Statement of Additional Or Enlarged Programs in Accordance with Requirements Committee Document No. 2021-C. 1996 1 theme and focus few books are available to integrate the models for facilities siting transportation and land use employing state of the art quantitative models and case studies this book would guide the siting of such facilities as transportation terminals warehouses nuclear power plants military bases landfills emergency shelters state parks and industrial plants the book also shows the use of statistical tools for forecasting and analyzing implications of land use decisions the idea is that land use on a map is necessarily a consequence of individual and often conflicting siting decisions over time since facilities often develop to form a community these decisions are interrelated spatially i.e. they need to be accessible to one another via the transportation system it is our thesis that a common methodological procedure exists to analyze all these spatial temporal constructs while there are several monographs and texts on subjects related to this book this volume is unique in that it integrates existing practical and theoretical works on facility location transportation and land use instead of dealing with individual facility location transportation or the resulting land use pattern individually it provides the underlying principles that are behind these types of models particularly of interest is the emphasis on counter intuitive decisions that often escape our minds unless deliberate steps of analysis are taken oriented toward the fundamental principles of infrastructure management the book transcends the traditional engineering and planning disciplines where the main concerns are often exclusively either physical design fiscal socioeconomic or political considerations
