## **What Explains the Decline of the U.S. Labor Share of Income? An Analysis of State and Industry Level Data**

2017-07-24

the u s labor share of income has been on a secular downward trajectory since the beginning of the new millennium using data that are disaggregated across both state and industry we show the decline in the labor share is broad based but the extent of the fall varies greatly exploiting a new data set on the task characteristics of occupations the u s input output tables and the current population survey we find that in addition to changes in labor institutions technological change and different forms of trade integration lowered the labor share in particular the fall was largest on average in industries that saw a high initial intensity of routinizable occupations steep declines in unionization a high level of competition from imports and a high intensity of foreign input usage quantitatively we find that the bulk of the effect comes from changes in technology that are linked to the automation of routine tasks followed by trade globalization

## **Decline of the Steller Sea Lion in Alaskan Waters**

2003-04-04

for an unknown reason the steller sea lion population in alaska has declined by 80 over the past three decades in 2001 the national research council began a study to assess the many hypotheses proposed to explain the sea lion decline including insufficient food due to fishing or the late 1970s climate regime shift a disease epidemic pollution illegal shooting subsistence harvest and predation by killer whales or sharks the report s analysis indicates that the population decline cannot be explained only by a decreased availability of food hence other factors such as predation and illegal shooting deserve further study the report recommends a management strategy that could help determine the impact of fisheries on sea lion survival establishing open and closed fishing areas around sea lion rookeries this strategy would allow researchers to study sea lions in relatively controlled contrasting environments experimental area closures will help fill some short term data gaps but long term monitoring will be required to understand why sea lions are at a fraction of their former abundance

2020-12-01

this book examines the relationship that prevails between the state and freedom in the works of milton friedman and friedrich hayek as well as those of some of their peers including gary becker james buchanan and george stigler the author explains that their concept of freedom was largely derived from the principles and values of neo liberalism however she maintains that neo liberals never cared about providing the masses with genuine freedom rather they value freedom for its instrumental value in terms of facilitating the global spread of free market capitalism the author explains that the neo liberal concept of freedom has been a very useful tool in promoting the superiority of free market capitalism over centrally planned economies aimed at achieving the common good she argues that even though neo liberals are strongly opposed to central planning they are tolerant of state planning intended to help establish and sustain the conditions of a free market system she also contends that the extensive implementation of neo liberal reforms and policies has led to states losing their

sovereignty and moving away from their traditional role of achieving the common good the author claims that the world has essentially become the sum of many neo liberal societies particularly during the last four decades she also maintains that throughout human history no other ideology school of thought political religious or military institution kingdom or empire has been as successful as neo liberalism when it comes to shaping people s beliefs ideals goals and lifestyle on a global scale unfortunately neo liberalism has proven to be very detrimental for civilization and the future of the planet the author concludes that the widespread adoption of the neo liberal concept of freedom in combination with the pretense that economics is a natural ahistorical and value free science has triggered the emergence of methodological monism which has resulted in unfreedom and the poverty of economics while also delaying the progress of the entire discipline

what is a love feast how did the early church celebrate the love feast how might christians today celebrate the love feast in recovering the love feast paul stutzman addresses these questions offering a unique blend of liturgical history and practical theology part i outlines the history of the love feast noting its prevalence in early church worship its gradual decline and its reemergence in the practices of several pietist groups e g the moravians methodists and brethren particular focus is given to five elements of the celebration that is eucharistic preparation feetwashing the fellowship meal the holy kiss and the eucharist proper in part ii stutzman argues that the love feast is a valuable christian practice and a celebration worth recovering in those traditions that may have forgotten the feast rather than prescribing a specific method for celebrating the love feast stutzman proposes that there are five key disciplines that today s love feasts should embody submission love confession reconciliation and thanksgiving this book encourages christians from a range of traditions to experiment with reclaiming the love feast with the hope that each celebration serves as an act of worship to god and an authentic expression of christian discipleship

between 1977 and 1997 there was a precipitous decline in the proportion of us workers with median education 12 years or less who were represented by a labor union from 29 to 14 percent the unionization proportion declined much less among workers with above median education 19 to 13 percent the union wage premium also declined for workers with basic education from 58 to 51 percent whereas it rose slightly for better educated unionists from 18 to 19 percent thus whatever safety net american unions provide was disproportionately lost by the less educated workers who arguably need it the most in this study robert e baldwin investigates the role of changes in us imports and exports in explaining this dramatic decline the main analysis which includes workers in manufacturing as well as service sectors relates changes in the number of union workers across industries to changes in domestic spending imports exports and the intensity with which labor is used across these industries for both union and nonunion workers baldwin finds that although globalization i e increased trade seems to have contributed only modestly to the general decline in unionization it has more importantly contributed to the decline in unionization among workers with less education the study concludes with a discussion on the implication of this and the other findings for governmental policy and for the policy position of unions toward globalization

