historical overviews and homeowner stories all in a trusted authoritative voice the research deals with a question about architecture and its design strategies combining historical information and digital tools design strategies are historically defined they rely on geometry context building technologies and other factors the study of architecture s own history particularly in the verge of technological advancements like the introduction of new materials or tools may shed some light on how to internalize digital tools like parametric design and digital fabrication old house journal is the original magazine devoted to restoring and preserving old houses for more than 35 years our mission has been to help old house owners repair restore update and decorate buildings of every age and architectural style each issue explores hands on restoration techniques practical architectural guidelines historical overviews and homeowner stories all in a trusted authoritative voice old house journal is the original magazine devoted to restoring and preserving old houses for more than 35 years our mission has been to help old house owners

7 1 1 background uncertainty can be considered as the lack of adequate information to make a decision it is important to quantify uncertainties in mathematical models used for design and optimization of nondeterministic engineering systems in general certainty can

be broadly classified into three types bae et al 2004 ha rok

2004 klir and wierman 1998 oberkampf and helton 2002

sentz 2002 the rst one is aleatory uncertainty also referred to as stochastic uncertainty or inherent certainty it results from the fact that a system can behave in random ways for example the failure of an engine can be modeled as an aleatory uncertainty because the failure can occur at a random time one cannot predict exactly when the engine will fail even if a large quantity of failure data is gathered available the second one is epistemic uncertainty also known as subjective uncertainty or reducible certainty it is the uncertainty of the outcome of some random event due to lack of knowledge or information in any phase or activity of the modeling process by gaining information about the system or environmental factors one can reduce the epistemic uncertainty for example a lack of experimental data to characterize new materials and processes leads to epistemic uncertainty old house journal is the original magazine devoted to restoring and preserving old houses for more than
