practical problemsolving areas namely the hand wrist elbow shoulder hip knee ankle and foot and spine and special problems in children internal fixation including intramedullary nailing and the use of external fixation are described compound fractures are everyday problems and the principles of their management and practical solutions deserve separate discussion the value of microsurgical techniques has been underestimated by orthopaedic experts and the indications choices and procedures need to be put into proper perspectives

## **Practical Fracture Treatment 1981**

there are many textbooks on fractures in adults but few deal with those in children and young persons publications on fractures in children are usually written by orthopedic surgeons who are familiar with the problems presented by the growing skeleton the principles taught in the best known works on fractures in children by blount 1954 rettig 1957 chigot and esteve 1957 ehalt 1960 pollen 1973 and rang 1974 differ from each other only slightly the controversy which has surrounded the treatment of fractures in adults in recent years has never extended to childrens fractures skillful nonoperative treatment of the latter leads to uneventful healing in the majority of cases which cannot always be said of similar injuries in adults considerable skill is required to induce nonunion in a child and its occurrence always results from a serious error of management in the adult prolonged immobilization frequently leads to muscle atrophy joint stiffness and disturbances of the peripheral innervation and circulation fracture treatment by internal fixation in the manner originally described by lane 1894 lambotte 1892 1907 1913 konig 1905 1931 and danis 1932 1949 has gained wide

acceptance only in the last 15 years since 1958 muller allgower wil lenegger and the other members of the swiss association for the study of internal fixation asif have been developing techniques and instruments for the operative treatment of fractures

## **Current Practice of Fracture**

### **Treatment 2012-12-06**

fracture management for primary care provides the guidance you need to evaluate and treat common fractures as well as identify uncommon fractures that should be referred to a specialist drs m patrice eiff and robert hatch emphasize the current best guidelines for imaging and treating fractures so that you can make accurate identifications and select appropriate treatment detailed descriptions and illustrations combined with evidence based coverage give you the confidence you need to make the right decisions online access to procedural videos and patient handouts at expertconsult com make this quick practical resource even more convenient for primary care clinicians who manage fractures access the information you need the way you need it with a template format for presenting each type of fracture diagnose fractures accurately with the many high quality images clearly see the anatomic relationships of bones and joints through schematic illustrations reference key information quickly and easily thanks to one page management tables that summarize pertinent aspects of diagnosis and treatment treat displaced fractures using detailed step by step descriptions of the most common reduction techniques access the fully searchable text online at expertconsult com along with video clips of reduction maneuvers and

downloadable patient education and rehabilitation  
instruction handouts accurately identify fractures using  
optimal imaging guidelines apply splints and casts with  
confidence thanks to detailed descriptions and illustrations  
of technique tap into the latest best practices through  
more evidence based coverage and updated references  
effectively manage emergency situations using guidelines  
for emergent referral greater detail regarding methods for  
closed reductions for fractures and dislocations and more
