designed as such this volume focuses on the wide ranging aspects of facade design from the selection and use of materials to the advanced technical possibilities now open to the architect a wide array of carefully selected international examples show the theory in the practice all plans details and large scale sections of the facades have been researched with the high degree of competence typical of the editorial staff from the review detail expert authors provide the essential information needed to plan and design facades and elucidate on the latest developments in technology and materials vols 9 17 include decisions of the war labor board □□□□□□□□□□ □□□□□□□□□□□□ □□ □□□□□□□□□□ □□□□□□ □□□□□□□□□□□□□□□□ in detail single family housing presents fifteen international examples reviewing the most important aspects of construction including the use of wood steel brickwork and concrete which have all become established materials for this type of building all plans and details from the base to the roof have been painstakingly researched and the uniform presentation makes the information immediately accessible inviting comparison and analysis the authors provide explanatory introductions to the fundamental aspects of planning from the design of the floorplans to the realization and they set this type of building within the context of the 20th century pointing towards the potential developments of the single family house