## **The Decline of US Labor Unions and the Role of Trade**

2003-06-05

this book explores the political trajectory of latin america s most important contemporary labor movement the new unionism played a central role in brazil s struggle for democracy in the 1980s and recast the country s subsequent party politics through its creation of the innovative workers party pt the author breaks new ground by analyzing this celebrated prototype of social movement unionism as a heterogeneous alliance of component factions that evolves in relation to shifting economic political and ideological contexts through the prism of internal politics he shows how brazil s transitions from military authoritarian to liberal democratic rule from statist to free market economic policies and from a leninist to a post leninist left undermined the independent labor movement s commitments to internal democracy political autonomy and societal transformation the book concludes with a comparative assessment of brazilian south african and south korean social movement unionisms shared dilemmas arguing that an adequate understanding of their relative declines demands more

jeffrey kopstein offers the first comprehensive study of east german economic policy over the course of the state s forty year history analyzing both the making of economic policy at the national level and the implementation of specific policies on the shop floor he provides new and essential background to the revolution of 1989 in particular he shows how decisions made at critical junctures in east germany s history led to a pattern of economic decline and worker dissatisfaction that contributed to eventual political collapse east germany was generally considered to have the most successful economy in the eastern bloc but kopstein explores what prevented the country s leaders from responding effectively to pressing economic problems he depicts a regime caught between the demands of a disaffected working class whose support was crucial to continued political stability an intractable bureaucracy an intolerant but surprisingly weak soviet patron state and a harsh international economic climate rather than pushing for genuine economic change the east german communist party

the public journalists and legislators themselves have often lamented a decline in congressional lawmaking in recent years often blaming party politics for the lack of legislative output in committees and the decline of lawmaking in congress jonathan lewallen examines the decline in lawmaking from a new committee centered perspective lewallen tests his theory against other explanations such as partisanship and an increased demand for oversight with multiple empirical tests and traces shifts in policy activity by policy area using the policy agendas project coding scheme he finds that because party leaders have more control over the legislative agenda committees have spent more of their time conducting oversight instead partisanship alone does not explain this trend changes in institutional rules and practices that empowered party leaders have created more uncertainty for committees and contributed to a shift in their policy activities the shift toward oversight at the committee level combined with party leader control over the voting agenda means that many members of congress are effectively cut out of many of the institution s policy decisions at a time when many including congress itself are considering changes to modernize the institution and keep up with a stronger executive branch the findings here suggest that strengthening congress will require more than running different candidates or providing additional resources

an analysis of the welfare state from a political economy perspective that examines the effects of aging populations migration and globalization on industrialized economies in the decline of the welfare state assaf razin and efraim sadka use a political economy framework to analyze the effects of aging populations migration and globalization on the deteriorating system of financing welfare state benefits as we know them their timely analysis supported by a unified theoretical framework and empirical findings demonstrates how the combined forces of demographic change and globalization will make it impossible for the welfare state to maintain itself on its present scale in much of the developed world the proportion of the population aged 60 and over is expected to rise dramatically over the coming years from 35 percent in 2000 to a projected 66 percent in 2050 in the european union and from 27 percent to 47 percent in the united states which may necessitate higher tax burdens and greater public debt to maintain national pension systems at current levels low skill migration produces additional strains on welfare state financing because such migrants typically receive benefits that exceed what they pay in taxes higher capital taxation which could potentially be used to finance welfare benefits is made unlikely by international tax competition brought about by globalization of the capital market applying a political economy model and drawing on empirical data from the eu and the united states the authors draw an unconventional and provocative conclusion from these developments they argue that the political pressure from both aging and migrant populations indirectly generates political processes that favor trimming rather than expanding the welfare state the combined pressures of aging migration and globalization will shift the balance of political power and generate public support from the majority of the voting population for cutting back traditional welfare state benefits
