it is essential for today s students to learn about science and engineering in order to make sense of the world around them and participate as informed members of a democratic society the skills and ways of thinking that are developed and honed through engaging in scientific and engineering endeavors can be used to engage with evidence in making personal decisions to participate responsibly in civic life and to improve and maintain the health of the environment as well as to prepare for careers that use science and technology the majority of americans learn most of what they know about science and engineering as middle and high school students during these years of rapid change for students knowledge attitudes and interests they can be engaged in learning science and engineering through schoolwork that piques their curiosity about the phenomena around them in ways that are relevant to their local surroundings and to their culture many decades of education research provide strong evidence for effective practices in teaching and learning of science and engineering one of the effective practices that helps students learn is to engage in science investigation and engineering design broad implementation of science investigation and engineering design and other evidence based practices in middle and high schools can help address present day and future national challenges including broadening access to science and engineering for communities who have traditionally been underrepresented and improving students educational and life experiences science and engineering for grades 6 12 investigation and design at the center revisits america s lab report investigations in high school science in order to consider its discussion of laboratory experiences and teacher and school readiness in an updated context it considers how to engage today s middle and high school students in doing science and engineering through an analysis of evidence and examples this report provides guidance for teachers administrators creators of instructional resources and leaders in teacher professional learning on how to support students as they make sense of phenomena gather and analyze data information construct explanations and design solutions and communicate reasoning to self and others during science investigation and engineering design it also provides guidance to help educators get started with designing

implementing and assessing investigation and design

students learn by doing science investigation and engineering design provide an opportunity for students to do when students engage in science investigation and engineering design they are able to engage deeply with phenomena as they ask questions collect and analyze data generate and utilize evidence and develop models to support explanations and solutions research studies demonstrate that deeper engagement leads to stronger conceptual understandings of science content than what is demonstrated through more

traditional memorization intensive approaches investigations provide the evidence student need to construct explanations for the causes of phenomena constructing understanding by actively engaging in investigation and design also creates meaningful and memorable learning experiences for all students these experiences pique students curiosity and lead to greater interest and identity in science preface
