excerpt from treatment of disease in children including the outlines of diagnosis and the chief pathological differences between children and adults it has been my endeavour to prepare for the senior student and practitioner a concise but complete manual of the treatment of disease in children i have made one assumption that the reader is already acquainted with a work on general medicine i should like to have reflected a picture of all contemporary treatment of disease in children this was my original intention but the material accumulated apace and a volume of vast dimensions would have been required instead i have endeavoured to give what i thought best to present a coordinate microcosm for the incoordinate chaos all through the book i have emphasized that treatment i am accustomed to adopt the alpha and omega of all rational treatment is precise diagnosis it is rare that in treatment our indiscretion serveth us better than our judgment the outlines of diagnosis are given but diagnosis is a matter of practical clinical skill and sagacity hardly to be acquired from books about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Essentials of Diagnosis & Treatment in Emergency Medicine 2005-03-11

excerpt from medical diagnosis a manual of clinical methods it is a creditable characteristic of the treatment of disease in the present day that it seeks to proceed on rational principles some there may still be who think it enough to give a name to a collective group of symptoms and treat the disease as they have been told an affection bearing that name should be treated there may be others who seize upon a few prominent symptoms and direct their remedies exclusively to these but every day is happily reducing the number of these routine practitioners and teaching that the true physician is he who seeks thoroughly to investigate the phenomena of the disease that in this way he may the better arrive at a knowledge of that from which they proceed and to which therefore his treatment should be directed but this can only be arrived at by a thorough knowledge of every change which disease produces in the body and by a clear conception of what that change imports this constitutes the science of diagnosis and without accurate diagnosis there can be no rational treatment the signs and symptoms of disease are changes produced in the animal economy which are cognoscible by our senses some by one others by another while to assist these senses we call in the aid of instruments which extend their range or increase their power and of the various analytical processes which the science of chemistry places at our disposal in the following pages an attempt has been made to describe these signs and symptoms of disease and to show what is their value from a diagnostic point of view about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

disturbances of iron metabolism particularly iron deficiency are among the most commonly overlooked or misinterpreted diseases this is due to the fact that the determination of transport iron in serum or plasma which used to be the test in conventional diagnosis does not allow a representative estimate of the body s total iron reserves a proper estimate was formerly possible only by the costly and invasive determination of storage iron in the bone marrow however sensitive well standardized immuno chemical methods for the precise determination of the iron storage protein ferritin in plasma are now available since the secretion of this protein correctly reflects the iron stores in the majority of cases these methods permit fast and reliable diagnosis particularly of iron deficiency conditions the fact that iron deficiency is so common and is usually simple to treat ought to be well known in the medical world even non iron determined causes of anemia can now be identified rapidly by highly sensitive well standardized immuno chemical methods this book is intended to contribute to a better understanding of the main pathophysiological foundations and diagnostic principles
