

Epub free Kcse computer project guideline (Download Only)

project guideline is an early stage research project exploring how google ai can help people with visual impairments run freely by themselves in japan around 60 percent of the population exercises routinely however that number drops to around 30 percent amongst people with visual impairments

project guideline is a research project that leverages on device ml to enable people who are blind and low vision to walk or run for exercise independently the project aims to help people move freely and independently in the physical world learn more about the project in our blog post and youtube video

project guideline uses android s built in camera 2 and mlkit apis and adds custom modules to segment the guideline detect its position and orientation filter false signals and send a stereo audio signal to the user in real time

today we announce the open source release of project guideline making it available for anyone to use to improve upon and build new

accessibility experiences the release includes source code for the core platform an android application pre trained ml models and a 3d simulation framework

population exercises routinely however that number drops to around 30 percent amongst people with visual impairments
